Volume 1

Preface *xv*

1 ISC-Based Fe–S Protein Biogenesis in Bacteria *1*
Béatrice Py and Frédéric Barras
Chapter Goals *1*
Main Chapter Points *1*
1.1 Introduction *1*
1.2 Discovery of the ISC Fe–S Protein Biogenesis Machinery *4*
1.3 Assessing the Importance of the Individual ISC Components *5*
1.4 The Fe–S Cluster *de novo* Assembly Step *8*
1.5 The Fe–S Cluster Delivery Step *11*
1.6 Regulation of the ISC Machinery *12*
1.7 Distribution and Evolution of the ISC Machinery *14*
1.8 Conclusion *15*
Acknowledgments *15*
References *16*

2 Unraveling the Complexity of the Suf-Based Fe–S Biogenesis *25*
Ingie Elchennawi, Claire E. Fisher, Franklin Wayne Outten, and Ollagnier de Choudens Sandrine
Chapter Goals *25*
Main Chapter Points *26*
2.1 Introduction *26*
2.2 Suf Function: The Sulfur Delivery Step *28*
2.2.1 The SufS Cysteine Desulfurase *28*
2.2.2 SufU and SufE Sulfur Transfer Partners *30*
2.2.3 Is a Cysteine Desulfurase Always Needed? Organisms That Lack SufS *35*
2.3 Suf Function: Fe–S Cluster Assembly on the Scaffold *35*
2.3.1 The SufB Scaffold *35*

Bibliografische Informationen
http://d-nb.info/1350212156

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.3.2 SufC and SufD Scaffold Partners *36*
2.3.3 The Minimal Suf Scaffold, SMS *37*
2.3.4 Iron Acquisition and Fe–S Cluster Binding *37*
2.3.5 The Redox Flavin Cofactor *38*
2.4 Suf Function: Fe–S Cluster Trafficking *39*
2.4.1 The A-Type Carrier SufA *39*
2.4.2 SufT and DUF59 Proteins *41*
2.5 Suf Regulation *42*
2.5.1 Stress-Responsive Suf Regulation in Bacteria *43*
2.5.2 SufR and RisR Regulation of Suf *44*
2.5.3 SufB Intein Splicing *45*
2.6 Conclusions and Future Directions *45*
Acknowledgments *46*
References *46*

3 Biogenesis of Mitochondrial Iron–Sulfur Proteins *57*
Ulrich Mühlenhoff, Oliver Stehling, and Roland Lill
Chapter Goals *57*
Main Chapter Points *57*
3.1 Introduction *57*
3.2 Cellular Roles of Eukaryotic Fe–S Proteins *58*
3.3 Components and Mechanism of the Mitochondrial ISC System *62*
3.3.1 Overview *62*
3.3.2 Step 1: *De novo* [2Fe–2S] Cluster Formation on the Core ISC Complex *64*
3.3.3 Step 2: Chaperone-Dependent Transfer of the ISCU2-Bound Cluster to [2Fe–2S] Apoproteins *69*
3.3.4 Step 3: Reductive Fusion of [2Fe–2S] Clusters on the Late ISC Complex Generates [4Fe–4S] Clusters for Insertion into Mitochondrial Apoproteins *71*
3.4 Conclusions and Outlook *74*
Acknowledgments *75*
References *75*

4 Iron–Sulfur Protein Maturation in the Cytosol of Eukaryotes *87*
Joseph J. Braymer and Antonio J. Pierik
Chapter Goals *87*
Main Chapter Points *87*
4.1 Introduction *87*
4.2 Methodology and Challenges of Assigning Cytosolic Fe–S Proteins *95*
4.3 [2Fe–2S] Protein Assembly in the Cytosol and the Early CIA Machinery *99*
4.3.1 Export of X-S from Mitochondria and Essential GSH Requirement in Fe–S Biogenesis *99*

4.3.2 [2Fe–2S] Clusters in Yeast Iron Homeostasis and [2Fe–2S] Chaperones *100*
4.3.3 [2Fe–2S] Target Proteins *102*
4.3.4 The Early CIA and Involvement of [2Fe–2S] Clusters in [4Fe–4S] Cluster Biogenesis *103*
4.4 [2Fe–2S] and [4Fe–4S] Protein Assembly at the Late CIA Machinery *105*
4.4.1 Nar1: Between the Early CIA and Late CIA Machinery *105*
4.4.2 The CTC *106*
4.4.3 Bipartite Recognition of Targets *109*
4.4.4 Potential [2Fe–2S] Cluster Insertion into Proteins at the CTC *113*
4.5 Relevance for Disease and for Biotechnology *115*
4.5.1 Diseases Related to Cytosolic and Nuclear Fe–S Proteins *115*
4.5.2 Diseases Related to Maturation of Cytosolic and Nuclear Fe–S Proteins *116*
4.5.3 Biotechnology *117*
References *118*

5 Mammalian Aldehyde Oxidase *135*
Maria Joao Romao, Guilherme Vilela-Alves, and Cristiano Mota
Chapter Goals *135*
Main Chapter Points *135*
5.1 Introduction *136*
5.2 The Xanthine Oxidase Family of Mononuclear Mo Enzymes *136*
5.2.1 The Fe–S Domain and Structural/Spectroscopic Assignment of the Iron–Sulfur Centers *138*
5.3 Aldehyde Oxidase Crystal Structure *139*
5.3.1 The Mammalian AOX Crystal Structures *139*
5.3.2 The Mo Active Site *141*
5.3.3 The [2Fe–2S] Clusters *145*
5.3.4 The FAD-Binding Site *146*
5.4 Aldehyde Oxidase and Its Role in Drug Metabolism *147*
5.4.1 Reactions Catalyzed by hAOX1 *148*
5.4.1.1 Oxidation of Aldehydes, N-aromatic Heterocycles, and Iminium Ions *148*
5.4.1.2 Reductions of Nitro, N-oxide, S-oxide, and Isothiazol Compounds *149*
5.4.1.3 Amide Hydrolysis Reactions *149*
5.4.2 Inhibition of hAOX1 Activity *149*
5.4.3 Single-Nucleotide Polymorphisms *150*
5.5 Conclusions *154*
List of Abbreviations *154*
References *154*

6 **Biological Formation of Sulfide** *159*
Marion Jespersen and Tristan Wagner
Chapter Goals *159*
Main Chapter Points *159*
6.1 Sulfur Is a Versatile Element and an Essential Cellular Component *161*
6.1.1 Chemical Properties of Sulfur *161*
6.1.2 Sulfur as an Essential Cellular Component *162*
6.1.3 Sulfur Bioavailability in the Environment *164*
6.2 A Sulfate-Reduction Metabolism to Obtain Cellular Sulfur: The Assimilatory Pathway *165*
6.2.1 Sulfate Is Activated by the ATP-Sulfurylase *165*
6.2.2 APS Is Further Phosphorylated by the APS-Kinase *167*
6.2.3 Sulfite Production and Hydrolysis of the Poisonous By-Product PAP *167*
6.2.4 Sulfite Reduction *168*
6.3 A Sulfate-Reduction Metabolism to Conserve Energy: The Dissimilatory Pathway *168*
6.3.1 Ecological Impact of the Dissimilatory Reduction of Sulfate and Its Bioenergetics *169*
6.3.2 Sulfate Capture and Activation *170*
6.3.3 A Catabolic APS-Reductase *170*
6.3.4 Sulfite Reduction Is Coupled to Energy Conservation *171*
6.3.5 Sulfur Assimilation and Dissimilatory Sulfate Reduction Are Potentially Uncoupled *172*
6.4 The Unconventional Sulfate-Reduction Pathway of *M. thermolithotrophicus* *172*
6.4.1 Methanogens and Sulfur *173*
6.4.2 *M. thermolithotrophicus* Exhibits Remarkable Growth on Sulfate *174*
6.4.3 A Conserved Sulfate Activation Mechanism Produces PAPS *174*
6.4.4 A Dissimilatory-Like PAPS-Reductase and a New PAP-Phosphatase *175*
6.4.5 A F_{420}-Dependent Sulfite Reductase Catalyzes the Last Step of the Pathway *177*
6.5 Evolution and Biotechnological Applications *178*
6.5.1 Fsr as a Structural Template for a Primordial Sulfite Reductase *179*
6.5.2 Sulfate Utilization as a Safer Route for Methanogenic Biotechnologies *180*
6.6 Conclusions *181*
References *181*

7 **The Molybdenum Cofactor, Its Biosynthesis, and Relation to Fe–S Clusters in Bacteria** *193*
Paolo Olivieri and Silke Leimkühler
Chapter Goals *193*
Main Chapter Points *193*
7.1 Molybdenum in Biology *193*

7.2 The Discovery of Molybdoenzymes: Studies of Mutant Strains from *Neurospora crassa* Show the Universality of the Molybdenum Cofactor *194*
7.3 Mutagenesis of Bacteria Help(s) to Discover Biosynthesis Pathways *194*
7.4 Chemical Investigation on the Structure of the Molybdenum Cofactor *196*
7.4.1 Identification of the First Intermediate, Precursor Z *198*
7.5 Moco Biosynthesis *199*
7.6 Differences in the Molybdenum Cofactor of Prokaryotes and Eukaryotes *202*
7.7 Discovery of the Sulfido Ligand *205*
7.8 The Role of Molybdoenzymes in *E. coli* *207*
7.9 Role of Fe–S Clusters for the Insertion of Moco into Molybdoenzymes *209*
7.10 The Reaction Catalyzed by Molybdoenzymes *211*
7.11 The Involvement of Fe–S Clusters in the Regulation of Bacterial Molybdoenzyme Expression *212*
7.12 Conclusions *213*
Acknowledgments *214*
References *214*

8 Molybdenum Cofactor Biosynthesis in Eukaryotes *227*
Guenter Schwarz, Lukas Flohr, Emanuel Bruckisch, and Katrin Fischer-Schrader
Chapter Goals *227*
Main Chapter Points *227*
8.1 Introduction *228*
8.2 Eukaryotic Molybdenum Enzymes *229*
8.3 Molybdenum Cofactor Biosynthesis – An Overview *231*
8.4 Synthesis of Cyclic Pyranopterin Monophosphate *233*
8.5 Thiolation of cPMP by Molybdopterin Synthase *236*
8.6 Molybdenum Insertion into Molybdopterin *239*
8.7 Deficiency of Moco *242*
8.8 The Intimate Relation Among Moco Synthesis, Moco Enzymes, and Fe–S Clusters *244*
References *245*

9 NifUS Is a Two-component Toolbox Involved in Assembling Fe–S Clusters Associated with Nitrogen Fixation and Beyond *257*
Julia S. Martin del Campo, Shervin Shaybani, Dennis R. Dean, and Patricia C. Dos Santos
Chapter Goals *257*
Main Chapter Points *257*
9.1 Introduction *258*

9.2 Structural and Catalytic Features of NifU *259*
9.2.1 NifU N′-Terminal Domain *259*
9.2.2 NifU Central Domain *261*
9.2.3 NifU C′-Terminal Domain *262*
9.3 Structural and Catalytic Features of NifS *263*
9.3.1 NifS Is a Cys:NifU Sulfurtransferase (EC 2.8.1.7) *265*
9.4 Synthesis of Fe–S Clusters by the NifUS System *267*
9.5 Dedicated Role of NifUS in Aerobic Nitrogen Fixation *269*
9.5.1 Direct Activation of Nitrogenase Reductase, NifH *271*
9.5.2 *Ex Situ* Assembly of the FeMo cofactor *272*
9.5.3 *In Situ* Assembly of P-cluster on NifDK *273*
9.5.4 Involvement of NifU and NifU-Like Proteins in the Synthesis of Metalloclusters for Vnf and Anf Nitrogenases *273*
9.5.5 Cross Talk Between NifUS and the Housekeeping IscUS System *274*
9.5.6 Inclusion of NifUS in Biotechnological Efforts to Expand Diazotrophy to Other Species *275*
9.5.7 Occurrence of NifUS-Like in Non-Nitrogen-Fixing Species *276*
9.6 Concluding Remarks *278*
Acknowledgments *279*
References *279*

10 Alternative Substrates of Nitrogenase *287*
Frederik V. Schmidt and Johannes G. Rebelein
Chapter Goals *287*
Main Chapter Points *287*
10.1 Nitrogenase Introduction *287*
10.1.1 Nitrogenase Isozymes *288*
10.1.2 Nitrogenase Mechanism *290*
10.1.3 Alternative Substrates of Nitrogenase *292*
10.2 Carbon Monoxide and Carbon Dioxide *294*
10.2.1 Carbon Monoxide *295*
10.2.1.1 CO Reduction by the Mo Nitrogenase *295*
10.2.1.2 CO Reduction by the V Nitrogenase *297*
10.2.1.3 CO Reduction by the Fe Nitrogenase *299*
10.2.1.4 Conclusions on CO Reduction by Nitrogenases *299*
10.2.2 Carbon Dioxide *301*
10.2.2.1 CO_2 Reduction by the Mo Nitrogenase *301*
10.2.2.2 CO_2 Reduction by the V Nitrogenase *302*
10.2.2.3 CO_2 Reduction by the Fe Nitrogenase *302*
10.2.2.4 Conclusions on CO_2 Reduction by Nitrogenases *303*
10.3 Hydrocarbon Substrates *303*
10.3.1 Acetylene *305*
10.3.2 Other Alkynes and Alkenes *306*
10.4 Alternative Nitrogen-Containing Substrates *306*
10.4.1 Azide *306*
10.4.2 Cyanide, Nitriles, and Isonitriles *307*

10.5 Conclusions *308*
References *308*

Volume 2

Preface *xvii*

11 Electron-Bifurcating Hydrogenases *317*
Gregory E. Vansuch, Effie C. Kisgeropoulos, Jonathan R. Humphreys, Carolyn E. Lubner, David W. Mulder, and Paul W. King

12 Inhibition of [FeFe]-Hydrogenases by Small Molecules *381*
Claudia Brocks and Thomas Happe

13 Biosynthesis of [NiFe]-Hydrogenase *407*
Oliver Lenz and Giorgio Caserta

14 [Fe]-Hydrogenase and the FeGP Cofactor Involved in the CO_2-Reducing Hydrogenotrophic Methanogenic Pathway *447*
Seigo Shima, Joao Pedro Fernandes-Queiroz, and Masanori Kaneko

15 Catalysis by Hydrogenase *489*
Seigo Shima, James A. Birrell, Sven T. Stripp, Giorgio Caserta, and Oliver Lenz

16 Macromolecular Crystallography *541*
Konstantin Bikbaev and Ingrid Span

17 Vibrational and Mössbauer Spectroscopic Techniques to Study Iron–Sulfur Clusters *571*
Christian Lorent, Giorgio Caserta, Volker Schünemann, and Ingo Zebger

18 The Multisite Microstate Model: A Theoretical Approach for Analyzing Charge Transfer in Proteins *617*
G. Matthias Ullmann and Rajeev Ranjan Roy

19 Structural and Functional Bioinorganic Model Chemistry of Fe–S Clusters – Synthesis and Analysis *649*
Benedict Josua Elvers and Carola Schulzke

20 Metal-Dependent Formate Dehydrogenases and Their Interplay and Relationship to Iron–Sulfur Clusters *705*
Benjamin R. Duffus

Index *747*
