Contents

1 Accelarators, Colliders and Their Application (E. WILSON) 1-1

1.1 Why Build Accelerators? 1-1
1.2 Types and Evolution of Accelerators 1-2
1.2.1 Early Accelerators 1-2
1.2.2 The Ray Transformer 1-3
1.2.3 Repetitive Acceleration 1-4
1.2.4 Linear Accelerators 1-4
1.2.5 Cyclotrons 1-6
1.2.6 The Synchrotron 1-7
1.2.7 Phase Stability 1-10

References for 1 1-10

2 Beam Dynamics (E. WILSON) 2-1

2.1 Linear Transverse Beam Dynamics 2-1
2.1.1 Co-ordinate System 2-1
2.1.2 Displacement and Divergence 2-1
2.1.3 Bending Magnets and Magnetic Rigidity 2-2
2.1.4 Particle Trajectory in a Dipole Bending Magnet 2-3
2.1.5 Weak Focusing 2-3
2.1.6 Alternating Gradient Focusing 2-5
2.1.7 Quadrupole Magnets 2-5
2.1.8 The Equation of Motion 2-6
2.1.9 Matrix Description 2-7
2.1.10 Transport Matrices for the Components of a Period 2-9
2.1.11 The Betatron Envelopes 2-11

2.2 Coupling 2-12
2.2.1 Coupling Fields 2-13
2.2.2 Qualitative Treatment of Coupling 2-13

2.3 Liouville's Theorem 2-16
2.3.1 Chains of Accelerators 2-18
2.3.2 Exceptions to Liouville's Theorem 2-18

2.4 Momentum Dependent Transverse Motion 2-19
2.4.1 Dispersion 2-19
2.4.2 Chromaticity 2-20

2.5 Longitudinal Motion 2-21
2.5.1 Stability of the Lagging Particle 2-21
2.5.2 Transition Energy 2-22
2.5.3 Synchrotron Motion 2-23
2.5.4 Stationary Buckets 2-25

References for 2 2-25

3 Non-Linear Dynamics in Accelerators (W. HERR, E. FOREST) 3-1

3.1 Introduction 3-1
3.1.1 Single Particle Dynamics 3-1
3.1.2 Layout of the Treatment 3-1

3.2 Sources of Non-Linearities 3-2
3.2.1 Non-Linear Machine Elements 3-2
3.2.1.1 Unwanted Non-Linear Machine Elements 3-2
3.2.1.2 Wanted Non-Linear Machine Elements 3-3
3.2.2 Beam-Beam Effects and Space Charge 3-3

3.3 Techniques and Tools to Evaluate and Correct Non-Linear Effects 3-3
3.3.1 Map Based Techniques 3-4
3.3.2 Particle Tracking 3-4
3.3.2.1 Symplecticity 3-4
3.3.2.2 Thick and Thin Lenses 3-5
3.3.2.3 Symplectic Matrices and Symplectic Integration 3-5
3.3.3 Taylor Maps and Lie Maps 3-7
3.3.3.1 Taylor Maps 3-7
3.3.3.2 Lie Maps and Transformations 3-7
3.3.3.3 Concatenation of Lie Transformations 3-9
3.3.4 Analysis Techniques - Poincaré Surface of Section 3-11
3.3.5 Analysis Techniques - Normal Forms 3-12
3.3.5.1 Normal Form Transformation - Linear Case 3-12
3.3.5.2 Normal Form Transformation - Non-Linear Case 3-13
3.3.5.3 Three Dimensional Systems 3-14
3.3.6 Differential Algebra Techniques 3-14
3.3.6.1 Differential Algebra - Concept 3-15
3.3.6.2 Differential Algebra - the Algebra 3-15
3.3.6.3 Differential Algebra - Applications 3-17
3.3.6.4 Differential Algebra - Simple Example 3-17

3.4 Beam Dynamics with Non-Linearities 3-18
3.4.1 Amplitude Detuning 3-19
3.4.1.1 Amplitude Detuning due to Non-Linearities in Machine Elements 3-19
3.4.1.2 Amplitude Detuning due to Beam-Beam Effects 3-19
3.4.1.3 Phase Space Structure 3-20
3.4.2 Non-Linear Resonances 3-21
3.4.2.1 Resonance Condition in One Dimension 3-21
3.4.2.2 Driving Terms 3-21
3.4.3 Chromaticity and Chromaticity Correction 3-22
3.4.4 Dynamic Aperture 3-22
3.4.4.1 Long Term Stability and Chaotic Behaviour 3-22
3.4.4.2 Practical Implications 3-23

References for 3 3-23

4 Impedance and Collective Effects (COORDINATED BY E. METRAL) 4-1

4.1 Space Charge (E. METRAL) 4-1
4.1.1 Direct Space Charge 4-1
4.1.2 Indirect Space Charge 4-4

4.2 Wake Fields and Impedances (E. METRAL) 4-5

4.3 **Coherent Instabilities** (E. METRAL) 4-9
4.3.1 Longitudinal 4-10
4.3.2 Transverse 4-12

4.4 **Landau Damping** (E. METRAL) 4-15
4.4.1 Transverse 4-16
4.4.2 Longitudinal 4-18

4.5 **Two-Stream Effects (Electron Cloud and Ions)** (G. RUMOLO) 4-19
4.5.1 Electron Cloud Build-up in Positron / Hadron Machines 4-19
4.5.2 The Electron Cloud Instability 4-22
4.5.3 Mitigation and Suppression 4-24

4.6 **Beam-Beam Effects** (W. HERR) 4-26
4.6.1 Beam-Beam Parameter and Tune Footprint 4-26
4.6.2 Incoherent Beam Stability 4-28
4.6.3 Coherent Beam-Beam Modes 4-30
4.6.4 Compensation of Beam-Beam Effects 4-31

4.7 **Numerical Modelling** (G. RUMOLO) 4-32
4.7.1 The Electromagnetic Problem 4-32
4.7.2 Beam Dynamics 4-33

References for 4 4-35

5 **Interactions of Beams With Surroundings**
(COORDINATED BY B. GODDARD) 5-1

5.1 **The Interactions of High Energy Particles With Matter** (M. BRUGGER) 5-1
5.1.1 Basic Physical Processes and Passage Through Matter 5-2
5.1.2 Simulation Tools 5-3
5.1.2.1 FLUKA 5-3
5.1.2.2 GEANT4 5-4
5.1.2.3 MARS15 5-4
5.1.2.4 MCNPX 5-5
5.1.2.5 PHITS 5-5
5.1.2.6 Simulation Uncertainties 5-6
5.1.3 Practical Shielding Considerations 5-6
5.1.3.1 Attenuation of Radiation 5-7
5.1.3.2 Shielding of Electromagnetic Showers 5-7
5.1.3.3 Shielding of Charged Hadrons 5-7
5.1.3.4 Shielding of Neutrons 5-7

5.2 **Lifetimes, Intensity and Luminosity** (H. BURKHARDT) 5-8
5.2.1 Beam-Gas 5-9
5.2.1.1 eN Scattering Relevant for Electron Rings 5-10
5.2.1.2 pN Scattering Relevant for Proton Rings 5-10
5.2.2 Thermal Photons 5-11
5.2.3 Luminosity Lifetime 5-11

5.3 **Experimental Conditions** (H. BURKHARDT) 5-12
5.3.1 Sources of Detector Background and Detector Performance 5-13
5.3.2 Synchrotron Radiation Background 5-14

References for 5 5-16

6 Design and Princples of Synchrotrons and Circular Colliders (COORDINATED BY K. HANKE) . . . 6-1

6.1 Beam Optics and Lattice Design in High Energy Particle Accelerators (B.J. HOLZER) . . . 6-1
6.1.1 Geometry of the Ring . . . 6-1
6.1.2 Lattice Design . . . 6-2
References for 6.1 . . . 6-5

6.2 Lattice Insertions (B.J. HOLZER) . . . 6-6
6.2.1 Low Beta Insertions . . . 6-6
6.2.2 Injection and Extraction Insertions . . . 6-8
6.2.3 Dispersion Suppressors . . . 6-9
6.2.3.1 Dispersion Suppression Using Additional Quadrupole Magnets . . . 6-9
6.2.3.1.1 The "Straightforward" Way . . . 6-9
6.2.3.1.2 The "Clever" Way: Half Bend Schemes . . . 6-11
6.2.3.1.3 The "Missing Bend" Dispersion Suppressor Scheme . . . 6-13
References for 6.2 . . . 6-13

6.3 Injection and Extraction Techniques (B. GODDARD) . . . 6-15
6.3.1 Fast Injection . . . 6-15
6.3.2 Slip-Stacking Injection . . . 6-16
6.3.3 H^- Charge-Exchange Injection . . . 6-16
6.3.4 Lepton Accumulation Injection . . . 6-17
6.3.5 Fast Extraction . . . 6-18
6.3.6 Resonant Extraction . . . 6-18
6.3.7 Continuous Transfer Extraction . . . 6-19
6.3.8 Resonant Continuous Transfer Extraction . . . 6-19
6.3.9 Other Injection and Extraction Techniques . . . 6-20
References for 6.3 . . . 6-20

6.4 Concept of Luminosity (W. HERR, B.J. HOLZER, B. MURATORI) . . . 6-22
6.4.1 Introduction . . . 6-22
6.4.2 Computation of Luminosity . . . 6-22
6.4.3 Luminosity With Correction Factors . . . 6-23
6.4.3.1 Effect of Crossing Angle and Transverse Offset . . . 6-23
6.4.3.2 Hour Glass Effect . . . 6-24
6.4.4 Integrated Luminosity . . . 6-24
6.4.5 Measurement and Calibration of Luminosity . . . 6-24
6.4.6 Absolute Luminosity - Lepton Colliders . . . 6-25
6.4.7 Absolute Luminosity - Hadron Colliders . . . 6-25
6.4.7.1 Measurement by Profile Monitors and Beam Displacement . . . 6-25
6.4.7.2 Absolute Measurement With Optical Theorem . . . 6-26
References for 6.4 . . . 6-27

6.5 Synchrotron Radiation and Damping (L. RIVKIN) . . . 6-28
6.5.1 Basic Properties of Synchrotron Radiation . . . 6-28
6.5.2 Radiation Damping . . . 6-28
References for 6.5 . . . 6-30

6.6 Computer Codes for Beam Dynamics (W. HERR) . . . 6-31
6.6.1 Introduction . . . 6-31
6.6.2 Classes of Beam Dynamics Codes . . . 6-31
6.6.3 Optics Codes . . . 6-31

6.6.4 Single Particle Tracking Codes . . . 6-32
6.6.4.1 Techniques . . . 6-32
6.6.4.2 Analysis of Tracking Data . . . 6-33
6.6.5 Multi Particle Tracking Codes . . . 6-33
References for 6.6 . . . 6-33

6.7 Electron-Positron Circular Colliders (J.M. JOWETT) . . . 6-34
6.7.1 Physics of Electron-Positron Rings . . . 6-34
6.7.2 Design of Colliders . . . 6-35
References for 6.7 . . . 6-36

6.8 Hadron Colliders and Electron-Proton Colliders (K. HANKE, B.J. HOLZER) . . . 6-37
6.8.1 Principles of Hadron Colliders . . . 6-37
6.8.2 Proton-Antiproton Colliders . . . 6-37
6.8.3 Proton-Proton Colliders . . . 6-38
6.8.4 Electron-Proton Colliders . . . 6-38
References for 6.8 . . . 6-42

6.9 Ion Colliders (W. FISCHER) . . . 6-43
References for 6.9 . . . 6-45

6.10 Beam Cooling (F. CASPERS, D. MÖHL) . . . 6-47
6.10.1 Introduction . . . 6-47
6.10.2 Beam Cooling Techniques . . . 6-48
6.10.2.1 Radiation Cooling . . . 6-48
6.10.2.2 Microwave Stochastic Cooling . . . 6-49
6.10.2.3 Electron Cooling . . . 6-53
6.10.2.4 Laser Cooling . . . 6-55
6.10.2.5 Ionisation Cooling . . . 6-56
6.10.2.6 Cooling of Particles in Traps . . . 6-58
References for 6.10 . . . 6-59

7 Design and Principles of Linear Accelerators and Colliders (COORDINATED BY J. SEEMAN, J.P. DELAHAYE) . . . 7-1

7.1 General Introduction on Linear Accelerators (J. SEEMAN) . . . 7-1
References for 7.1 . . . 7-3

7.2 The Only Linear Collider Built so Far: the SLC (N. PHINNEY) . . . 7-4
References for 7.2 . . . 7-5

7.3 High Luminosity Issues and Beam-Beam Effects (D. SCHULTE) . . . 7-7
References for 7.3 . . . 7-8

7.4 CLIC & ILC (J.P. DELAHAYE, M. ROSS) . . . 7-10
7.4.1 Introduction . . . 7-10
7.4.2 ILC Design . . . 7-11
7.4.3 CLIC Design . . . 7-11
7.4.4 R&D . . . 7-13
7.4.4.1 ILC Specific . . . 7-13
7.4.4.2 CLIC Specific . . . 7-13
7.4.5 Common Issues . . . 7-13
7.4.6 Status and Prospective . . . 7-14
References for 7.4 . . . 7-15

7.5 Accelerating Structures Design and Efficiency (A. GRUDIEV, A. YAMAMOTO) . . . 7-16
7.5.1 Normal Conducting Accelerating Structures . . . 7-17
7.5.2 Super Conducting Accelerating Structures . . . 7-19
References for 7.5 . . . 7-21

7.6 Wakefields and Emittance Preservation (A. LATINA) . . . 7-22
7.6.1 Single-Bunch Wakefield-Induced Effects . . . 7-23
7.6.2 Multi-Bunch Wakefield-Induced Effects . . . 7-24
References for 7.6 . . . 7-25

7.7 Focusing at Interaction Point (A. SERYI, R. TOMÁS GARCÍA) . . . 7-26
References for 7.7 . . . 7-27

7.8 Low Emittance Generation (S. GUIDUCCI, Y. PAPAPHILIPPOU) . . . 7-28
References for 7.8 . . . 7-29

7.9 Recirculating Linacs and Power Recovery (G. KRAFFT) . . . 7-31
References for 7.9 . . . 7-33

8 Accelerator Technology (COORDINATED BY F. BORDRY) . . . 8-1

8.1 Magnets, Normal and Superconducting (L. BOTTURA, D. TOMMASINI) . . . 8-1
8.1.1 Introduction . . . 8-1
8.1.2 Normal Conducting Magnets . . . 8-3
8.1.2.1 Magnetic Design . . . 8-5
8.1.2.2 Coils . . . 8-6
8.1.2.3 Yoke . . . 8-8
8.1.2.4 Costs . . . 8-8
8.1.2.5 Undulators, Wigglers, Permanent Magnets . . . 8-9
8.1.2.4 Solenoids . . . 8-10
8.1.3 Superconducting Magnets . . . 8-10
8.1.3.1 Superconducting Materials . . . 8-11
8.1.3.1.1 Nb-Ti . . . 8-13
8.1.3.1.2 Nb3Sn . . . 8-13
8.1.3.1.3 MgB2 . . . 8-13
8.1.3.1.4 Cuprate Superconductors . . . 8-14
8.1.3.2 Superconducting Cables . . . 8-14
8.1.3.3 Stability and Margins, Quench and Protection . . . 8-15
8.1.3.4 Magnetization, Coupling and AC Loss . . . 8-17
8.1.3.5 Magnetic Design of Superconducting Accelerator Magnets . . . 8-18
8.1.3.6 Current Leads . . . 8-19
8.1.3.7 Mechanics, Insulation, Cooling and Manufacturing Aspects . . . 8-20
References for 8.1 . . . 8-22

8.2 RF Cavities (E. JENSEN) . . . 8-24
8.2.1 Parameters of a Cavity . . . 8-25
8.2.2 The RF Cavity as Part of the System . . . 8-27
8.2.3 Ferrite Cavities . . . 8-27
8.2.4 Wide-Band Cavities . . . 8-28
8.2.5 Single-Gap Vacuum Cavities . . . 8-29
8.2.6 Multi-Gap Cavities . . . 8-30
8.2.7 Superconducting Cavities . . . 8-31

8.2.8 RF Cavities for Special Applications . . . 8-32
8.2.9 Deflecting Cavities - Crab Cavities . . . 8-33
References for 8.2 . . . 8-34

8.3 Cryogenics (PH. LEBRUN, L.TAVIAN) . . . 8-35
8.3.1 Introduction . . . 8-35
8.3.2 Cryogenic Fluids . . . 8-35
8.3.2.1 Thermophysical Properties . . . 8-35
8.3.2.2 Liquid Boil-off . . . 8-36
8.3.2.3 Cryogen Usage for Equipment Cooldown . . . 8-36
8.3.2.4 Phase Domain . . . 8-37
8.3.3 Materials at Low Temperatures . . . 8-38
8.3.4 Heat Transfer and Thermal Design . . . 8-39
8.3.4.1 Solid Conduction . . . 8-40
8.3.4.2 Radiation . . . 8-40
8.3.4.3 Gas Conduction . . . 8-41
8.3.4.4 Multilayer Insulation . . . 8-42
8.3.4.5 Vapour-Cooling of Necks and Supports . . . 8-43
8.3.5 Refrigeration and Liquefaction . . . 8-44
8.3.5.1 Thermodynamics of Refrigeration . . . 8-44
8.3.5.2 Helium Refrigerators vs. Liquefiers . . . 8-45
8.3.5.3 Real Cycles and Refrigeration Equipment . . . 8-45
References for 8.3 . . . 8-48

8.4 High Precision Power Converters for Particle Accelerators
(F. BORDRY, J.P. BURNET, M. CERQUEIRA BASTOS) . . . 8-50
8.4.1 Introduction to Magnet Power Converters . . . 8-50
8.4.2 Main Parameters of Magnet Power Converters . . . 8-50
8.4.3 Power Converter Topologies . . . 8-51
8.4.3.1 Thyristor Controlled Rectifier . . . 8-51
8.4.3.2 Switch-Mode Power Converter . . . 8-52
8.4.3.2.1 Switch-Mode Power Converter With 50Hz Transformer . . . 8-52
8.4.3.2.2 Switch-Mode Power Converter With High Frequency Transformer . . . 8-53
8.4.3.3 Fast Pulsed Power Converter . . . 8-54
8.4.3.4 High Power System With Local Energy Storage . . . 8-54
8.4.4 High Accuracy in Power Converters for Particle Accelerators . . . 8-55
8.4.4.1 Power Converter Control . . . 8-56
8.4.4.2 Current Measurement in Particle Accelerators . . . 8-57
8.4.4.2.1 Current Measurement Technologies . . . 8-57
8.4.4.2.2 DCCTs (Direct-Current Current Transformers) . . . 8-57
8.4.4.2.3 ADCs (Analogue to Digital Converters) . . . 8-59
8.4.4.2.4 Calibration . . . 8-60
References for 8.4 . . . 8-62

8.5 Ultra-High Vacuum (V. BAGLIN, J.M. JIMENEZ) . . . 8-63
8.5.1 Introduction . . . 8-63
8.5.2 Vacuum Fundamentals . . . 8-63
8.5.2.1 Total, Partial and Vapor Pressures . . . 8-63
8.5.2.2 Gas Laws and Gas Densities . . . 8-64
8.5.2.3 Gas Flow, Mean Free Path, Throughput and Ultimate Pressure . . . 8-65
8.5.2.4 Outgassing of Materials . . . 8-65
8.5.2.5 Kinetic Theory of Gasses . . . 8-66
8.5.2.6 Conductance and Effective Pumping Speed . . . 8-66

8.5.3 Vacuum Dynamics . . . 8-67
8.5.3.1 Synchrotron Radiation . . . 8-67
8.5.3.2 Electron Cloud . . . 8-69
8.5.3.3 Vacuum Stability . . . 8-70
8.5.3.4 Particle Losses . . . 8-70
8.5.4 Vacuum Engineering . . . 8-71
8.5.4.1 Vacuum Pumping . . . 8-71
8.5.4.2 Vacuum Instrumentation . . . 8-72
8.5.4.3 Vacuum Sectorisation . . . 8-73
8.5.4.4 Corrosion Issues . . . 8-73
8.5.4.5 Experimental Areas . . . 8-73
References for 8.5 . . . 8-74

8.6 Beam Instrumentation and Diagnostics
(R. JONES, T. LEFEVRE, H. SCHMICKLER) . . . 8-76
8.6.1 Beam Position Measurement . . . 8-76
8.6.1.1 Pick-ups . . . 8-76
8.6.1.2 Beam Position Acquisition Systems . . . 8-78
8.6.2 Beam Current and Intensity Measurement . . . 8-79
8.6.2.1 Faraday Cup . . . 8-79
8.6.2.2 AC Beam Transformers . . . 8-79
8.6.2.3 DC Beam Transformers . . . 8-79
8.6.3 Diagnostics of Transverse Beam Motion . . . 8-80
8.6.3.1 Tune Measurement . . . 8-80
8.6.3.2 Chromaticity Measurement . . . 8-82
8.6.3.3 Coupling Measurement . . . 8-82
8.6.4 Beam Profile Measurements . . . 8-82
8.6.4.1 Secondary Emission Grids . . . 8-83
8.6.4.2 Scintillator and Optical Transition Radiation Screens . . . 8-83
8.6.4.3 Wire Scanners . . . 8-84
8.6.4.4 Residual Gas and Luminescence Monitors . . . 8-85
8.6.4.5 Synchrotron Radiation Monitors . . . 8-85
8.6.5 Beam Loss Monitoring . . . 8-86
8.6.5.1 Global BLM Systems . . . 8-86
8.6.5.2 Distributed BLM Systems . . . 8-86
8.6.6 Short Bunch Length Diagnostics . . . 8-87
8.6.6.1 Direct Beam Observation . . . 8-87
8.6.6.2 Coherent Radiation . . . 8-87
8.6.6.3 Radio-Frequency and Electro-optic Sampling Techniques . . . 8-88
References for 8.6 . . . 8-89

8.7 Injection and Extraction Related Hardware: Kickers and Septa
(M.J. BARNES, J. BORBURGH, V. MERTENS) . . . 8-90
8.7.1 Fast Pulsed Systems (Kickers) . . . 8-91
8.7.1.1 Kicker Magnets . . . 8-92
8.7.1.2 Beam Coupling Impedance . . . 8-93
8.7.1.3 Pulse Generation and Forming . . . 8-94
8.7.1.4 Power Switching . . . 8-95
8.7.1.5 Other Types of Circuits . . . 8-97
8.7.1.6 Electronics and Controls . . . 8-97
8.7.2 Electrostatic and Magnetic Septa . . . 8-98
8.7.2.1 Electrostatic Septa . . . 8-98
8.7.2.2 Magnetic Septa . . . 8-99
References for 8.7 . . . 8-103

10 The Largest Accelerators and Colliders of Their Time (COORDINATED BY R. BAILEY) . . . 10-1

10.1 Proton Accelerators and Colliders (K. HÜBNER) . . . 10-1
10.1.1 CERN Proton Synchrotron (CPS) . . . 10-1
10.1.2 Brookhaven Alternating Gradient Synchrotron (AGS) . . . 10-2
10.1.3 The 70 GeV Proton Synchrotron (U-70) of IHEP-Protvino . . . 10-3
10.1.4 The CERN Intersecting Storage Rings (ISR) . . . 10-5
10.1.5 The CERN Super Proton Synchrotron (SPS) . . . 10-6
10.1.6 The CERN Super Proton Synchrotron (SPS) as Proton-Antiproton Collider . . . 10-7
10.1.7 Tevatron of Fermi National Laboratory (FNAL) . . . 10-9
References for 10.1 . . . 10-10

12 Outlook for the Future (COORDINATED BY C. JOSHI, A. CALDWELL) . . . 12-1

12.1 Plasma Accelerators (C. JOSHI, A. CALDWELL) . . . 12-1
12.1.1 Introduction . . . 12-1
12.1.2 Physical Concepts . . . 12-2
12.1.2.1 Phase Velocity v_ϕ . . . 12-3
12.1.2.2 Dephasing Length L_d . . . 12-3
12.1.2.3 Pump Depletion Length L_{pd} . . . 12-3
12.1.2.4 Injection . . . 12-3
12.1.2.5 Net Energy Gain ΔW . . . 12-5
12.1.2.6 Beam Loading . . . 12-5
12.1.2.7 Evolution . . . 12-5
12.1.2.8 Guiding . . . 12-6

12.1.2.9 Head Erosion 12-6
12.1.2.10 Instabilities 12-7
12.1.3 Types of Laser-Plasma Accelerators 12-7
12.1.3.1 Electron Beam Driven PWA 12-7
12.1.3.2 Proton and Positron Beam Driven PWA 12-8
12.1.4 Types of Laser-Plasma Accelerators 12-9
12.1.4.1 Plasma Beat Wave Accelerator (PBWA) 12-9
12.1.4.2 Self-Modulated Laser-Wakefield Accelerator (SM-LWFA) 12-9
12.1.4.3 Laser Wakefield Accelerator (LWFA) 12-9
12.1.5 LWFA Regimes 12-9
12.1.5.1 Linear 12-9
12.1.5.2 Nonlinear 12-10
12.1.5.3 Scaling Laws 12-10
12.1.6 Status 12-11
References for 12.1 12-12

12.2 Muon Collider (S.D. HOLMES, V.D. SHILTSEV) 12-16
12.2.1 Technical Motivations 12-17
12.2.2 Design Concepts 12-18
12.2.3 Technology Development 12-19
References for 12.2 12-20

13 Cosmic Particle Accelerators (W. HOFMANN, J.A. HINTON) 13-1

13.1 Introduction 13-1
13.2 Cosmic Ray Properties and Implications for Cosmic Ray Sources 13-1
13.2.1 Cosmic Ray Spectrum 13-2
13.2.2 Cosmic Ray Composition, Cosmic Ray Propagation, and Cosmic Ray Energetics . 13-3
13.2.3 Cosmic Ray Anisotropy 13-5
13.2.4 Electrons and Antiparticles Among Cosmic Rays 13-6
13.2.5 Astronomy With Ultra High Energy Cosmic Rays 13-8
13.3 Particle Acceleration Mechanisms and Supernova Shocks as Cosmic Accelerators 13-9
13.3.1 Shock Acceleration in Supernova Remnants 13-9
13.3.2 Pulsars as Particle Sources 13-12
13.4 Probing Cosmic-Ray Sources and Propagation Using Gamma-Rays and Neutrinos 13-13
13.4.1 Diffuse Gamma Ray Emission: Tracing Cosmic Rays in the Galaxy 13-15
13.4.2 Supernova Remnants Viewed in Gamma Rays 13-16
13.4.3 Pulars and Pulsar Wind Nebulae 13-18
13.4.4 Other Galactic Systems as Sources of High-Energy Radiation 13-21
13.4.5 Particle Acceleration Driven by Supermassive Black Holes 13-21
13.5 Outlook 13-23
References for 13 13-24
