About the Author *x*

Preface *xi*

Acknowledgments *xiv*

1	Introduction	<i>1</i>
1.1	The New Quantum Age and the Second Quantum Revolution	<i>1</i>
1.2	Distributed Quantum Computing and the Rise of Quantum Internet Computing	<i>4</i>
1.2.1	Distributed Quantum Computing	<i>5</i>
1.2.2	Quantum Internet Computing	<i>8</i>
1.3	Aim and Scope of the Book	<i>9</i>
1.4	Outline of this Book	<i>10</i>
1.5	Related Books and Resources	<i>11</i>
	References	<i>13</i>
2	Preliminaries	<i>17</i>
2.1	Qubit and Qubit States	<i>17</i>
2.2	Quantum Gates and Quantum Circuits	<i>23</i>
2.2.1	Single Qubit Gates	<i>24</i>
2.2.2	Measurement Operators	<i>26</i>
2.2.2.1	Measurement Postulate (General Measurement)	<i>27</i>
2.2.2.2	POVM	<i>27</i>
2.2.2.3	Projective Measurements	<i>28</i>
2.2.3	Multiple Qubit Gates	<i>29</i>
2.2.4	Quantum Circuits	<i>29</i>
2.2.5	Universal Quantum Computer and Gate Sets	<i>32</i>
2.3	Entanglement	<i>33</i>
2.4	Teleportation and Superdense Coding	<i>39</i>
2.5	Summary	<i>42</i>
2.6	Further Reading and Resources on Quantum Computing	<i>42</i>
	References	<i>43</i>

3	Distributed Quantum Computing – Classical and Quantum	45
3.1	The Power of Entanglement for Distributed Computing	46
3.1.1	Enabling Distributed Computations with Fewer Bits of Communication	46
3.1.1.1	The Distributed Three-Party Product Problem	47
3.1.1.2	The Distributed Deutsch–Jozsa Promise Problem	49
3.1.1.3	The Distributed Intersection Problem	52
3.1.1.4	Discussion	56
3.1.2	Enabling Distributed Computations Not Possible Classically	56
3.1.2.1	Greenberger–Horne–Zeilinger and Mermin (GHZ&M) Game	56
3.1.2.2	Clauser–Horne–Shimony–Holt (CHSH)	60
3.1.2.3	Discussion	67
3.2	Other Quantum Protocols	67
3.2.1	Quantum Coin Flipping	67
3.2.1.1	Classical Coin Flipping	67
3.2.1.2	Quantum Coin Flipping	74
3.2.2	Quantum Leader Election	77
3.2.3	Quantum Key Distribution (QKD)	79
3.2.4	Quantum Anonymous Broadcasting	90
3.2.5	Quantum Voting	97
3.2.6	Quantum Byzantine Generals Solution	99
3.2.7	Quantum Secret Sharing	104
3.2.8	Quantum Oblivious Transfer (OT)	105
3.2.9	Discussion	107
3.3	Summary	107
	References	107
4	Distributed Quantum Computing – Distributed Control of Quantum Gates	113
4.1	Performing a Distributed CNOT	113
4.1.1	Using Teleportation	113
4.1.2	A More Efficient Method With Cat-Like States	114
4.2	Beyond the Distributed CNOT	118
4.2.1	Same Control Qubit for Multiple Target Qubits on Different Machines	118
4.2.2	Multiple Control Qubits for the Same Target Qubit on a Different Machine	123
4.2.3	Cat-Entangler and Cat-Disentangler Modules	126
4.3	Distributing Quantum Circuits and Compilation for Distributed Quantum Programs	127

4.4	Control and Scheduling for Distributed Quantum Computers	129
4.5	Distributed Quantum Computing Without Internode Entanglement	132
4.6	Summary	133
	References	134
5	Delegating Quantum Computations	137
5.1	Delegating Private Quantum Computations	137
5.2	How to Verify Delegated Private Quantum Computations	149
5.2.1	<i>X</i> Gate Gadget	150
5.2.2	<i>Z</i> Gate Gadget	151
5.2.3	<i>CNOT</i> Gate Gadget	151
5.2.4	<i>R</i> Gate Gadget	151
5.2.5	<i>H</i> Gate Gadget	155
5.3	Quantum Computing-as-a-Service	158
5.4	Summary	158
	References	159
6	The Quantum Internet	161
6.1	Entanglement Over Longer Distances	161
6.1.1	Bell States and Bell State Measurement	162
6.1.2	Entanglement Swapping	163
6.1.3	Transmission of Qubits Using Tree-Cluster States	165
6.2	Entanglement with Higher Fidelity	172
6.2.1	Fidelity	172
6.2.2	Twirling Map	174
6.2.3	Quality of Distributed Entanglement and Entanglement Purification	177
6.3	Distributed Quantum Computation Over the Quantum Internet – Challenges	183
6.4	Summary	187
	References	187
7	Conclusion	191
	References	192
	Index	193
