

Contents

1. Introduction	1
2. Wave Motion	6
2.1 What is Wave Motion?	6
2.2 Dispersive and Nonlinear Effects of a Wave	7
2.3 Solitary Waves and the Korteweg de Vries Equation	8
2.4 Solution of the Korteweg de Vries Equation	10
3. Envelope of a Light Wave	13
3.1 Envelope of a Wave	13
3.2 Wave Equation for the Envelope Function	14
3.3 Nonlinear Schrödinger Equation and a Solitary Wave Solution	17
3.4 Derivation of the Envelope Equation for a Light Wave in a Fiber	21
4. Envelope Solitons	31
4.1 Soliton Solutions and the Results of Inverse Scattering	31
4.2 Soliton Periods	34
4.3 Conservation Quantities of the Nonlinear Schrödinger Equation	34
5. Solitons in Optical Fibers	35
5.1 Effect of Fiber Loss	35
5.2 Effect of Waveguide Property of a Fiber	36
5.3 Condition of Generation of a Soliton in Optical Fibers	38
5.4 Experiments on Generation of Optical Solitons	40
6. Amplification of a Soliton —	
Application to the Optical Soliton Transmission System	42
6.1 Raman Amplification of Optical Solitons	42
6.2 All-Optical Transmission Systems Utilizing Optical Solitons — Results of Computer Simulation	43
6.3 Experiment on the Long Distance Transmission of a Soliton by Repeated Raman Amplifications	45
6.4 Amplification by Erbium Doped Fiber	47
7. Other Applications of Optical Solitons	50
7.1 Soliton Laser	50
7.2 Soliton Compression	51

8. Influence of Higher Order Terms 53

8.1 Self-Frequency Shift of a Soliton

 Produced by Induced Raman Scattering 54

8.2 Fission of Solitons Produced by Self-Induced Raman Scattering 55

8.3 Effects of Other Higher Order Terms 57

9. Modulational Instability 58

9.1 Modulational Instability in the Nonlinear Schrödinger Equation 58

9.2 Effect of Fiber Loss 61

9.3 Induced Modulational Instability 62

10. Dark Solitons 65

10.1 Dark Soliton Solutions 65

10.2 Experimental Results of Dark Solitons 67

11. Summary 69
