About the Author *ix*

Preface *xi*

1	Backgrounds and Principles of Low-Grade Heat Harvesting	1
1.1	Backgrounds and History	2
1.2	Working Principles of Current Systems	5
1.2.1	Seebeck Effect	5
1.2.2	Peltier Effect	6
1.2.3	Thomson Effect	6
1.2.4	Thermodiffusion Effect	8
1.2.5	Thermogalvanic Effect	9
1.2.6	Thermoextraction Effect	10
1.3	Parameters for Low-Grade Heat Harvesting	11
1.3.1	Seebeck Coefficient	13
1.3.2	Electrical Conductivity	13
1.3.3	Thermal Conductivity	14
1.3.4	Conversion Efficiency	15
1.3.5	Power Density	18
	References	19
2	Conventional Thermoelectric Devices for Low-Grade Heat Harvesting	21
2.1	Basic Structure and Working Principle of Electronic Thermoelectric Device	21
2.1.1	Working Principle of Electronic Thermoelectric Devices	21
2.1.1.1	Seebeck Effect	21
2.1.1.2	Peltier Effect	22
2.1.1.3	Thomson Effect	23
2.2	Material System of Electronic Thermoelectric Device	24
2.2.1	Bi ₂ Te ₃ -Based Thermoelectric Material	25
2.2.2	PbX (X = S, Se, Te) Compound	28
2.2.3	SiGe Alloy	31

2.3	Performance and Optimization Method of Electronic Thermoelectric Device	33
2.4	Manufacturing Process of Electronic Thermoelectric Devices	36
2.5	Design, Integration and Application of Electronic Thermoelectric Device	38
2.5.1	Single-Stage/Multi-Stage Device Structure Design	38
2.5.2	Selection of Electrode Material and Electrode Connection Technology	39
2.5.3	Thermoelectric Material/Electrode Transition Layer and Interface Structure	39
2.5.4	Device Application and Service Performance	40
	References	42
3	Polymer-based Thermoelectric Devices for Low-Grade Heat Harvesting	43
3.1	Introduction	43
3.2	Conversion Process and Mechanism	45
3.3	Current Material Types and Design Principles	49
3.3.1	p-type Organic TE Materials	50
3.3.2	n-Type Organic TE Materials	52
3.3.3	PEDOT Derivatives	56
3.3.4	Carbon Nanotubes/Conductive Polymer Composites	57
3.3.5	Inorganic Semiconductive Nanomaterials/Polymer Composites	58
3.4	Construction and Functionalization of TE Devices	60
	References	64
4	Liquid-Based Thermocells for Heat-To-Current Conversion	67
4.1	Introduction	67
4.2	Basis of Thermocells Design	68
4.3	Engineering Strategies for Liquid-based Thermocells	74
4.3.1	Redox Couples	74
4.3.2	Electrolyte	77
4.3.3	Electrode	79
4.4	Direct and Indirect Thermocell Applications	82
	References	85
5	Thermosensitive Thermocells for Low-Grade Heat Harvesting	87
5.1	Introduction	87
5.2	Design Principle and Method of Thermosensitive Thermocells	88
5.2.1	Working Principle of Thermosensitive Thermocells	88
5.2.2	Measurement Conditions of Thermosensitive Thermocells	90
5.2.3	The Basic Principle and Design Points of Thermosensitive Thermocells	91
5.2.3.1	Working Principle of Thermosensitive Thermocells	91

5.2.3.2	The Hot End Temperature of Thermosensitive Thermocells is Calculated by CJC	93
5.2.3.3	Key Point of System Design of Thermosensitive Thermocells	94
5.2.3.4	The Basic Law of Thermosensitive Thermocells	95
5.2.3.5	Thermosensitive Thermocells Requirements for Thermal Electrode Materials	96
5.3	Performance Test Method and Device Integration Technology of Thermosensitive Thermocells	98
5.3.1	Electrode Material Selection and Electrode-Connected Technology of Thermosensitive Thermocells	99
5.3.2	Device Construction and Functionalization of Thermosensitive Thermocells	101
5.3.2.1	The Basic Structure of Thermosensitive Thermocells	101
5.3.2.2	The Interface Structure of Thermosensitive Thermocells	104
5.3.3	Performance Test Method of Thermosensitive Thermocells	105
5.3.3.1	Evaluation and Measurement of Conversion Efficiency and Output Power	105
5.3.3.2	Measurement of Thermoelectric Properties of Materials by Harman Method	107
5.4	Summary and Perspective	108
	References	109
6	Wearable Power Generation via Thermoelectrochemical Devices	111
6.1	Introduction	111
6.2	Thermoelectrochemical Devices Requirements for Wearables	113
6.2.1	Filler Material	113
6.2.2	Thermal Load Matching	113
6.2.3	Lateral Heat Flow and Substrates Effecting	115
6.3	Materials Toward Wearable Devices	116
6.3.1	Inorganic Material	116
6.3.2	Organic Polymer Material	121
6.3.3	Organic-Inorganic Composite Material	128
6.4	Summary and Future Trend	133
	References	134
7	Thermoelectric Ionogel for Low-Grade Heat Harvesting	137
7.1	Introduction	137
7.2	Thermoelectric Performance of Thermoelectric Ionogels	139
7.2.1	Basic Performance	139
7.2.2	Thermodiffusion Cell	141
7.2.3	Thermogalvanic Effect	143
7.2.4	Synergistic Thermodiffusion and Thermogalvanic Effect	145
7.3	Preparation of Thermoelectric Ionogel	145
7.4	Application of Thermoelectric Ionogel	149

7.5	Challenges and Opportunities	152
	References	152
8	Alkali Metal Thermal Electrochemical Converter	155
8.1	Introduction	155
8.2	The Single- and Dual-Stage Alkali Metal Thermal Electrochemical Converter	158
8.2.1	The Single-Stage Sodium Thermal Electrochemical Converter	158
8.2.2	The Dual-Stage Sodium Thermal Electrochemical Converter	163
8.3	The Alkali Metal Thermal Electrochemical Converter Devices	169
8.3.1	Working Fluids for AMTEC	169
8.3.2	Electrode for AMTEC	171
8.4	Challenges and Opportunities	171
	References	174
9	Thermally Regenerative Electrochemical Cycle and Other Techniques	177
9.1	Introduction	177
9.2	Progresses of TRECs	180
9.3	Combination of TRECs with Other Techniques	186
9.4	Challenges and Outlooks	190
	References	193
10	Integration of Energy Conversion and Storage Devices	195
10.1	Introduction	195
10.2	Mechanisms	196
10.2.1	Thermally Regenerative Electrochemical Cycles (TRECs)	200
10.3	Engineering Designs for Thermoelectrochemical Cells	203
10.3.1	p/n-Type Conversion	203
10.3.2	Functional Designs	205
10.3.3	Device Integration and Applications	207
10.4	Summary and Outlooks	210
	References	212
	Index	215
