

Contents

1	Introduction	1
1.1	Enzyme Classification	1
1.2	Enzyme Subunit Composition	3
1.3	Isozyme Classification	14
1.4	References	18
2	Extraction of Enzymes from Tissues, Cells and Cell-Organelles	19
2.1	Methods to Extract Enzymes from Microorganisms	19
2.2	Methods to Extract Enzymes from Animal Soft Tissue	22
2.3	Differential Extraction of Cytosolic and Mitochondrial Enzymes from Animal Soft Tissue	26
2.4	Extraction of Insects	28
2.5	Extraction of Plant Tissues	29
2.6	Concentration of Diluted Enzyme Extracts	31
2.7	Mammalian Blood	34
2.8	Pancreatic Islets	42
2.9	Isolation of Subcellular Organelles	43
2.10	Catalytic Activities of Enzymes Forming a Common Metabolic Sequence	65
2.11	References	67
3	Methods for Separating Native Enzymes	71
3.1	General Considerations	71
3.2	Cellulose Acetate Electrophoresis	72
3.3	Starch Gel Electrophoresis	80
3.4	References	88
3.5	Analytical Polyacrylamide Gel Electrophoresis for Separating Native Enzymes	89
3.6	2-D-Electrophoresis under Non-Denaturing Conditions	120
3.7	References	124
4	Sodium Dodecylsulphate Electrophoresis	127
4.1	Homogeneous Buffer Systems	127
4.2	Discontinuous Buffer Systems	128
4.3	Gradient Gel Systems	130

4.4	Enzyme Visualization Following SDS-Electrophoresis	134
4.5	References	138
5	Chemistry of Enzyme Visualization	141
5.1	Methods for Visualizing Oxidative Enzymes	142
5.2	Methods for Visualizing Transferases	151
5.3	Methods for Visualizing Hydrolases	155
5.4	Methods for Visualizing Lyases	167
5.5	Methods for Localizing Isomerases and Ligases	168
5.6	Visualization of Enzymes by Different Methods	168
5.7	References	176
6	A Compilation of Protocols to Visualize Enzymes	181
6.1	Index to Enzyme Recipes and Separation Systems	181
6.2	Protocols to Visualize Enzymes Following Electrophoretic Separation . . .	186
6.3	References	268
7	Data Evaluation in Population Genetics and Evolution	273
7.1	Allozymes as Gene Markers	273
7.2	Population Genetic Measures	277
7.3	Calculation of Dendrograms	295
7.4	References	300
	Subject Index	303
