Contents

1 Introduction 1

2 Theory of Two-Dimensional Dynamic Infinite Elements for Simulating Wave Propagation Problems in Infinite Media 7

2.1 Formulation of Two-Dimensional Dynamic Infinite Elements and Wave Input Method 9

2.1.1 Formulation of Two-Dimensional Dynamic Infinite Elements 11

2.1.2 Wave Input Method for Simulating Wave Scattering Problems in Infinite Media 17

2.2 Incident P-wave and SV-wave Reflection Characteristics on a Fixed Boundary 19

2.3 Formulation of Generalized Stresses on the Wave Input Boundary 24

2.3.1 SV-wave Incidence 24

2.3.2 P-wave Incidence 26

2.4 Verification of the Proposed Computational Model for Simulating Wave Scattering Problems in Infinite Media 30

2.4.1 Wave Reflection on the Surface of an Elastic Half-Plane . . 30

2.4.2 Wave Scattering on the Surface of a Semi-circular Canyon 32

2.4.3 Wave Scattering on the Surface of an Embankment Dam . 35

3 Application of Two-Dimensional Dynamic Infinite Elements: Simulation of Dynamic Dam–Water–Foundation Interaction Problems 39

3.1 Simulation of Dynamic Gravity Dam–Water–Foundation Interaction Systems 39

3.1.1 Computational Model of a Concrete Gravity Dam–Water–Foundation System Including Reservoir Bottom Sediments 40

3.1.2 Effects of Reservoir Bottom Sediments on the Dynamic Response of Concrete Gravity Dams due to Unit Harmonic Wave Incidences 47

3.1.3 Transient Response of Concrete Gravity Dams due to Earthquake Wave Incidences 56

3.2 Simulation of Dynamic Embankment Dam–Water–Foundation Interaction Systems 66

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.2.1 Effects of Impervious Member Types on the Dynamic Response of an Embankment Dam–Foundation System 69
3.2.2 Effects of Reservoir Bottom Sediments on the Dynamic Response of an Embankment Dam–Foundation System 76

4 Application of Two-Dimensional Dynamic Infinite Elements: Simulation of Wave Scattering Effects under Different Canyon Topographical and Geological Conditions 85
4.1 Simulation of Infinite Domain of a Canyon 87
4.2 Effects of Canyon Topographical Conditions on the Ground Motions due to Harmonic Wave Incidences 95
4.2.1 Free-Field Motions along V-shaped Canyons due to Harmonic Wave Incidences 95
4.2.2 Free-Field Motions along Trapezoidal Canyons due to Harmonic Wave Incidences 99
4.3 Effects of Canyon Geological Conditions on Ground Motions due to Harmonic Wave Incidences 101
4.4 Effects of Canyon Topographical Conditions on Ground Motions due to Seismic Wave Incidences 105
4.4.1 Free-Field Motions along V-shaped Canyons due to Seismic Wave Incidences 106
4.4.2 Free-Field Motions along Trapezoidal Canyons due to Seismic Wave Incidences 109
4.5 Effects of Canyon Geological Conditions on Ground Motions due to Seismic Wave Incidences 115

5 Theory of Three-Dimensional Dynamic Infinite Elements for Simulating Wave Propagation Problems in Infinite Media 119
5.1 Coupled Computational Model for Simulating Three-Dimensional Wave Propagation Problems in Infinite Foundations of Structures 121
5.2 Formulation of Three-Dimensional Dynamic Infinite Elements . . 123
5.2.1 Mapping Functions of Three-Dimensional Dynamic Infinite Elements 124
5.2.2 Displacement Shape Functions of Three-Dimensional Dynamic Infinite Elements 125
5.2.3 Mass and Stiffness Matrices of Three-Dimensional Dynamic Infinite Elements 131
5.3 Verification of Three-Dimensional Dynamic Infinite Elements . . 134

6 Application of Three-Dimensional Dynamic Infinite Elements: Simulation of Dynamic Structure–Foundation Interaction Problems 141

6.1 Numerical Simulation of Plate Foundation Vibration on a Visco-elastic Half-Space 141
6.1.1 Dynamic Response of a Square Plate on a Visco-elastic Half-Space under Harmonic Loading 142
6.1.2 Dynamic Response of a Square Plate on a Layered Visco-elastic Half-Space under Harmonic Loading 149
6.2 Numerical Simulation of the Dynamic Response of a Framed Structure–Raft Foundation–Underlying Soil/Rock System 156
6.2.1 Numerical Simulation of a Three-Dimensional Framed Structure–Raft Foundation–Underlying Soil/Rock System 160
6.2.2 Effects of Raft Foundation Flexibility on the Dynamic Response of a Three-Dimensional Framed Structure 163
6.2.3 Effects of Underlying Soil/Rock on the Dynamic Response of a Three-Dimensional Framed Structure 167

7 Theory of Transient Infinite Elements for Simulating Pore-Fluid Flow and Heat Transfer in Porous Media of Infinite Domains 173
7.1 Fundamental Theory of Transient Infinite Elements for Simulating Pore-Fluid Flow Problems in Fluid-Saturated Porous Media of Infinite Domains 174
7.1.1 Derivation of the Hydraulic Head Distribution Functions of Transient Infinite Elements 174
7.1.2 Derivation of the Property Matrices of Two-Dimensional Transient Infinite Elements for Simulating Pore-Fluid Flow Problems 180
7.2 Fundamental Theory of Transient Infinite Elements for Simulating Heat Transfer Problems in Fluid-Saturated Porous Media of Infinite Domains 188
7.2.1 Derivation of the Heat Transfer Functions of Transient Infinite Elements 188
7.2.2 Derivation of the Property Matrices of Two-Dimensional Transient Infinite Elements for Simulating Heat Transfer Problems 190
7.3 Verification of Transient Infinite Elements for Simulating Pore-Fluid Flow and Heat Transfer Problems in Fluid-Saturated Porous Media of Infinite Domains 194
7.3.1 Verification of Transient Infinite Elements for Simulating a Pore-Fluid Flow Problem in the Fluid-Saturated Porous Medium of an Infinite Domain . . 194
7.3.2 Verification of Transient Infinite Elements for Simulating a Heat Transfer Problem in the Fluid-Saturated Porous Medium of an Infinite Domain . . 195

8 Theory and Application of Transient Infinite Elements for Simulating Contaminant Transport Problems in Fractured Porous Media of Infinite Domains 201
8.1 Coupled Computational Method of Finite Elements and Transient Infinite Elements for Simulating Transient Contaminant Transport Problems in Fractured Porous Media of Infinite Domains 202
8.1.1 Upwind Finite Element Formulation of the Problem 203
8.1.2 Fundamental Formulas of Mapped Transient Infinite Elements for Simulating Transient Contaminant Transport Problems 210
8.1.3 Verification of the Coupled Computational Method of Upwind Finite Elements and Transient Infinite Elements 217
8.2 Parametric Study of Transient Contaminant Transport Problems in Fractured Porous Media of Infinite Domains 220
8.2.1 Effects of the Leakage between a Porous Block and a Fissured Network on Contaminant Concentration Distributions in the Fractured Porous Medium 221
8.2.2 Effects of Medium Porosities on Contaminant Concentration Distributions in the Porous Block and Fissured Network 228
8.2.3 Effects of Pore-Fluid Advection on Contaminant Concentration Distributions in the Porous Block and Fissured Network 232
8.2.4 Effects of Solute Dispersion on Contaminant Concentration Distributions in the Porous Block and Fissured Network 237
