

CONTENTS

FOREWORD	V
1. HISTORICAL INTRODUCTION	1
2. ELEMENTARY DESCRIPTION OF SPECTROMETERS	15
2.1. Equations of motion	15
2.2. Radius of curvature of electron trajectory	16
2.3. Energy - momentum relations	17
2.4. Radioactive source	19
2.5. Dispersion in a magnetic field	21
2.6. Focusing in a semicircular spectrometer	22
2.7. Line width in a semi-circular spectrometer	25
2.8. Anatomy of a spectrometer	27
2.9. Performance parameters	35
2.10. Classification of spectrometers	38
References	41
3. ANALOGY WITH GEOMETRICAL OPTICS	53
3.1. Fundamental laws	53
3.2. Ideal lens	54
3.3. Real lenses	58
3.4. Gaussian systems	59
3.5. Aberrations	59
3.6. Spherical aberrations	60
References	61
4. ELECTRON MOTION IN CYLINDRICAL FIELDS	65
Magnetic field with axial symmetry	65
Series expansion of vector potential	66
Equations of motion	67
First order solutions	70
Focusing angles	72

Dispersion	75
Second order solutions	76
Solid angles	77
Wide aperture optimum field	78
References	80
5. SEMICIRCULAR SPECTROMETERS	83
Beam geometries	83
Line shape	83
Performance parameters	84
Optimisation	86
Wide beam focusing	87
Spectrometers	88
References	90
6. $\pi\sqrt{2}$ SPECTROMETER	97
Discussion of second order solution	97
Higher order calculation	100
Iron magnets	101
Iron-free spectrometers	103
Twofold focusing spectrometer	105
References	106
7. $\pi\sqrt{10}$ SPECTROMETER	115
$\pi\sqrt{10}$ spectrometer in Moscow	116
References	117
8. $(\pi/2) \sqrt{13}$ SPECTROMETER	121
Spectrometer in Heidelberg	121
References	124
9. PRISMATIC (SECTOR) SPECTROMETERS	127
Focusing in uniform field sectors	129
Sectors with inhomogenous field	135

Prismatic beta-ray spectrometers	138
References	143
10. CORRECTORS AND NON-SYMMETRIC FIELDS	157
Multistrip source	157
Corrector for semicircular spectrograph	159
Correctors for $\pi\sqrt{2}$ spectrometers	159
Ketron	161
Azimuthally varying fields	164
References	167
11. TOROIDAL ("ORANGE") SPECTROMETERS	173
Theoretical analysis	174
Spectrometers	185
References	190
12. TROCHOIDAL SPECTROMETERS	201
Theoretical analysis	201
Magnet design	210
Six-loop spectrometer	211
References	214
LENSES	221
13. LONG LENSES	223
Theoretical analysis	223
Multiple ring focus baffle	231
Aberration correctors	232
Production of uniform magnetic field	232
Performances	233
References	235
14. SHORT LENSES	241
Theoretical analysis	241
Aberration corrector	247

Performances	249
References	250
15. INTERMEDIATE LENSES	253
Focusing properties	253
References	256
16. OPTICAL ANALOGY SPECTROMETER	263
Theoretical analysis	263
Deflecting magnet	271
Performances	275
Other spectrometers	276
References	277
