Foreword by Pierre Legendre and Louis Legendre	ix
--	----

I. Invited Lectures

Scaling techniques

John C. Gower	
Introduction to ordination techniques	3
J. Douglas Carroll	
Some multidimensional scaling and related procedures devised at Bell Laboratories, with ecological applications	65
Yves Escoufier	
The duality diagram: a means for better practical applications	139
Jan de Leeuw	
Nonlinear multivariate analysis with optimal scaling	157
Willem J. Heiser	
Joint ordination of species and sites: the unfolding technique	189

Clustering under *a priori* models

James C. Bezdek	
Some non-standard clustering algorithms	225
Pierre Legendre	
Constrained clustering	289
Leonard P. Lefkovich	
Species associations and conditional clustering	309

Fractal theory

Serge Frontier	
Applications of fractal theory to ecology	335

Path analysis for mixed variables

Jan de Leeuw	
Path analysis with optimal scaling	381

Spatial analysis

Brian Ripley	
Spatial point pattern analysis in ecology	407
Robert R. Sokal and James D. Thomson	
Applications of spatial autocorrelation in ecology	431

II. Working Group Reports

Manfred Bölker (Chairman)	
Numerical ecology: developments for microbial ecology	469
John C. Field (Chairman)	
Numerical ecology: developments for studying the benthos	485
Jordi Flos (Chairman)	
Data analysis in pelagic community studies	495
Louis Legendre (Chairman)	
Numerical ecology: developments for biological oceanography and limnology	521
Robert Gittins (Chairman)	
Numerical methods in terrestrial plant ecology	529
Daniel Simberloff (Chairman)	
Novel statistical analyses in terrestrial animal ecology: dirty data and clean questions	559
List of participants	573
Subject index	577
