
Contents

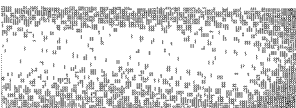

1. Introduction

1.1.	The Concept of Visual Computing	1
1.2.	Organization of the Book	7

2. Psychophysical Basics

2.1.	Anatomy of the Human Visual System	13
2.1.1.	Overview	13
2.1.2.	Biological Neurons	15
2.1.3.	Receptive Fields	16
2.1.4.	The Human Retina	17
2.1.5.	Organization of the Visual Cortex	20
2.2.	Physics of the Human Eye	22
2.2.1.	Image Projection and the Field of Vision	22
2.2.2.	Accommodation	22
2.2.3.	Image Quality and Diffraction Effects	24
2.3.	Measuring Light	25
2.3.1.	Spectral Sensitivity	25
2.3.2.	Basic Measurements	27
2.3.3.	Examples	29
2.4.	Rendering Physically Based Light Sources	30
2.4.1.	A Rendering Pipeline	30

2.4.2.	Modeling Light Sources	33
2.4.3.	Direct Illumination	33
2.4.4.	Spectral Radiosity	37
2.4.5.	Spectral Ray Tracing	39
2.4.6.	Examples	39

3. Sensitivity to Light and Color

3.1.	Visual Perception of Light and Shape	45
3.1.1.	Adaptation	45
3.1.2.	Spatial Sensitivity	53
3.1.3.	Temporal Sensitivity	58
3.1.4.	Binocular Vision	61
3.1.5.	Visual Clustering, Grouping and Gestalt	67
3.2.	Color Vision	70
3.2.1.	Physiological Basics	70
3.2.2.	Measuring Color	76
3.3.	Imaging Transforms	86

4. Visualization and Visibility Analysis

4.1.	Introduction	89
4.2.	Visibility Analysis Using Graphics and Imaging	90
4.2.1.	Introductory Remarks	90
4.2.2.	Factors Influencing the Visibility	91
4.2.3.	Mathematical Description of the Visibility	96
4.2.4.	Image Generation and Image Analysis	98
4.3.	Interactive Visualization and Simulation	110
4.3.1.	Introductory Remarks	110
4.3.2.	Modeling of Wind and Air Pollution	112
4.3.3.	Shape and Color for Visualization	116
4.3.4.	Examples	118
4.3.5.	The Need for Advanced Imaging Methods	118

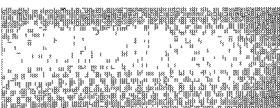

5. Computational Vision

5.1.	Introduction: The Marr Paradigm	125
------	--	-----

5.2.	Early Visual Processing	127
5.2.1.	Basics	127
5.2.2.	Modeling Retinal Image Processing	129
5.2.3.	Modeling Cortical Image Processing	133
5.3.	Advanced Visibility Analysis for Advertising	138
5.3.1.	The Psychology of Advertising	139
5.3.2.	Analyzing Retinal and Cortical Images	141
5.3.3.	Modeling via Ray Casting	144
5.3.4.	Examples	144
5.4.	Wavelets for Graphics and Imaging	146
5.4.1.	An Introduction to Wavelet Bases	146
5.4.2.	General Description of the CWT	147
5.4.3.	Nonorthogonal Wavelets	169
5.4.4.	Wavelets for Volume Rendering	172
5.4.5.	Wavelets for Texture Analysis	174
5.5.	Shape from Stereo	176
5.5.1.	Introductory Remarks	176
5.5.2.	Automatic Stereo Matching	179
5.5.3.	Formulation of a Matching Algorithm	185
5.5.4.	Examples	193
5.6.	Active Light Approaches: Laser Scanners	195

6. Image Analysis and Neural Networks

6.1.	Introductory Remarks	201
6.2.	Mathematical Foundations	202
6.2.1.	Cluster Analysis and Vector Quantization	202
6.2.2.	N-Tree Clustering	206
6.2.3.	Dimensionality Reduction and Ordering	208
6.2.4.	Principal Components and Subspaces	209
6.2.5.	Image Coding Using the KL-Transform	212
6.2.6.	Supervised Classification Methods	216
6.3.	Neural Networks	222

6.3.1.	An Introduction	222
6.3.2.	Self-Organizing Kohonen Maps	225
6.3.3.	Supervised Backpropagation Networks	235
6.3.4.	Other Neural Network Models	239

7. Neural Network Applications

7.1.	Introduction	247
7.2.	Recognition of Distorted Characters	248
7.2.1.	General Remarks	248
7.2.2.	Matched Filtering	249
7.2.3.	Error Probability for Binary Signals	252
7.2.4.	Transmission and Discrimination of Characters ..	254
7.2.5.	Results	256
7.3.	Analysis and Visualization of Mutidimensional Remotely Sensed Image Data Sets	262
7.3.1.	Remote Sensing Techniques	262
7.3.2.	Cluster Visualization and Subspace Mapping	265
7.3.3.	Studies on Satellite Image Classification	267
7.4.	Interactive Identification and Reconstruction of Brain Tumors in MR-Images	274
7.4.1.	Segmentation of Volume Data	274
7.4.2.	Magnetic Resonance Technology	275
7.4.3.	Clustering Texture Feature Spaces	280
7.4.4.	Some Results	280
7.5.	Automatic Face Recognition	288
7.5.1.	Face Recognition Methods	288
7.5.2.	Eigenfaces and Neural Networks	289
7.5.3.	Results	291
7.5.4.	Psychophysical Evidence	295

8.	The Way Ahead	303
