I. Introduction	7
II. Material and Methods	9
III. Results	12
Day 13 of gestation	12
Retina 12 Brain stem 14 Visual cortex 14	
Day 15 of gestation	17
Retina 17 Brain stem 18 Visual cortex 18	
Day 17 of gestation	19
Retina 19 Colliculus superior 19 Corpus geniculatum laterale 20	
Visual cortex 20	
Days 18 and 19 of gestation	21
Retina 21 Corpus geniculatum laterale 22 Colliculus superior 23	
Visual cortex 23	
Days 20 and 21 of gestation	24
Retina 24 Corpus geniculatum laterale 26 Colliculus superior 26	
Visual cortex 28	
Third postnatal day	28
Retina 28 Corpus geniculatum laterale 32 Colliculus superior 34	
Visual cortex 34	
Seventh postnatal day	35
Retina 35 Corpus geniculatum laterale 37 Colliculus superior 37	
Visual cortex 38	
Tenth postnatal day	38
Retina 38 Corpus geniculatum laterale 39 Colliculus superior 39	
Visual cortex 41	
Fourteenth postnatal day	41
Retina 41 Corpus geniculatum laterale 42 Colliculus superior 42	
Visual cortex 43	
IV. Discussion	43
1. The ventricular zone in its significance for the cell proliferation and the resulting growth of area and thickness of the immature brain	43
a) Proliferation and mitotic cycle	43
b) The structure of the ventricular zone (with special consideration of the developmental stages in which the ventricular zone represents almost the whole neural wall)	44
c) The ultrastructure of the ventricular cells	46
d) The behavior of the ventricular zone in different phases of development and different brain regions	46
e) Problems of growth of area and thickness of the developing brain	47
2. The histological and cytological differentiation	49
a) Cortex occipitalis	49
α) The prenatal neurogenesis and gliogenesis of the cortical layers	50
β) The mechanism of differentiation	50
γ) The development of the cortical layers	55
δ) The cytological differentiation of the occipital cerebral cortex	57

b) Colliculus superior and corpus geniculatum laterale	65
α) Histogenetic similarities and differences in comparison with the cortical development	65
β) The cytological differentiation of the colliculus superior and the corpus geniculatum laterale	67
c) The development of the retina	68
α) The ventricular zone	69
β) The inner nuclear layer	71
γ) The ganglion cell layer	72
δ) Model of the retinal histogenesis	73
3. Comparison of the development of the four visual centers with regard to their functional integration into the visual system	75
a) Comparison of the differentiation of the neurons that establish the contact between the individual visual centers	75
b) Comparison of the differentiation of the other neurons in the primary visual centers	76
V. Summary	78
