

Contents

List of Symbols	xiii
1 The Thermoelectric and Related Effects	1
1.1 Introduction	1
1.2 Relations Between the Thermoelectric Coefficients	3
1.3 Effects in a Magnetic Field.....	5
References.....	6
2 Theory of Thermoelectric Refrigeration and Generation.....	7
2.1 The Transport Effects	7
2.2 Thermoelectric Refrigerators and Heat Pumps.....	8
2.3 Thermoelectric Generators	13
2.4 Multi-Stage Devices	15
2.5 Application of the Thermomagnetic Effects	17
References.....	21
3 Thermoelectric Properties of Metals and Semiconductors	23
3.1 Transport by Electrons	23
3.2 Metals and Semiconductors	29
3.3 Bipolar Effects	34
3.4 Phonon Conduction.....	36
3.5 Phonon Drag	39
References.....	41
4 Optimisation and Selection of Semiconductor Thermoelements	43
4.1 Power Factor	43
4.2 The Materials Parameter, β	44
4.3 Mobility and Effective Mass	46
4.4 The Lattice Thermal Conductivity in Pure Crystals	47
4.5 The Effect of Temperature	50
4.6 The Importance of the Energy Gap	51
4.7 Non-Parabolic Bands	53

4.8	Thermomagnetic Materials	55
4.9	Superconductors as Passive Thermoelements	60
	References	61
5	Minimising the Thermal Conductivity	63
5.1	Semiconductor Solid Solutions	63
5.2	Phonon Scattering by Point Defects	64
5.3	Boundary Scattering	70
5.4	Scattering of Electrons and Phonons	72
5.5	Fine-Grained Material with Large Unit Cells	74
5.6	Phonon-Glass Electron-Crystal	76
	References	78
6	The Improvement of a Specific Material – Bismuth Telluride	79
6.1	Pure Bismuth Telluride	79
6.2	Band Structure of Bismuth Telluride	82
6.3	Diffusion in Bismuth Telluride	86
6.4	Solid Solutions Based on Bismuth Telluride	87
6.5	Practical Developments	90
6.6	Extension of the Temperature Range	93
6.7	Recent Advances	96
	References	97
7	Methods for the Production of Materials	99
7.1	General Principles	99
7.2	Growth From the Melt	100
7.3	Sintering	105
7.4	Thick and Thin films	109
	References	110
8	Measurement Techniques	113
8.1	General Considerations	113
8.2	Electrical Conductivity	114
8.3	Seebeck Coefficient	118
8.4	Thermal Conductivity	121
8.5	Thermal Diffusivity	126
8.6	The Figure of Merit	128
8.7	Thermomagnetic Measurements	135
	References	138
9	Review of Thermoelectric Materials	139
9.1	Bismuth and Bismuth–Antimony	139
9.2	Lead Telluride and Related Compounds	148
9.3	Silicon–Germanium Alloys	151

9.4	Skutterudites and Clathrates	154
9.4.1	Skutterudites	154
9.4.2	Clathrates	156
9.5	Oxides	159
9.6	Other Thermoelectric Materials	160
9.6.1	Zinc Antimonide	160
9.6.2	Half-Heusler Compounds	161
9.6.3	Metal Silicides	162
9.6.4	Boron Carbide	163
	References	164
10	Thermoelectric Modules and Their Application	167
10.1	The Modular Concept	167
10.2	Heat Transfer Problems	171
10.3	Electrical Contact Resistance	174
10.4	Applications of the Peltier Effect	176
10.5	Transient Cooling	179
10.6	Seebeck Devices	182
	References	188
11	Transverse Devices	191
11.1	Features of Transverse Coolers and Generators	191
11.2	Synthetic Transverse Thermoelements	192
11.3	Materials for Transverse Thermoelements	195
11.4	Alternative Configurations	200
	References	201
12	Properties of Nanostructured Materials	203
12.1	Theory of Nanostructures	203
12.2	Thermal Conduction in Low-Dimensional Materials	208
12.3	Observations on Nanostructures	213
12.4	Preparation of Nanostructures	216
	References	219
13	Thermionic Energy Conversion	221
13.1	Vacuum Thermoelements	221
13.2	Thermionic Emission in Solids	228
	References	233
	Bibliography	235
	Index	237
	Index of Elements, Compounds and Alloys	241
