List of Figures.....	IV
List of Tables.....	VII
Notation.....	VIII
Abbreviations.....	VIII
Latin Symbols.....	IX
Greek symbols.....	XI
Kurzfassung.....	XIII
Abstract.....	XV
1 Introduction.....	1
2 State of the art.....	5
2.1. Raman spectroscopy.....	5
2.1.1. Raman effect.....	6
2.1.2. Simulation of Raman spectra.....	13
2.2. Indirect Hard Modeling.....	16
2.2.1. Framework of Indirect Hard Modeling.....	17
2.2.1.1. Generation of spectral mixture model.....	17
2.2.1.2. Linear calibration model.....	19
2.2.1.3. Analysis of unknown spectra.....	21
2.2.2. Existing extensions for IHM.....	21
2.2.2.1. Automated generation of pure component models and mixture models.....	21
2.2.2.2. Treatment of background signals.....	23
2.2.2.3. Missing pure component models.....	25
2.2.2.4. Unavailable calibration spectra.....	27
2.3. Contribution of this thesis.....	27
3 User-independent setup of mixture models for IHM using MAGIC.....	31
3.1. Method for Automatically Generated Indirect Hard Models using Crossvalidation (MAGIC).....	32
3.1.1. Principle of MAGIC.....	34
3.1.2. Optimization of numbers of peak functions.....	37
3.2. Experimental.....	37
3.3. Results & Discussion.....	39
3.3.1. Number and positions of peak functions for pure component models.....	39

3.3.2. Adjustable peak parameters for the mixture model	41
3.3.3. Joint Optimization of number of peak functions and adjustable peak parameters	47
3.4. Conclusion	49
4 User-independent recovery of spectral features from complex background signals using IHM and UNMASK	51
4.1. UNMASK principle	53
4.1.1. Parametrization of the UNMASK baseline	58
4.2. Experimental	62
4.3. Results & Discussion	66
4.3.1. Application Scenario 1: Slowly varying broadband background signals with external calibration	67
4.3.2. Application Scenario 2: Complex background signal with internal calibration	69
4.3.3. Application Scenario 3: Biological system with unspecified components and fluorescence	72
4.4. Conclusion	74
5 Quantitative analysis of mixture spectra with unavailable experimental calibration data using AIMD-IHM	77
5.1. AIMD-IHM principle	79
5.1.1. Missing-PCS	81
5.1.2. aixcalibration — ab initio-extended calibration	84
5.2. Experimental	85
5.3. Results & Discussion	86
5.3.1. missing-PCS results	86
5.3.2. aixcalibration results	88
5.3.3. AIMD-IHM combination results	90
5.4. Conclusion	91
6 Summary and Outlook	93
6.1. Summary	93
6.2. Perspectives for Future Work	96
References	99
Appendix	107
A MAGIC - Detailed description of MAGIC	107
B MAGIC - Influence of the starting value for the area parameter α on the final results	109
C MAGIC - Influence of ω on the final results	110

Contents

D	MAGIC - Influence of ϵ , Δy and Δx during the identification of peak functions on the final results	111
