Chapter 1. The Tractrix and Similar Curves	1
1.1 Introduction	1
1.2 The Classical Tractrix	1
1.3 The Child and the Toy	3
1.4 The Jogger and the Dog	6
1.5 Showing the Movements with MATLAB	11
References	14
Chapter 2. Trajectory of a Spinning Tennis Ball . . .	15
2.1 Introduction	15
2.2 MAPLE Solution	17
2.3 MATLAB Solution	21
References	23
Chapter 3. The Illumination Problem	25
3.1 Introduction	25
3.2 Finding the Minimal Illumination Point on a Road	26
3.3 Varying h_2 to Maximize the Illumination	29
3.4 Optimal Illumination	31
3.5 Conclusion	34
References	35
Chapter 4. Orbits in the Planar Three-Body Problem . . .	37
4.1 Introduction	37
4.2 Equations of Motion in Physical Coordinates	38
4.3 Global Regularization	42
4.4 The Pythagorean Three-Body Problem	48
4.5 Conclusions	55
References	57
Chapter 5. The Internal Field in Semiconductors . .	59
5.1 Introduction	59
5.2 Solving a Nonlinear Poisson Equation Using MAPLE	60
5.3 MATLAB Solution	66
References	67

Chapter 6. Some Least Squares Problems	69
6.1 Introduction	69
6.2 Fitting Lines, Rectangles and Squares in the Plane	69
6.3 Fitting Hyperplanes	81
References	87
 Chapter 7. The Generalized Billiard Problem	 89
7.1 Introduction	89
7.2 The Generalized Reflection Method	89
7.2.1 Line and Curve Reflection	90
7.2.2 Mathematical Description	91
7.2.3 MAPLE Solution	92
7.3 The Shortest Trajectory Method	93
7.3.1 MAPLE Solution	94
7.4 Examples	94
7.4.1 The Circular Billiard Table	94
7.4.2 The Elliptical Billiard Table	98
7.4.3 The Snail Billiard Table	100
7.4.4 The Star Billiard Table	102
7.5 Conclusions	105
References	107
 Chapter 8. Mirror Curves	 109
8.1 The Interesting Waste	109
8.2 The Mirror Curves Created by MAPLE	109
8.3 The Inverse Problem	110
8.3.1 Outflanking Manoeuvre	110
8.3.2 Geometrical Construction of a Point on the Pattern Curve	112
8.3.3 MAPLE Solution	113
8.3.4 Analytic Solution	114
8.4 Examples	114
8.4.1 The Circle as the Mirror Curve	114
8.4.2 The Line as the Mirror Curve	117
8.5 Conclusions	118
References	120
 Chapter 9. Smoothing Filters	 121
9.1 Introduction	121
9.2 Savitzky-Golay Filter	121
9.2.1 Filter Coefficients	122
9.2.2 Results	125
9.3 Least Squares Filter	126

9.3.1	Lagrange Equations	127
9.3.2	Zero Finder	129
9.3.3	Evaluation of the Secular Function	130
9.3.4	MEX-Files	132
9.3.5	Results	136
	References	138
Chapter 10.	The Radar Problem	141
10.1	Introduction	141
10.2	Converting Degrees into Radians	142
10.3	Transformation of Geographical into Geocentric Co-ordinates	143
10.4	The Transformations	146
10.5	Final Algorithm	148
10.6	Practical Example	150
	References	151
Chapter 11.	Conformal Mapping of a Circle	153
11.1	Introduction	153
11.2	Problem Outline	153
11.3	MAPLE Solution	154
	References	159
Chapter 12.	The Spinning Top	161
12.1	Introduction	161
12.2	Formulation and Basic Analysis of the Solution	163
12.3	The Numerical Solution	168
	References	171
Chapter 13.	The Calibration Problem	173
13.1	Introduction	173
13.2	The Physical Model Description	173
13.3	Approximation by Splitting the Solution	176
13.4	Conclusions	182
	References	182
Chapter 14.	Heat Flow Problems	183
14.1	Introduction	183
14.2	Heat Flow through a Spherical Wall	183
14.2.1	A Steady State Heat Flow Model	184
14.2.2	Fourier Model for Steady State	185
14.2.3	MAPLE Plots	186
14.3	Non Stationary Heat Flow through an Agriculture Field	187
14.3.1	MAPLE Plots	191
	References	191

Chapter 15. Penetration of a Long Rod into a Semi-infinite Target	193
15.1 Introduction	193
15.2 Short Description of the Penetration Theory	193
15.3 Numerical Example	198
15.4 Conclusions	201
References	202
 Chapter 16. Heat Capacity of System of Bose Particles	203
16.1 Introduction	203
16.2 MAPLE Solution	205
References	210
 Chapter 17. Compression of a Metal Disk	211
17.1 Introduction	211
17.2 Mathematical and Physical Model	211
17.3 Parabolic Perimeter	213
17.4 MAPLE Solution	213
17.5 Base Radius as Function of Friction	214
17.6 Simplification	215
17.7 Graphics	216
17.8 Conclusions	219
References	219
 Chapter 18. Gauss Quadrature	221
18.1 Introduction	221
18.2 Orthogonal Polynomials	222
18.3 Quadrature Rule	236
18.4 Gauss Quadrature Rule	237
18.5 Gauss-Radau Quadrature Rule	238
18.6 Gauss-Lobatto Quadrature Rule	241
18.7 Weights	244
18.8 Quadrature Error	245
References	247
 Chapter 19. Symbolic Computation of Explicit Runge-Kutta Formulas	251
19.1 Introduction	251
19.2 Derivation of the Equations for the Parameters	253
19.3 Solving the System of Equations	255
19.3.1 Gröbner Bases	256
19.3.2 Resultants	259
19.4 The Complete Algorithm	261
19.4.1 Example 1:	262

<i>CONTENTS</i>	xiii
19.4.2 Example 2:	263
19.5 Conclusions	265
References	266
Index	267
