Part I. Introduction

Prologue	1
1. Historical Introduction	21
1.1 The Revolution of Physics	22
1.2 Quantization in a Nutshell.....	27
1.2.1 Basic Formulas.....	30
1.2.2 The Fundamental Role of the Harmonic Oscillator in Quantum Field Theory	46
1.2.3 Quantum Fields and Second Quantization	52
1.2.4 The Importance of Functional Integrals	57
1.3 The Role of Göttingen	60
1.4 The Göttingen Tragedy	67
1.5 Highlights in the Sciences.....	69
1.5.1 The Nobel Prize.....	69
1.5.2 The Fields Medal in Mathematics	71
1.5.3 The Nevanlinna Prize in Computer Sciences	72
1.5.4 The Gauss Prize in Mathematics	73
1.5.5 The Wolf Prize in Physics	73
1.5.6 The Wolf Prize in Mathematics	74
1.5.7 The Abel Prize in Mathematics	75
1.6 The Emergence of Physical Mathematics – a New Dimension of Mathematics	75
1.7 The Seven Millennium Prize Problems of the Clay Mathematics Institute.....	78
2. Phenomenology of the Standard Model for Elementary Particles	81
2.1 The System of Units	82
2.2 Waves in Physics	83
2.2.1 Harmonic Waves	83
2.2.2 Wave Packets	84
2.2.3 Standing Waves	86
2.2.4 Electromagnetic Waves.....	87

2.2.5	Superposition of Waves and the Fourier Transform ..	88
2.2.6	Damped Waves, the Laplace Transform, and Dispersion Relations	91
2.2.7	The Response Function, the Feynman Propagator, and Causality	96
2.3	Historical Background	99
2.3.1	Planck's Radiation Law	103
2.3.2	The Boltzmann Statistics and Planck's Quantum Hypothesis	108
2.3.3	Einstein's Theory of Special Relativity	111
2.3.4	Einstein's Theory of General Relativity	113
2.3.5	Einstein's Light Particle Hypothesis	114
2.3.6	Rutherford's Particle Scattering	115
2.3.7	The Cross Section for Compton Scattering	117
2.3.8	Bohr's Model of the Hydrogen Atom	122
2.3.9	Einstein's Radiation Law and Laser Beams	126
2.3.10	Quantum Computers	128
2.4	The Standard Model in Particle Physics	129
2.4.1	The Four Fundamental Forces in Nature	129
2.4.2	The Fundamental Particles in Nature	132
2.5	Magic Formulas	142
2.6	Quantum Numbers of Elementary Particles	145
2.6.1	The Spin	146
2.6.2	Conservation of Quantum Numbers	156
2.7	The Fundamental Role of Symmetry in Physics	164
2.7.1	Classical Symmetries	170
2.7.2	The CPT Symmetry Principle for Elementary Particles	172
2.7.3	Local Gauge Symmetry	176
2.7.4	Permutations and Pauli's Exclusion Principle	178
2.7.5	Crossing Symmetry	178
2.7.6	Forbidden Spectral Lines in Molecules	179
2.8	Symmetry Breaking	180
2.8.1	Parity Violation and CP Violation	180
2.8.2	Irreversibility	181
2.8.3	Splitting of Spectral Lines in Molecules	181
2.8.4	Spontaneous Symmetry Breaking and Particles	182
2.8.5	Bifurcation and Phase Transitions	184
2.9	The Structure of Interactions in Nature	185
2.9.1	The Electromagnetic Field as Generalized Curvature	185
2.9.2	Physics and Modern Differential Geometry	186

3. The Challenge of Different Scales in Nature	189
3.1 The Trouble with Scale Changes	189
3.2 Wilson's Renormalization Group in Physics	191
3.2.1 A New Paradigm in Physics	193
3.2.2 Screening of the Coulomb Field and the Renormalization Group of Lie Type	195
3.2.3 The Running Coupling Constant and the Asymptotic Freedom of Quarks	203
3.2.4 The Quark Confinement	206
3.2.5 Proton Decay and Supersymmetric Grand Unification	207
3.2.6 The Adler-Bell-Jackiw Anomaly	207
3.3 Stable and Unstable Manifolds	208
3.4 A Glance at Conformal Field Theories	209

Part II. Basic Techniques in Mathematics

4. Analyticity	211
4.1 Power Series Expansion	212
4.2 Deformation Invariance of Integrals	214
4.3 Cauchy's Integral Formula	214
4.4 Cauchy's Residue Formula and Topological Charges	215
4.5 The Winding Number	216
4.6 Gauss' Fundamental Theorem of Algebra	217
4.7 Compactification of the Complex Plane	219
4.8 Analytic Continuation and the Local-Global Principle	220
4.9 Integrals and Riemann Surfaces	221
4.10 Domains of Holomorphy	225
4.11 A Glance at Analytic S-Matrix Theory	226
4.12 Important Applications	227
5. A Glance at Topology	229
5.1 Local and Global Properties of the Universe	229
5.2 Bolzano's Existence Principle	230
5.3 Elementary Geometric Notions	232
5.4 Manifolds and Diffeomorphisms	236
5.5 Topological Spaces, Homeomorphisms, and Deformations	237
5.6 Topological Quantum Numbers	243
5.6.1 The Genus of a Surface	243
5.6.2 The Euler Characteristic	244
5.6.3 Platonic Solids and Fullerenes	246
5.6.4 The Poincaré-Hopf Theorem for Velocity Fields	247
5.6.5 The Gauss-Bonnet Theorem	248
5.6.6 The Morse Theorem on Critical Points of Energy Functions	252

5.6.7	Magnetic Fields, the Gauss Integral, and the Linking Number	253
5.6.8	Electric Fields, the Kronecker Integral, and the Mapping Degree.....	255
5.6.9	The Heat Kernel and the Atiyah–Singer Index Theorem	259
5.6.10	Knots and Topological Quantum Field Theory	264
5.7	Quantum States	267
5.7.1	The Topological Character of the Electron Spin	267
5.7.2	The Hopf Fibration of the 3-Dimensional Sphere	270
5.7.3	The Homotopy Functor	273
5.7.4	Grassmann Manifolds and Projective Geometry	276
5.8	Perspectives	277
6.	Many-Particle Systems in Mathematics and Physics	279
6.1	Partition Function in Statistical Physics	281
6.2	Euler’s Partition Function	285
6.3	Discrete Laplace Transformation	287
6.4	Integral Transformations	291
6.5	The Riemann Zeta Function	293
6.5.1	The Prime Number Theorem – a Pearl of Mathematics	293
6.5.2	The Riemann Hypothesis	298
6.5.3	Dirichlet’s L -Function.....	298
6.6	The Casimir Effect in Quantum Field Theory and the Epstein Zeta Function	301
6.7	Appendix: The Mellin Transformation and Other Useful Analytic Techniques by Don Zagier	307
6.7.1	The Generalized Mellin Transformation	307
6.7.2	Dirichlet Series and their Special Values	311
6.7.3	Application: the Casimir Effect.....	314
6.7.4	Asymptotics of Series of the Form $\sum f(nt)$	319
7.	Rigorous Finite-Dimensional Magic Formulas of Quantum Field Theory	327
7.1	Geometrization of Physics	327
7.2	Ariadne’s Thread in Quantum Field Theory	328
7.3	Linear Spaces	330
7.4	Finite-Dimensional Hilbert Spaces	337
7.5	Groups.....	342
7.6	Lie Algebras	344
7.7	Lie’s Logarithmic Trick for Matrix Groups	347
7.8	Lie Groups	349
7.9	Basic Notions in Quantum Physics.....	351
7.9.1	States, Costates, and Observables	352
7.9.2	Observers and Coordinates	356

7.10	Fourier Series	357
7.11	Dirac Calculus in Finite-Dimensional Hilbert Spaces	361
7.12	The Trace of a Linear Operator	365
7.13	Banach Spaces	368
7.14	Probability and Hilbert's Spectral Family of an Observable ..	370
7.15	Transition Probabilities, S -Matrix, and Unitary Operators ..	372
7.16	The Magic Formulas for the Green's Operator.....	374
	7.16.1 Non-Resonance and Resonance	375
	7.16.2 Causality and the Laplace Transform	379
7.17	The Magic Dyson Formula for the Retarded Propagator	383
	7.17.1 Lagrange's Variation of the Parameter	385
	7.17.2 Duhamel's Principle	387
	7.17.3 The Volterra Integral Equation.....	388
	7.17.4 The Dyson Series.....	390
7.18	The Magic Dyson Formula for the S -Matrix	392
7.19	Canonical Transformations	394
	7.19.1 The Schrödinger Picture	394
	7.19.2 The Heisenberg Picture	395
	7.19.3 The Dirac Interaction Picture.....	396
7.20	Functional Calculus.....	397
	7.20.1 Functional Derivatives	398
	7.20.2 Partial Functional Derivatives.....	404
	7.20.3 Infinitesimal Transformations	411
	7.20.4 Functional Integration	418
7.21	The Discrete Feynman Path Integral	418
	7.21.1 The Magic Feynman Propagator Formula.....	419
	7.21.2 The Magic Formula for Time-Ordered Products	424
	7.21.3 The Trace Formula	425
7.22	Causal Correlation Functions	426
	7.22.1 The Wick Rotation Trick for Vacuum Expectation Values	427
	7.22.2 The Magic Gell-Mann-Low Reduction Formula	429
7.23	The Magic Gaussian Integral.....	430
	7.23.1 The One-Dimensional Prototype	430
	7.23.2 The Determinant Trick.....	436
	7.23.3 The Zeta Function Trick	436
	7.23.4 The Moment Trick	437
	7.23.5 The Method of Stationary Phase	437
7.24	The Rigorous Response Approach to Finite Quantum Fields	440
	7.24.1 Basic Ideas	441
	7.24.2 Discrete Space-Time Manifold	443
	7.24.3 The Principle of Critical Action	447
	7.24.4 The Response Function	448
	7.24.5 The Global Quantum Action Principle	449

7.24.6	The Magic Quantum Action Reduction Formula for Correlation Functions	450
7.24.7	The Magic LSZ Reduction Formula for Scattering Functions	451
7.24.8	The Local Quantum Action Principle	455
7.24.9	Simplifying the Computation of Quantum Effects....	458
7.24.10	Reduced Correlation Functions.....	458
7.24.11	The Mean Field Approximation	459
7.24.12	Vertex Functions and the Effective Action	461
7.25	The Discrete φ^4 -Model and Feynman Diagrams	463
7.26	The Extended Response Approach	481
7.27	Complex-Valued Fields	486
7.28	The Method of Lagrange Multipliers	490
7.29	The Formal Continuum Limit	495
8.	Rigorous Finite-Dimensional Perturbation Theory	499
8.1	Renormalization	499
8.1.1	Non-Resonance	499
8.1.2	Resonance, Regularizing Term, and Bifurcation	501
8.1.3	The Renormalization Group	504
8.1.4	The Main Bifurcation Theorem	505
8.2	The Rellich Theorem	508
8.3	The Trotter Product Formula	509
8.4	The Magic Baker–Campbell–Hausdorff Formula	510
8.5	Regularizing Terms	511
8.5.1	The Weierstrass Product Theorem	512
8.5.2	The Mittag–Leffler Theorem	512
8.5.3	Regularization of Divergent Integrals.....	513
8.5.4	The Polchinski Equation	515
9.	Fermions and the Calculus for Grassmann Variables	517
9.1	The Grassmann Product	517
9.2	Differential Forms	518
9.3	Calculus for One Grassmann Variable	518
9.4	Calculus for Several Grassmann Variables	519
9.5	The Determinant Trick	520
9.6	The Method of Stationary Phase	521
9.7	The Fermionic Response Model	521
10.	Infinite-Dimensional Hilbert Spaces.....	523
10.1	The Importance of Infinite Dimensions in Quantum Physics.	523
10.1.1	The Uncertainty Relation	523
10.1.2	The Trouble with the Continuous Spectrum	526
10.2	The Hilbert Space $L_2(\Omega)$	527
10.2.1	Measure and Integral	529

10.2.2	Dirac Measure and Dirac Integral	531
10.2.3	Lebesgue Measure and Lebesgue Integral	532
10.2.4	The Fischer–Riesz Theorem	533
10.3	Harmonic Analysis	534
10.3.1	Gauss’ Method of Least Squares.....	534
10.3.2	Discrete Fourier Transform	535
10.3.3	Continuous Fourier Transform	537
10.4	The Dirichlet Problem in Electrostatics as a Paradigm	542
10.4.1	The Variational Lemma	544
10.4.2	Integration by Parts	546
10.4.3	The Variational Problem	549
10.4.4	Weierstrass’ Counterexample.....	551
10.4.5	Typical Difficulties	554
10.4.6	The Functional Analytic Existence Theorem	557
10.4.7	Regularity of the Solution	560
10.4.8	The Beauty of the Green’s Function	562
10.4.9	The Method of Orthogonal Projection	566
10.4.10	The Power of Ideas in Mathematics.....	569
10.4.11	The Ritz Method.....	570
10.4.12	The Main Existence Principle	571
11.	Distributions and Green’s Functions	577
11.1	Rigorous Basic Ideas	581
11.1.1	The Discrete Dirac Delta Function	582
11.1.2	Prototypes of Green’s Functions.....	583
11.1.3	The Heat Equation and the Heat Kernel	589
11.1.4	The Diffusion Equation	591
11.1.5	The Schrödinger Equation and the Euclidean Approach	591
11.2	Dirac’s Formal Approach	592
11.2.1	Dirac’s Delta Function	593
11.2.2	Density of a Mass Distribution	594
11.2.3	Local Functional Derivative.....	594
11.2.4	The Substitution Rule	598
11.2.5	Formal Dirac Calculus and the Fourier Transform ...	599
11.2.6	Formal Construction of the Heat Kernel.....	609
11.3	Laurent Schwartz’s Rigorous Approach	610
11.3.1	Physical Measurements and the Idea of Averaging ...	610
11.3.2	Distributions	611
11.3.3	Tempered Distributions	617
11.3.4	The Fourier Transform	620
11.4	Hadamard’s Regularization of Integrals.....	621
11.4.1	Regularization of Divergent Integrals.....	621
11.4.2	The Sokhotski Formula	622
11.4.3	Steinmann’s Renormalization Theorem.....	623

11.4.4	Regularization Terms	625
11.5	Renormalization of the Anharmonic Oscillator	628
11.5.1	Renormalization in a Nutshell	628
11.5.2	The Linearized Problem	628
11.5.3	The Nonlinear Problem and Non-Resonance	632
11.5.4	The Nonlinear Problem, Resonance, and Bifurcation .	633
11.5.5	The Importance of the Renormalized Green's Function	635
11.5.6	The Renormalization Group	636
11.6	The Importance of Algebraic Feynman Integrals	637
11.6.1	Wick Rotation and Cut-Off	637
11.6.2	Dimensional Regularization	639
11.6.3	Weinberg's Power-Counting Theorem	641
11.6.4	Integration Tricks	643
11.7	Fundamental Solutions of Differential Equations	647
11.7.1	The Newtonian Potential	649
11.7.2	The Existence Theorem	649
11.7.3	The Beauty of Hironaka's Theorem	650
11.8	Functional Integrals	654
11.8.1	The Feynman Path Integral for the Heat Equation...	654
11.8.2	Diffusion, Brownian Motion, and the Wiener Integral	657
11.8.3	The Method of Quantum Fluctuations	658
11.8.4	Infinite-Dimensional Gaussian Integrals and Zeta Function Regularization	660
11.8.5	The Euclidean Trick and the Feynman Path Integral for the Schrödinger Equation	661
11.9	A Glance at Harmonic Analysis	663
11.9.1	The Fourier–Laplace Transform	663
11.9.2	The Riemann–Hilbert Problem	665
11.9.3	The Hilbert Transform	666
11.9.4	Symmetry and Special Functions	667
11.9.5	Tempered Distributions as Boundary Values of Ana- lytic Functions	668
11.10	The Trouble with the Euclidean Trick	669
12.	Distributions and Physics	671
12.1	The Discrete Dirac Calculus	671
12.1.1	Lattices	671
12.1.2	The Four-Dimensional Discrete Dirac Delta Function	672
12.1.3	Rigorous Discrete Dirac Calculus	675
12.1.4	The Formal Continuum Limit	675
12.2	Rigorous General Dirac Calculus	677
12.2.1	Eigendistributions	677
12.2.2	Self-Adjoint Operators	679
12.2.3	The von Neumann Spectral Theorem	680
12.2.4	The Gelfand–Kostyuchenko Spectral Theorem	681

12.2.5	The Duality Map	681
12.2.6	Dirac's Notation	683
12.2.7	The Schwartz Kernel Theorem	683
12.3	Fundamental Limits in Physics	684
12.3.1	High-Energy Limit	684
12.3.2	Thermodynamic Limit and Phase Transitions	685
12.3.3	Adiabatic Limit	687
12.3.4	Singular Limit	691
12.4	Duality in Physics	692
12.4.1	Particles and de Broglie's Matter Waves	692
12.4.2	Time and Frequency	694
12.4.3	Time and Energy	694
12.4.4	Position and Momentum	695
12.4.5	Causality and Analyticity	697
12.4.6	Strong and Weak Interaction	705
12.5	Microlocal Analysis	705
12.5.1	Singular Support of a Distribution	707
12.5.2	Wave Front Set	708
12.5.3	The Method of Stationary Phase	717
12.5.4	Short-Wave Asymptotics for Electromagnetic Waves	720
12.5.5	Diffraction of Light	726
12.5.6	Pseudo-Differential Operators	730
12.5.7	Fourier Integral Operators	731
12.6	Multiplication of Distributions	732
12.6.1	Laurent Schwartz's Counterexample	732
12.6.2	Hörmander's Causal Product	734

Part III. Heuristic Magic Formulas of Quantum Field Theory

13.	Basic Strategies in Quantum Field Theory	741
13.1	The Method of Moments and Correlation Functions	744
13.2	The Power of the S -Matrix	747
13.3	The Relation Between the S -Matrix and the Correlation Functions	748
13.4	Perturbation Theory and Feynman Diagrams	749
13.5	The Trouble with Interacting Quantum Fields	750
13.6	External Sources and the Generating Functional	751
13.7	The Beauty of Functional Integrals	754
13.7.1	The Principle of Critical Action	754
13.7.2	The Magic Feynman Representation Formula	755
13.7.3	Perturbation Theory	756
13.7.4	Renormalization	757
13.7.5	Transition Amplitudes	757

13.7.6	The Magic Trace Formula	758
13.8	Quantum Field Theory at Finite Temperature	759
13.8.1	The Partition Function	759
13.8.2	The Classical Hamiltonian Approach	762
13.8.3	The Magic Feynman Functional Integral for the Partition Function	763
13.8.4	The Thermodynamic Limit	765
14.	The Response Approach	767
14.1	The Fourier–Minkowski Transform	772
14.2	The φ^4 -Model	775
14.2.1	The Classical Principle of Critical Action	776
14.2.2	The Response Function and the Feynman Propagator	776
14.2.3	The Extended Quantum Action Functional	784
14.2.4	The Magic Quantum Action Reduction Formula for Correlation Functions	784
14.2.5	The Magic LSZ Reduction Formula for the S -Matrix	787
14.2.6	The Local Quantum Action Principle	789
14.2.7	The Mnemonic Functional Integral	789
14.2.8	Bose–Einstein Condensation of Dilute Gases	790
14.3	A Glance at Quantum Electrodynamics	791
14.3.1	The Equations of Motion	793
14.3.2	The Principle of Critical Action	795
14.3.3	The Gauge Field Approach	796
14.3.4	The Extended Action Functional with Source Term ..	800
14.3.5	The Response Function for Photons	801
14.3.6	The Response Function for Electrons	802
14.3.7	The Extended Quantum Action Functional	803
14.3.8	The Magic Quantum Action Reduction Formula	805
14.3.9	The Mnemonic Functional Integral	806
15.	The Operator Approach	815
15.1	The φ^4 -Model	816
15.1.1	The Lattice Approximation	817
15.1.2	Fourier Quantization	819
15.1.3	The Free 2-Point Green’s Function	822
15.1.4	The Magic Dyson Formula for the S -Matrix	824
15.1.5	The Main Wick Theorem	826
15.1.6	Transition Amplitude	831
15.1.7	Transition Probability	839
15.1.8	Scattering Cross Section	841
15.1.9	General Feynman Rules for Particle Scattering	845
15.1.10	The Magic Gell-Mann–Low Reduction Formula for Green’s Functions	847
15.2	A Glance at Quantum Electrodynamics	848

15.3	The Role of Effective Quantities in Physics	849
15.4	A Glance at Renormalization	850
15.4.1	The Trouble with the Continuum Limit	852
15.4.2	Basic Ideas of Renormalization	852
15.4.3	The BPHZ Renormalization	855
15.4.4	The Epstein–Glaser Approach	856
15.4.5	Algebraic Renormalization	860
15.4.6	The Importance of Hopf Algebras	861
15.5	The Convergence Problem in Quantum Field Theory	862
15.5.1	Dyson’s No-Go Argument	862
15.5.2	The Power of the Classical Ritt Theorem in Quantum Field Theory	863
15.6	Rigorous Perspectives	864
15.6.1	Axiomatic Quantum Field Theory	868
15.6.2	<i>The Euclidean Strategy in Constructive Quantum Field Theory</i>	872
15.6.3	The Renormalization Group Method	874
16.	Peculiarities of Gauge Theories	879
16.1	Basic Difficulties	879
16.2	The Principle of Critical Action	880
16.3	The Language of Physicists	886
16.4	The Importance of the Higgs Particle	888
16.5	Integration over Orbit Spaces	888
16.6	The Magic Faddeev–Popov Formula and Ghosts	890
16.7	The BRST Symmetry	892
16.8	The Power of Cohomology	893
16.8.1	Physical States, Unphysical States, and Cohomology ..	895
16.8.2	Forces and Potentials	896
16.8.3	The Cohomology of Geometric Objects	898
16.8.4	The Spectra of Atoms and Cohomology	901
16.8.5	BRST Symmetry and the Cohomology of Lie Groups ..	902
16.9	The Batalin–Vilkovisky Formalism	905
16.10	A Glance at Quantum Symmetries	906
17.	A Panorama of the Literature	909
17.1	Introduction to Quantum Field Theory	909
17.2	Quantum Gravity and Cosmology	916
17.3	Exactly Soluble Models in Statistical Physics and Quantum Field Theory	918
17.4	Standard References in Quantum Field Theory	920
17.5	Rigorous Approaches to Quantum Field Theory	921
17.6	The Fascinating Interplay between Modern Physics and Math- ematics	924
17.7	The Monster Group, Vertex Algebras, and Physics	935

17.8 Historical Development of Quantum Field Theory	940
17.9 General Literature in Mathematics and Physics	941
17.10 Encyclopedias.....	942
17.11 Highlights of Physics in the 20th Century	943
17.12 Actual Information	944
Appendix	947
A.1 Notation	947
A.2 The International System of Units	950
A.3 The Planck System	952
A.4 The Energetic System.....	958
A.5 The Beauty of Dimensional Analysis	960
A.6 The Similarity Principle in Physics	962
Epilogue	971
References	975
List of Symbols	1021
Index	1025
