

Contents

1	Principles of Semiconductor Physics	1
1.1	Crystal Structure	1
1.2	Energy Levels in Solids	3
1.3	Optical Properties	7
1.4	Density of States and Carrier Concentrations	10
1.4.1	Intrinsic Semiconductors	13
1.4.2	Doped Semiconductors	14
1.5	Carrier Transport Phenomena	16
1.6	Excitation and Recombination of Charge Carriers	18
1.7	Fermi Levels under Non-Equilibrium Conditions	20
2	Semiconductor Surfaces and Solid – Solid Junctions	22
2.1	Metal and Semiconductor Surfaces in a Vacuum	22
2.2	Metal–Semiconductor Contacts (Schottky Junctions)	24
2.2.1	Barrier Heights	25
2.2.2	Majority Carrier Transfer Processes	29
2.2.3	Minority Carrier Transfer Processes	33
2.3	p–n Junctions	36
2.4	Ohmic Contacts	39
2.5	Photovoltages and Photocurrents	41
2.6	Surface Recombination	44
3	Electrochemical Systems	46
3.1	Electrolytes	46
3.1.1	Ion Transport in Solutions	46
3.1.2	Interaction between Ions and Solvent	48
3.2	Potentials and Thermodynamics of Electrochemical Cells	50
3.2.1	Chemical and Electrochemical Potentials	50
3.2.2	Cell Voltages	53
3.2.3	Reference Potentials	55
3.2.4	Standard Potential and Fermi Level of Redox Systems	56
4	Experimental Techniques	61
4.1	Electrode Preparation	61
4.2	Current–Voltage Measurements	61
4.2.1	Voltametry	61
4.2.2	Photocurrent Measurements	63
4.2.3	Rotating Ring Disc Electrodes	63
4.2.4	Scanning Electrochemical Microscopy (SECM)	64
4.3	Measurements of Surface Recombination and Minority Carrier Injection	65
4.4	Impedance Measurements	67

4.4.1	Basic Rules and Techniques	67
4.4.2	Evaluation of Impedance Spectra	69
4.5	Intensity-Modulated Photocurrent Spectroscopy (IMPS)	74
4.6	Flash Photolysis Investigations	75
4.7	Surface Science Techniques	76
4.7.1	Spectroscopic Methods	76
4.7.2	In Situ Surface Microscopy (STM and AFM)	78
5	Solid–Liquid Interface	81
5.1	Structure of the Interface and Adsorption	81
5.2	Charge and Potential Distribution at the Interface	83
5.2.1	The Helmholtz Double Layer	83
5.2.2	The Gouy Layer in the Electrolyte	85
5.2.3	The Space Charge Layer in the Semiconductor	86
5.2.4	Charge Distribution in Surface States	92
5.3	Analysis of the Potential Distribution	93
5.3.1	Germanium Electrodes	93
5.3.2	Silicon Electrodes	99
5.3.3	Compound Semiconductor Electrodes	100
5.3.4	Flatband Potential and Position of Energy Bands at the Interface . . .	102
5.3.5	Unpinning of Energy Bands during Illumination	107
6	Electron Transfer Theories	112
6.1	The Theory of Marcus	112
6.1.1	Electron Transfer in Homogeneous Solutions	112
6.1.2	The Reorganization Energy	116
6.1.3	Adiabatic and Non-adiabatic Reactions	118
6.1.4	Electron Transfer Processes at Electrodes	119
6.2	The Gerischer Model	122
6.2.1	Energy States in Solution	122
6.2.2	Electron Transfer	127
6.3	Quantum Mechanical Treatments of Electron Transfer Processes . . .	129
6.3.1	Introductory Comments	129
6.3.2	Non-adiabatic Reactions	133
6.3.3	Adiabatic Reactions	139
6.4	The Problem of Deriving Rate Constants	147
6.5	Comparison of Theories	149
7	Charge Transfer Processes at the Semiconductor–Liquid Interface . . .	151
7.1	Charge Transfer Processes at Metal Electrodes	151
7.1.1	Kinetics of Electron Transfer at the Metal–Liquid Interface	151
7.1.2	Diffusion-controlled Processes	159
7.1.3	Investigations of Redox Reactions by Linear Sweep Voltametry	163
7.1.4	Criteria for Reversible and Irreversible Reactions	164
7.2	Qualitative Description of Current–Potential Curves at Semiconductor Electrodes	165
7.3	One-step Redox Reactions	167

7.3.1	The Energetics of Charge Transfer Processes	167
7.3.2	Quantitative Derivation of Current–Potential Curves	169
7.3.3	Light-induced Processes	174
7.3.4	Majority Carrier Reactions	178
7.3.5	Minority Carrier Reactions	188
7.3.6	Electron Transfer in the ‘Inverted Region’	199
7.4	The Quasi-Fermi Level Concept	201
7.4.1	Basic Model	201
7.4.2	Application of the Concept to Photocurrents	205
7.4.3	Consequences for the Relation between Impedance and IMPS Spectra	209
7.4.4	Quasi-Fermi Level Positions under High Level Injections	212
7.5	Determination of the Reorganization Energy	214
7.6	Two-step Redox Processes	220
7.7	Photoluminescence and Electroluminescence	225
7.7.1	Kinetic Studies by Photoluminescence Measurement	226
7.7.2	Electroluminescence Induced by Minority Carrier Injection	230
7.8	Hot Carrier Processes	233
7.9	Catalysis of Electrode Reactions	236
8	Electrochemical Decomposition of Semiconductors	241
8.1	Anodic Dissolution Reactions	241
8.1.1	Germanium	241
8.1.2	Silicon	245
8.1.3	Anodic Formation of Amorphous (Porous) Silicon	251
8.1.4	Compound Semiconductors	251
8.2	Cathodic Decomposition	255
8.3	Dissolution under Open Circuit Conditions	255
8.4	Energetics and Thermodynamics of Corrosion	257
8.5	Competition between Redox Reaction and Anodic Dissolution	259
9	Photoreactions at Semiconductor Particles	264
9.1	Quantum Size Effects	264
9.1.1	Quantum Dots	266
9.1.2	Single Crystalline Quantum Films and Superlattices	271
9.1.3	Size Quantized Nanocrystalline Films	274
9.2	Charge Transfer Processes at Semiconductor Particles	274
9.2.1	Reactions in Suspensions and Colloidal Solutions	274
9.2.2	Photoelectron Emission	281
9.2.3	Comparison between Reactions at Semiconductor Particles and at Compact Electrodes	283
9.2.4	The Role of Surface Chemistry	284
9.2.5	Enhanced Redox Chemistry in Quantized Colloids	285
9.2.6	Reaction Routes at Small and Big Particles	289
9.2.7	Sandwich Formation between Different Particles and between Particle and Electrode	290

9.3	Charge Transfer Processes at Quantum Well Electrodes (MQW, SQW)	294
9.4	Photoelectrochemical Reactions at Nanocrystalline Semiconductor Layers	297
10	Electron Transfer Processes between Excited Molecules and Semiconductor Electrodes	300
10.1	Energy Levels of Excited Molecules	300
10.2	Reactions at Semiconductor Electrodes	305
10.2.1	Spectra of Sensitized Photocurrents	305
10.2.2	Dye Molecules Adsorbed on the Electrode and in Solution	309
10.2.3	Potential Dependence of Sensitization Currents	311
10.2.4	Sensitization Processes at Semiconductor Surfaces Modified by Dye Monolayers	313
10.2.5	Quantum Efficiencies, Regeneration and Supersensitization	319
10.2.6	Kinetics of Electron Transfer between Dye and Semiconductor Electrode	321
10.2.7	Sensitization Processes at Nanocrystalline Semiconductor Electrodes	325
10.3	Comparison with Reactions at Metal Electrodes	329
10.4	Production of Excited Molecules by Electron Transfer	330
11	Applications	332
11.1	Photoelectrochemical Solar Energy Conversion	332
11.1.1	Electrochemical Photovoltaic Cells	332
11.1.1.1	Analysis of Systems	336
11.1.1.2	Dye-Sensitized Solar Cells	341
11.1.1.3	Conversion Efficiencies	342
11.1.2	Photoelectrolysis	346
11.1.2.1	Two-Electrode Configurations	347
11.1.2.2	Photochemical Diodes	351
11.1.2.3	Photoelectrolysis Driven by Photovoltaics	353
11.1.2.4	Efficiency	355
11.1.3	Production of Other Fuels	357
11.1.3.1	Photoelectrolysis of H ₂ S	357
11.1.3.2	Photoelectrolysis of Halides	357
11.1.4	Photoreduction of CO ₂	358
11.2	Photocatalytic Reactions	360
11.2.1	Photodegradation of Pollutants	360
11.2.2	Light-Induced Chemical Reactions	363
11.3	Etching of Semiconductors	363
11.4	Light-Induced Metal Deposition	366
	Appendices	369
	References	377
	Subject Index	395
