

1	Very Personal Introduction	1
2	How to Define Differential Operators on Metric Graphs	9
2.1	Schrödinger Operators on Metric Graphs	9
2.1.1	Metric Graphs.....	9
2.1.2	Differential Operators	14
2.1.3	Standard Vertex Conditions	19
2.1.4	Definition of the Operator	20
2.2	Elementary Examples	20
3	Vertex Conditions	29
3.1	Preliminary Discussion	29
3.2	Vertex Conditions for the Star Graph.....	31
3.3	Vertex Conditions Via the Vertex Scattering Matrix	35
3.3.1	The Vertex Scattering Matrix	35
3.3.2	Scattering Matrix as a Parameter in the Vertex Conditions	37
3.3.3	On Properly Connecting Vertex Conditions	38
3.4	Parametrisation Via Hermitian Matrices	41
3.5	Scaling-Invariant and Standard Conditions	42
3.5.1	Energy Dependence of the Vertex S -matrix	42
3.5.2	Scaling-Invariant, or Non-Robin Vertex Conditions	43
3.5.3	Standard Vertex Conditions	44
3.6	Signing Conditions for Degree Two Vertices	47
3.7	Generalised Delta Couplings	48
3.8	Vertex Conditions for Arbitrary Graphs and Definition of the Magnetic Schrödinger Operator	51
3.8.1	Scattering Matrix Parametrisation of Vertex Conditions.....	51
3.8.2	Quadratic Form Parametrisation of Vertex Conditions ...	54
	Appendix 1: Important Classes of Vertex Conditions	55

Appendix 2: Parametrisation of Vertex	
Conditions: Historical Remarks	61
4 Elementary Spectral Properties of Quantum Graphs	65
4.1 Quantum Graphs as Self-adjoint Operators	65
4.2 The Dirichlet Operator and the Weyl's Law	72
4.3 Spectra of Quantum Graphs	76
4.4 Laplacian Ground State	79
4.5 Bonus Section: Positivity of the Ground State	
for Quantum Graphs	81
4.5.1 The Case of Standard Vertex Conditions	81
4.5.2 A Counterexample.....	83
4.5.3 Invariance of the Quadratic Form.....	84
4.5.4 Positivity of the Ground State for Generalised	
Delta-Couplings	89
4.6 First Spectral Estimates	92
5 The Characteristic Equation	97
5.1 Characteristic Equation I: Edge Transfer Matrices	97
5.1.1 Transfer Matrix for a Single Interval	97
5.1.2 The Characteristic Equation.....	100
5.1.3 The Characteristic Equation, Second Look.....	102
5.2 Characteristic Equation II: Scattering Approach	106
5.2.1 On the Scattering Matrix Associated with a	
Compact Interval	106
5.2.2 Positive Spectrum and Scattering Matrices for	
Finite Compact Graphs	110
5.3 Characteristic Equation III: M-Function Approach.....	113
5.3.1 M-Function for a Single Interval.....	113
5.3.2 The Edge M-Function	116
5.3.3 Characteristic Equation via the M-Function:	
General Vertex Conditions	117
5.3.4 Reduction of the M-Function for Standard	
Vertex Conditions.....	118
6 Standard Laplacians and Secular Polynomials	123
6.1 Secular Polynomials	123
6.2 Secular Polynomials for Small Graphs.....	129
6.3 Zero Sets for Small Graphs	135
Appendix 1: Singular Sets on Secular Manifolds, Proof	
of Lemma 6.3.....	144
7 Reducibility of Secular Polynomials	151
7.1 Contraction of Graphs.....	151
7.2 Extensions of Graphs.....	158
7.3 Secular Polynomials for the Watermelon Graph	
and Its Closest Relatives	166

7.4	Secular Polynomials for Flower Graphs and Their Extensions	171
7.5	Reducibility of Secular Polynomials for General Graphs	173
8	The Trace Formula	179
8.1	The Characteristic Equation: Multiplicity of Positive Eigenvalues	180
8.2	Algebraic and Spectral Multiplicities of the Eigenvalue Zero	183
8.3	The Trace Formula for Standard Laplacians	187
8.4	Trace Formula for Laplacians with Scaling-Invariant Vertex Conditions	206
9	Trace Formula and Inverse Problems	209
9.1	Euler Characteristic for Standard Laplacians	209
9.2	Euler Characteristic for Graphs with Dirichlet Vertices	214
9.3	Spectral Asymptotics and Schrödinger Operators	217
9.3.1	Euler Characteristic and Spectral Asymptotics	217
9.3.2	Schrödinger Operators and Euler Characteristic of Graphs.....	221
9.3.3	General Vertex Conditions: A Counterexample.....	223
9.4	Reconstruction of Graphs with Rationally Independent Lengths	224
10	Arithmetic Structure of the Spectrum and Crystalline Measures	233
10.1	Arithmetic Structure of the Spectrum	233
10.2	Crystalline Measures	239
10.3	The Lasso Graph and Crystalline Measures	244
10.4	Graph's Spectrum as a Delone Set	250
11	Quadratic Forms and Spectral Estimates.....	259
11.1	Quadratic Forms (Integrable Potentials)	259
11.1.1	Explicit Expression	260
11.1.2	An Elementary Sobolev Estimate.....	262
11.1.3	The Perturbation Term Is Form-Bounded	263
11.1.4	The Reference Laplacian	265
11.1.5	Closure of the Perturbed Quadratic Form	269
11.2	Spectral Estimates (Standard Vertex Conditions).....	271
11.3	Spectral Estimates for General Vertex Conditions.....	279
12	Spectral Gap and Dirichlet Ground State	283
12.1	Fundamental Estimates	283
12.1.1	Eulerian Path Technique.....	284
12.1.2	Symmetrisation Technique	286
12.2	Balanced and Doubly Connected Graphs	288
12.3	Graphs with Dirichlet Vertices.....	290
12.4	Cheeger's Approach.....	292

12.5	Topological Perturbations in the Case of Standard Conditions	300
12.5.1	Gluings Vertices Together	301
12.5.2	Adding an Edge	303
12.6	Bonus Section: Further Topological Perturbations	310
12.6.1	Cutting Edges	310
12.6.2	Deleting Edges	311
13	Higher Eigenvalues and Topological Perturbations	317
13.1	Fundamental Estimates for Higher Eigenvalues	317
13.1.1	Lower Estimates	317
13.1.2	Upper Bounds	321
13.1.3	Graphs Realising Extremal Eigenvalues	322
13.2	Gluings and Cutting Vertices with Standard Conditions	323
13.3	Gluings Vertices with Scaling-Invariant Conditions	324
13.3.1	Scaling-Invariant Conditions Revisited	324
13.3.2	Gluings Vertices	325
13.3.3	Spectral Gap and Gluing Vertices with Scaling-Invariant Conditions	327
13.4	Gluings Vertices with General Vertex Conditions	329
14	Ambartsumian Type Theorems	331
14.1	Two Parameters Fixed, One Parameter Varies	332
14.1.1	Zero Potential Is Exceptional: Classical Ambartsumian Theorem	333
14.1.2	Interval-Graph Is Exceptional: Geometric Version of Ambartsumian Theorem for Standard Laplacians	336
14.1.3	Standard Vertex Conditions Are Not Exceptional	339
14.2	One Parameter Is Fixed, Two Parameters Vary	341
14.2.1	Standard Vertex Conditions Are Exceptional: Schrödinger Operators on Arbitrary Graphs	341
14.2.2	Zero Potential: Laplacians on Graphs that Are Isospectral to the Interval	344
14.2.3	Single Interval: Schrödinger Operators Isospectral to the Standard Laplacian	347
15	Further Theorems Inspired by Ambartsumian	355
15.1	Ambartsumian-Type Theorem by Davies	355
15.1.1	On a Sufficient Condition for the Potential to Be Zero ...	356
15.1.2	Laplacian Heat Kernel	357
15.1.3	On Schrödinger Semigroups	368
15.1.4	A Theorem by Davies	371
15.2	On Asymptotically Isospectral Quantum Graphs	373
15.2.1	On the Zeroes of Generalised Trigonometric Polynomials	374
15.2.2	Asymptotically Isospectral Quantum Graphs	377

15.2.3	When a Schrödinger Operator Is Isospectral to a Laplacian	379
16	Magnetic Fluxes.....	381
16.1	Unitary Transformations via Multiplications and Magnetic Schrödinger Operators	381
16.2	Vertex Phases and Transition Probabilities.....	385
16.3	Topological Damping of Aharonov-Bohm Effect	390
16.3.1	Getting Started	390
16.3.2	Explicit Calculation of the Spectrum	393
16.3.3	Topological Reasons for Damping.....	395
17	M-Functions: Definitions and Examples	401
17.1	The Graph M-Function.....	401
17.1.1	Motivation and Historical Hints	401
17.1.2	The Formal Definition	402
17.1.3	Examples	405
17.2	Explicit Formulas Using Eigenfunctions	411
17.3	Hierarchy of M-Functions for Standard Vertex Conditions	423
18	M-Functions: Properties and First Applications	429
18.1	M-Function as a Matrix-Valued Herglotz-Nevanlinna Function ...	429
18.2	Gluing Procedure and the Spectral Gap	441
18.2.1	Examples	449
18.3	Gluing Graphs and M-Functions	452
18.3.1	The M-Function for General Vertex Conditions at the Contact Set	452
18.3.2	Gluing Graphs with General Vertex Conditions	453
	Appendix 1: Scattering from Compact Graphs	457
19	Boundary Control: BC-Method.....	463
19.1	Inverse Problems: First Look	463
19.2	How to Use BC-Method for Graphs.....	465
19.3	The Response Operator and the M-Function.....	466
19.4	Inverse Problem for the One-Dimensional Schrödinger Equation	469
19.5	BC-Method for the Standard Laplacian on the Star Graph	477
19.6	BC-Method for the Star Graph with General Vertex Conditions...	481
20	Inverse Problems for Trees	487
20.1	Obvious Ambiguities and Limitations	488
20.2	Subproblem I: Reconstruction of the Metric Tree	492
20.2.1	Global Reconstruction of the Metric Tree	492
20.2.2	Local Reconstruction of the Metric Tree	495
20.3	Subproblem II: Reconstruction of the Potential	497
20.4	Subproblem III: Reconstruction of the Vertex Conditions	499
20.4.1	Trimming a Bunch	499

20.4.2	Recovering the Vertex Conditions for an Equilateral Bunch.....	500
20.5	Cleaning and Pruning Using the M-functions	508
20.5.1	Cleaning the Edges	509
20.5.2	Pruning Branches and Bunches	510
20.6	Complete Solution of the Inverse Problem for Trees	511
	Appendix 1: Calculation of the M-function for the Cross Graph	513
	Appendix 2: Calderón Problem	515
21	Boundary Control for Graphs with Cycles: Dismantling Graphs	517
21.1	Inverse Problems for Graphs with Cycles: Boundary Control Versus Magnetic Boundary Control	517
21.2	Dismantling Graphs I: Independent Subtrees	520
21.2.1	General Strategy	520
21.2.2	M-functions and Their Singularities	521
21.2.3	Dismantling Graphs I: Independent Subtrees	524
22	Magnetic Boundary Control I: Graphs with Several Cycles	531
22.1	Dissolving the Vertices	531
22.2	Geometric Ideas Behind the MBC-Method: First Examples	538
22.3	Infiltration Domains, Walls and Bottlenecks	540
22.4	Solution of the Inverse Problem Via the MBC-Method	544
23	Magnetic Boundary Control II: Graphs on One Cycle and Dependent Subtrees	555
23.1	Inverse Problem for the Loop	555
23.1.1	On Edge and Loop M-functions	555
23.1.2	Reconstructing Potential on the Loop	560
23.2	Inverse Problem for the Lasso	563
23.3	Inverse Problems for Graphs with One Cycle.....	565
23.4	Dismantling Graphs II: Dependent Subtrees	571
24	Discrete Graphs	577
24.1	Laplacian Matrices: Definitions and Elementary Properties	577
24.2	Topology and Spectra: Discrete Graphs	580
24.3	Normalised Laplacians and Equilateral Metric Graphs	583
24.4	Isospectrality of Normalised and Standard Laplacians	592
24.5	Spectral Gap for Discrete Laplacians	595
	More Metric Graphs	605
	References.....	609
