1	Lie Group Analysis in Outline	1
1.1	Continuous point transformation groups	1
1.1.1	One-parameter groups	1
1.1.2	Infinitesimal transformations	2
1.1.3	Lie equations	3
1.1.4	Exponential map	4
1.1.5	Canonical variables	5
1.1.6	Invariants and invariant equations	6
1.2	Symmetries of ordinary differential equations	8
1.2.1	Frame of differential equations	8
1.2.2	Extension of group actions to derivatives	10
1.2.3	Generators of prolonged groups	10
1.2.4	Definition of a symmetry group	11
1.2.5	Main property of symmetry groups	12
1.2.6	Calculation of infinitesimal symmetries	12
1.2.7	An example	13
1.2.8	Lie algebras	15
1.3	Integration of first-order equations	16
1.3.1	Lie's integrating factor	16
1.3.2	Method of canonical variables	17
1.4	Integration of second-order equations	20
1.4.1	Canonical variables in Lie algebras L_2	20
1.4.2	Integration method	21
1.5	Symmetries of partial differential equations	24
1.5.1	Main concepts illustrated by evolution equations	24
1.5.2	Invariant solutions	29
1.5.3	Group transformations of solutions	30
1.6	Three definitions of symmetry groups	31
1.6.1	Frame and extended frame	31
1.6.2	First definition of symmetry group	33

1.6.3	Second definition	34
1.6.4	Third definition	34
1.7	Lie-Bäcklund transformation groups	36
1.7.1	Lie-Bäcklund operators	36
1.7.2	Lie-Bäcklund equations and their integration	39
1.7.3	Lie-Bäcklund symmetries	42
	References	43
2	Approximate Transformation Groups and Symmetries	45
2.1	Approximate transformation groups	45
2.1.1	Notation and definitions	45
2.1.2	Approximate Lie equations	48
2.1.3	Approximate exponential map	50
2.2	Approximate symmetries	54
2.2.1	Definition of approximate symmetries	54
2.2.2	Determining equations & Stable symmetries	55
2.2.3	Calculation of approximate symmetries	56
2.2.4	Examples of approximate symmetries	56
2.2.5	Integration using approximate symmetries	60
2.2.6	Integration using stable symmetries	61
2.2.7	Approximately invariant solutions	64
2.2.8	Approximate conservation laws (first integrals)	70
	References	72
3	Symmetries of Integro-Differential Equations	73
3.1	Definition and infinitesimal test	73
3.1.1	Definition of symmetry group	73
3.1.2	Variational derivative for functionals	74
3.1.3	Infinitesimal criterion	75
3.1.4	Prolongation on nonlocal variables	76
3.2	Calculation of symmetries illustrated by Vlasov-Maxwell equations	77
3.2.1	One-dimensional electron gas	78
3.2.2	Three-dimensional plasma kinetic equations	85
3.2.3	Plasma kinetic equations with Lagrangian velocity	88
3.2.4	Electron-ion plasma equations in quasi-neutral approximation	92
	References	94
4	Renormgroup Symmetries	95
4.1	Introduction	95
4.2	Renormgroup algorithm	99
4.2.1	Basic manifold	100
4.2.2	Admitted group	100
4.2.3	Restriction of admitted group on solutions	101
4.2.4	Renormgroup invariant solutions	102

- 4.3 Examples 102
 - 4.3.1 Modified Burgers equation 102
 - 4.3.2 Example from geometrical optics 105
 - 4.3.3 Method based on embedding equations 108
 - 4.3.4 Renormgroup and differential constraints 109
- References 111
- 5 Applications of Renormgroup Symmetries 113**
 - 5.1 Nonlinear optics 113
 - 5.1.1 Nonlinear geometrical optics 115
 - 5.1.2 Nonlinear wave optics 122
 - 5.1.3 Renormgroup algorithm using functionals 127
 - 5.2 Plasma physics 129
 - 5.2.1 Harmonics generation in inhomogeneous plasma 129
 - 5.2.2 Nonlinear dielectric permittivity of plasma 132
 - 5.2.3 Adiabatic expansion of plasma bunches 137
 - References 141
