1	Introduction - Industrial radio systems engineering	1
1.1	Industrial radio requirements	2
1.2	Softwarization for Cloud RANs	3
1.3	Objective of this thesis	5
1.4	Contributions and structure	6
1.4.1	Fundamentals	6
1.4.2	Channel coding	6
1.4.3	Symbol mapping	6
1.4.4	Multicarrier modulation	7
1.4.5	Cloud radio access network	7
1.4.6	Medium access control	7
1.4.7	Implementation	8
1.5	Notation	8
2	Industrial radio system model	9
2.1	Link model	11
2.2	Small scale channel model	13
2.2.1	Additive white Gaussian noise	14
2.2.2	Multipath Rayleigh fading channel model	14
2.3	Large scale channel model	17
2.4	Chapter summary	19
3	Low-latency channel coding for short packets	21
3.1	Codes for short packets	22
3.1.1	Code candidates	23
3.1.2	Code comparison	23
3.2	Polar codes	24
3.2.1	Encoder	27
3.2.2	Channel construction	28
3.2.3	Decoder	31

3.2.4	Puncturing	39
3.3	Integrated decoding and security	39
3.3.1	Contribution	41
3.4	Numerical software defined radio parameter evaluation	41
3.4.1	Benchmarks	41
3.4.2	SCL list size	42
3.4.3	Channel construction algorithm	46
3.4.4	CRC aided polar codes and security	48
3.4.5	Systematic versus non-systematic codes	49
3.4.6	Punctured codes	51
3.4.7	Contribution	52
3.5	Summary	52
3.5.1	Contribution	52
4	Symbol mapping	53
4.1	Fundamentals	54
4.2	Quadrature amplitude modulation	55
4.3	Soft demapping	56
4.4	Bit-interleaved coded modulation	57
4.5	Mutual information	57
4.6	Numerical software defined radio parameter evaluation	59
4.7	Summary	62
4.7.1	Contribution	63
5	Multicarrier modulation	65
5.1	Fundamentals	67
5.2	Resource grid	68
5.3	Multicarrier modulation	69
5.3.1	Orthogonal frequency division multiplexing	70
5.3.2	Non-iterative equalization strategies	70
5.3.3	Generalized frequency division multiplexing	71
5.4	Cyclic prefix	76
5.5	Channel estimation	78
5.6	Numerical software defined radio parameter evaluation	79
5.6.1	Resource mapping	79
5.6.2	Fast Fourier transform	81
5.6.3	GFDM parameter evaluation on latency	83
5.6.4	Cyclic prefix	87
5.6.5	Channel estimation	88
5.6.6	System evaluation	90
5.7	Summary	91

5.7.1	Contribution	91
6	Cloud radio access network with functional splits	93
6.1	Cloud RAN with distributed radio access points	94
6.1.1	Joint transmission	98
6.1.2	Joint reception	99
6.2	Quantization	100
6.2.1	Information bottleneck based quantization	101
6.2.2	Uniform quantization	104
6.2.3	Fixed log-likelihood ratio quantization	105
6.3	Numerical cloud RAN evaluation	105
6.3.1	Additive white Gaussian noise	106
6.3.2	Frequency-selective Rayleigh fading	107
6.3.3	Multiple distributed radio access points	110
6.4	Summary	112
6.4.1	Contribution	113
7	Medium access control	115
7.1	System view	117
7.1.1	Resources	117
7.1.2	System flowgraph	119
7.1.3	Packet arrival model	120
7.2	Link abstraction	121
7.2.1	Effective SNR mapping	122
7.2.2	Adjustment factor calibration	123
7.3	Link abstraction evaluation	125
7.3.1	Link abstraction contribution	129
7.4	Scheduling	130
7.5	Resource allocation	133
7.6	System level simulations	136
7.6.1	Assumptions	136
7.6.2	Simulation results	137
7.7	Summary	145
7.7.1	Contribution	145
8	Testbed implementation	147
8.1	Testbed concept	148
8.2	Testbed configuration	149
8.3	Software modem system design	152
8.3.1	Streaming and simulation software architecture	152
8.3.2	Test driven development	154
8.3.3	Object oriented programming	154

8.4	Software environment	155
8.4.1	Linux host	155
8.4.2	GNU Radio	155
8.4.3	USRP hardware driver	157
8.4.4	Software benchmarking tools	157
8.5	Implemented software components	158
8.5.1	Testbed software integration	159
8.5.2	Synchronization	163
8.5.3	GFDM implementation	164
8.5.4	Symbol mapping	165
8.5.5	Polar codes	166
8.5.6	Latency measurements	166
8.6	Hardware components	168
8.7	Testbed	170
8.7.1	Latency	171
8.7.2	Throughput	175
8.7.3	Testbed measurements at Bosch Hildesheim	176
8.7.4	Testbed measurements at NEOS	181
8.8	Summary	184
8.8.1	Contribution	185
9	Summary	187
9.1	Contributions	187
9.2	Open research questions and future work	189
A	Specialized node implementation in C++	191
B	Mutual information derivations	193
B.1	Entropy	193
B.2	Channel capacity	193
B.3	Mutual information for BICM	194
C	Log-likelihood ratio calculation	197
C.1	LLR definition	197
C.2	Likelihood	198
C.3	Calculation	198
C.4	Specialized calculations	199
	Acronyms	205
	Bibliography	213
