1	Introduction	1
2	Tower Overlay over LTE-A+ and the 3GPP FeMBMS Standards	3
2.1	Tower Overlay over LTE-A+	4
2.2	3GPP FeMBMS and LTE-based “5G Broadcast”	7
2.2.1	System Architecture	8
2.2.2	Spectrum, Frame Structure, and Numerologies	10
2.2.3	Synchronization Signals	12
2.2.4	Signaling Information	13
2.2.5	Multicast Channels	14
2.2.6	Reference Signals	15
2.3	Implementation	17
2.3.1	FeMBMS Modulator	18
2.3.2	FeMBMS Demodulator	18
2.4	FeMBMS Performance Evaluation	21
2.4.1	Network Load	21
2.4.2	Coverage Evaluation	22
2.4.3	Field Trial	25
2.5	Beyond FeMBMS	27
3	5G New Radio	29
3.1	System Architecture	30
3.2	Spectrum, Frame Structure, and Numerologies	33
3.3	Synchronization Signals	35
3.4	Signaling Information	37
3.4.1	Master Information Block and Physical Broadcast Channel	37
3.4.2	Downlink Control Information, Control-Resource Set, and Physical Downlink Control Channel	39
3.4.3	Channel Coding with Polar Codes	43
3.5	System Information and Unicast Data Transmission	45
3.5.1	System Information Blocks	45
3.5.2	Physical Downlink Shared Channel Resource Allocation	46
3.5.3	Channel Coding with LDPC Codes	47
3.6	Data Link Layer	56
3.6.1	Service Data Adaption Protocol and Packet Data Convergence Protocol	57
3.6.2	Radio Link Control	57
3.6.3	Medium Access Control	58

3.7	5G Multicast and Broadcast Services	59
3.7.1	System Architecture	59
3.7.2	Protocols and Physical Layer	61
3.7.3	Outlook	63
3.8	Requirements for a 5G New Radio Terrestrial Broadcast System	64
3.8.1	System Architecture	64
3.8.2	Performance of Broadcast Services	64
3.8.3	Synchronization and Signaling	65
4	A 5G New Radio Terrestrial Broadcast (NRBC) System	67
4.1	System Overview	67
4.2	System Architecture	68
4.3	Spectrum and Numerologies	70
4.4	Synchronization Signals	73
4.5	Signaling and System Information	75
4.5.1	Definition of a Master Information Block-NRBC	75
4.5.2	Downlink Control Information, Control-Resource Set 0 Mapping, and Physical Downlink Control Channel	76
4.5.3	Definition of System Information Block 1-NRBC, System Information Block x-NRBC, and Physical Downlink Shared Channel Mapping	77
4.5.4	Definition of a Broadcast-RNTI	80
4.6	Definition of a Physical Multicast Channel	81
4.6.1	Service Announcement and Resource Allocation	82
4.6.2	Channel Coding with extended LDPC Codes	83
4.6.3	Adjustable Demodulation Reference Signal Mapping	89
4.6.4	Broadcast-Broadband Convergence via HARQ	91
4.6.5	Time-Interleaving	97
4.7	Data Link Layer Additions	98
4.8	Implementation	100
4.8.1	5G NRBC Modulator	100
4.8.2	5G NRBC Demodulator	101
5	Evaluation of the 5G New Radio Terrestrial Broadcast System via Simulation	107
5.1	Simulation Environment	107
5.2	Performance of the Synchronization	109
5.2.1	Performance relative to FeMBMS	109
5.2.2	Performance Comparison of Numerologies	111
5.2.3	Summary of Results	113
5.3	Performance of Signaling and System Information	113
5.3.1	Performance during initial Decoding and continuous Reception	114
5.3.2	Performance Enhancement by the Broadcast-RNTI	116
5.3.3	Performance relative to FeMBMS	117
5.3.4	Summary of Results	119

5.4 Performance of the Physical Multicast Channel 120

5.4.1 Performance Enhancement of the LDPC Extension 120

5.4.2 Performance of the LDPC Extension relative to ATSC 3.0 121

5.4.3 Performance of the LDPC Extension in a typical Use Case 124

5.4.4 Impact of the Demodulation Reference Signal Mapping 126

5.4.5 Performance Enhancement by Time-Interleaving 133

5.4.6 Summary of Results 136

5.5 Throughput and Efficiency 137

**6 Evaluation of the 5G New Radio Terrestrial Broadcast System
in a Field Trial 141**

6.1 Setup and Configuration 141

6.2 Coverage Evaluation 143

6.3 Overview of Measurements 145

6.4 Performance of the Synchronization 148

6.5 Performance of Signaling Channels 150

6.6 Performance of the Physical Multicast Channel 151

6.6.1 Performance Comparison of Numerologies 152

6.6.2 Influence of the Multipath Richness and Receiver Velocity 158

6.7 Summary of Results 159

7 Summary and Conclusion 161

Appendix A Downlink Control Information Formats for the Downlink 164

Appendix B Physical Downlink Shared Channel Time Domain Resources 166

Appendix C System Information Block 1 166

Appendix D Characterization of the Transmission Channel 168

D.1 Additive White Gaussian Noise Channel 168

D.2 Multipath Transmission Channels 168

Appendix E Performance of the FeMBMS Rel-16 Synchronization 174

Appendix F Nyquist Limits for Demodulation Reference Signal Mappings 174

Appendix G Map of Braunschweig 176

Abbreviations 177
