

Table of Contents

Invited Talks (received in text form)

W. Klösgen

*Deviation and association patterns for subgroup mining
in temporal, spatial, and textual data bases*..... 1

S. Marcus

*The paradox of the heap of grains in respect to
roughness, fuzziness, and negligibility*.....19

V. W. Marek, M. Truszczyński

Rough sets - what are they about? 24

Z. Pawlak

Reasoning about data - a rough set perspective.....25

L.A. Zadeh

*Information granulation and its centrality
in human and machine intelligence*.....35

Communications

Session RSM1 Rough Set Methods

J. W. Grzymala-Busse, X. Zou

Classification strategies using certain and possible rules.....37

J. Miro-Julia, J. Miró

Well-behaved operations for approximate sets 45

D. Ślęzak

Searching for frequential reducts in decision tables with uncertain objects52

S. Greco, B. Matarazzo, R. Słowiński

A new rough set approach to multicriteria and multiattribute classification....60

Session ST1 Statistical Inference

J. Ćwik, J. Koronacki

A heuristic method of model choice for nonlinear regression.....68

A. Ciok, T. Kowalczyk, E. Pleszczyńska <i>How a new statistical infrastructure induced a new computing trend in data analysis</i>	75
--	----

Session GS1 Grammar Systems and Molecular Computations

J. Dassow <i>Some remarks on networks of parallel language processors</i>	83
J. Castellanos, S. Leiva, J. Rodrigo, A. Rodríguez-Patón <i>Molecular computation for genetic algorithms</i>	91
R. Ceterchi <i>Marcus contextual languages and their cut-and-paste properties</i>	99
R. Gramatovici <i>Contextual multilanguages: a learning method</i>	107
A. Knyazev <i>On recognition of words from languages generated by linear grammars with one nonterminal symbol</i>	111

Session LRS1 Logic in Rough Sets

W. Buszkowski <i>Approximation spaces and definability for incomplete information systems</i>	115
P. Pagliani <i>Intrinsic co-Heyting boundaries and information incompleteness in rough set analysis</i>	123
P. Maritz <i>Multifunctions as approximation operations in generalized approximation spaces</i>	131
J. Järvinen <i>Preimage relations and their matrices</i>	139

Session IC1 Intelligent Control

B. Siemiątkowska, A. Dubrawski <i>Cellular neural networks for navigation of a mobile robot</i>	147
X. Keming, T. Y. Lin, Z. Jianwei <i>The Takagi-Sugeno fuzzy model identification method of parameter varying systems</i>	155

K. Eguchi, S. Yamane, H. Sugi, K. Oshima <i>Sensing of arc length and wire extension using neural network in robotic welding</i>	163
---	-----

S. Yamane, K. Okada, K. Shinoda, K. Oshima <i>Traffic signal control using multi-layered fuzzy control</i>	171
---	-----

Session RSKDD1 Rough Sets in KDD

W. Ziarko <i>Approximation region-based decision tables</i>	178
--	-----

M. C. Fernández-Baizán, E. Menasalvas Ruiz, A. Wasilewska <i>A model of RSDM implementation</i>	186
--	-----

Z. W. Raś <i>Handling queries in incomplete CKBS through knowledge discovery</i>	194
---	-----

E. Martienne, M. Quafafou <i>Learning logical descriptions for document understanding: a rough sets-based approach</i>	202
---	-----

M. C. Fernández-Baizán, E. Menasalvas Ruiz, J. M. Peña Sánchez, B. Pardo Pastrana <i>Integrating KDD algorithms and RDBMS code</i>	210
--	-----

Session DM1 Data Mining

M. Kryszkiewicz <i>Fast discovery of representative association rules</i>	214
--	-----

A. Lenarcik, Z. Piasta <i>Rough classifiers sensitive to costs varying from object to object</i>	222
---	-----

N. Zhong, J. Dong, S. Ohsuga <i>Soft techniques to data mining</i>	231
---	-----

J. M. Żytkow, A. P. Sanjeev <i>Business process understanding: mining many datasets</i>	239
--	-----

Session EV1 Evolutionary Computations

A. Kanasugi, T. Shimayama, N. Nakaya, T. Iizuka <i>A genetic algorithm for switchbox routing problem</i>	247
---	-----

H.-M. Voigt, J. M. Lange <i>On the benefits of random memorizing in local evolutionary search</i>	255
--	-----

K. Eguchi, J. Suzuki, S. Yamane, K. Oshima <i>An application of genetic algorithms to floorplanning of VLSI</i>	263
--	-----

U. Boryczka	
<i>Learning with delayed rewards in ant systems for the job-shop scheduling problem.....</i>	<i>271</i>

Session GA1 General Approximations

G. Cattaneo	
<i>Fuzzy extension of rough sets theory.....</i>	<i>275</i>
S. Greco, B. Matarazzo, R. Słowiński	
<i>Fuzzy similarity relation as a basis for rough approximations.....</i>	<i>283</i>
J. Stepaniuk	
<i>Approximation spaces in extensions of rough set theory.....</i>	<i>290</i>
Y. Y. Yao	
<i>On generalizing Pawlak approximation operators.....</i>	<i>298</i>

Session IP1 Image Processing

J. M. Lange, H.-M. Voigt, S. Burkhardt, R. Göbel	
<i>Real-time real-world visual classification - making computational intelligence fly.....</i>	<i>308</i>
W. Skarbek	
<i>Fractal operator convergence by analysis of influence graph.....</i>	<i>316</i>
K. Ignasiak, W. Skarbek	
<i>Pattern recognition by invariant reference points.....</i>	<i>322</i>
J. M. del Rosario, C. Jędrzejek	
<i>An analysis of context selection in embedded wavelet coders.....</i>	<i>330</i>

Session AR1 Approximate Reasoning

S. K. M. Wong, C. J. Butz	
<i>Equivalent characterization of a class of conditional probabilistic independencies.....</i>	<i>338</i>
M. A. Kłopotek, S. T. Wierzchoń	
<i>A new qualitative rough-set approach to modeling belief functions.....</i>	<i>346</i>

Session IP2 Image Processing

R. Sikora, W. Skarbek	
<i>On stability of Oja algorithm.....</i>	<i>354</i>

R. J. Rak	
<i>Transform vector quantization of images in one dimension</i>	361
W. Rakowski, Z. Bartosiewicz	
<i>Daubechies filters for 2D wavelet transforms</i>	369
 Session RSM2 Rough Set Methods	
T.-K. Jenssen, J. Komorowski, A. Øhrn	
<i>Some heuristics for default knowledge discovery</i>	373
T. Y. Lin	
<i>Fuzzy partitions II: belief functions. A probabilistic view</i>	381
T. Y. Lin, N. Zhong, J. J. Dong, S. Ohsuga	
<i>Frameworks for mining binary relations in data</i>	387
J. Stefanowski	
<i>Handling continuous attributes in discovery of strong decision rules</i>	394
J. Wróblewski	
<i>Covering with reducts - a fast algorithm for rule generation</i>	402
 Session LFSC1 Logical Foundations of Soft Computing	
W. Bartol, X. Caicedo, F. Rosselló	
<i>Syntactical content of finite approximations of partial algebras</i>	408
D. Pacholczyk	
<i>A new approach to linguistic negation based upon compatibility level and tolerance threshold</i>	416
H. Sakai	
<i>Some issues on nondeterministic knowledge bases with incomplete and selective information</i>	424
Q. Liu	
<i>The OI-resolution of operator rough logic</i>	432
 Session HRS1 Hybrid Methods in Rough Sets	
K. Krawiec, R. Słowiński, I. Szczesniak	
<i>Pedagogical method for extraction of symbolic knowledge from neural networks</i>	436
P. Wojdyło	
<i>Wavelets, rough sets and artificial neural networks in EEG analysis</i>	444
R. Susmaga	
<i>Parallel computation of reducts</i>	450

A. Mrózek, K. Skabek	
<i>Rough rules in Prolog</i>	458

Session RSMA1 Rough Set Methods and Applications

A. Czyżewski, B. Kostek	
<i>Tuning the perceptual noise reduction algorithm using rough sets</i>	467
S. Tsumoto	
<i>Modelling medical diagnostic rules based on rough sets</i>	475
A. Wakulicz-Deja, M. Boryczka, P. Paszek	
<i>Discretization of continuous attributes on decision system in mitochondrial encephalomyopathies</i>	483
J. F. Peters, K. Ziaei, S. Ramanna	
<i>Approximate time rough control: concepts and application to satellite attitude control</i>	491

Session C1 Complexity

M. Moshkov	
<i>Some relationships between decision trees and decision rule systems</i>	499
I. Chikalov	
<i>On decision trees with minimal average depth</i>	506
A. Moshkova	
<i>On diagnosis of retaining faults in circuits</i>	513
V. Shevtchenko	
<i>On the depth of decision trees for diagnosing of nonelementary faults in circuits</i>	517

Session RSMA2 Rough Set Methods and Applications

J. G. Bazan	
<i>Discovery of decision rules by matching new objects against data tables</i>	521
Y. Zhou, J. Wang	
<i>Rule+exception modeling based on rough set theory</i>	529
B. S. Chlebus, S. H. Nguyen	
<i>On finding optimal discretizations for two attributes</i>	537
H. S. Nguyen	
<i>Discretization problems for rough set methods</i>	545

J. Johnson	
<i>Rough mereology for industrial design</i>	553

Session GH1 General Hybrid Methods

M. Flasiński, R. Schaefer, W. Toporkiewicz	
<i>Optimal stochastic scaling of CAE parallel computations</i>	557
J. Wierzbicki	
<i>CBR for complex objects represented in hierarchical information systems</i>	565
M. Rawski, L. Jóźwiak, A. Chojnacki	
<i>Application of the information measures to input support selection in functional decomposition</i>	573
T. R. Burns, A. Gomolińska	
<i>Modelling social game systems by rule complexes</i>	581
L. Jóźwiak	
<i>Analysis and synthesis of information systems with information relationships and measures</i>	585
W. Traczyk	
<i>Approximations in data mining</i>	589

Session AP1 Applications of Rough Sets

D. Van den Poel, Z. Piasta	
<i>Purchase prediction in database marketing with the ProbRough system</i>	593
W. Czajewski	
<i>Rough sets in optical character recognition</i>	601
B. Prędkie, R. Słowiński, J. Stefanowski, R. Susmaga, S. Wilk	
<i>ROSE - software implementation of the rough set theory</i>	605
R. W. Świniarski	
<i>Rough sets and bayesian methods applied to cancer detection</i>	609
R. W. Świniarski	
<i>Rough sets and neural networks application to handwritten character recognition by complex Zernike moments</i>	617
