

Contents

1. Introduction. General Problems of Description of Atomic Spectra in Plasmas	1
1.1 Atomic Physics and Plasma Physics. Quasiclassical Methods for Atomic Processes	1
1.2 General Problems of Atomic-State Mixing in a Plasma Medium. Density Matrix Method	2
2. Classical Motion in an Atomic Potential. Atomic Structure	8
2.1 Classical Radiation Spectra in a Coulomb Field. Peculiarities of the High-Frequency Domain. Kramers' Electrodynamics ..	8
2.2 Symmetry Properties of the Coulomb Field	13
2.3 Nonhydrogenic Atoms. Allowed and Forbidden Transitions. Properties of Multicharged Ion Spectra	16
2.3.1 Nonhydrogenic Atomic Spectra Structure. Allowed and Forbidden Transitions	16
2.3.2 Properties of Multicharged Ions (MCI) Spectra	18
2.4 Auto-ionization States. Stationary (Fano) and Time-Dependent (Kompaneets) Descriptions	22
2.4.1 Auto-ionization States	22
2.4.2 The Interaction of Discrete States with a Continuum. Fano and Kompaneets Descriptions	23
2.5 Rydberg Atomic States in Plasmas	26
3. Radiation Transition Probabilities and Radiation Kinetics in Kramers' Electrodynamics	27
3.1 Quasiclassical Transition Probabilities	27
3.2 Line Radiation (LR) Probabilities	28
3.3 Photorecombination (PR) Cross Section	32
3.4 Kramers' Electrodynamics and Radiative Cascades Between Rydberg Atomic States	38
3.4.1 Classical Kinetic Equation	40
3.4.2 Quantum Kinetic Equation in the Quasiclassical Approximation	41
3.4.3 Relationship of the Quasiclassical Solution to the Quantum Cascade Matrix. The Solution in the General Quantum Case	45
3.4.4 Atomic-Level Populations for a Photorecombinative Source. Quasiclassical Scaling Laws	48

4. Fermi Method of Equivalent Photons and the Probabilities of Radiative-Collisional Transitions in Atoms	54
4.1 Applicability of the Fermi Method	54
4.2 Excitation by Electron Impact as Absorption of Equivalent Photons by an Ion	56
4.3 Dielectronic Recombination as the Resonance Fluorescence of Equivalent Photons	59
4.4 Polarization Radiation as Non-Resonant Scattering of Equivalent Photons	63
5. Hydrogenic Atom in an Electric Field.	
Quasiclassical Consideration	69
5.1 Quasiclassical Results for the Transition Probabilities and Lifetimes in Parabolic Coordinates	69
5.1.1 Introductory Comments	69
5.1.2 General Relationships	71
5.1.3 Radiative Lifetimes of States	74
5.2 Intensities of the Stark Components	77
5.3 Weak Fields. Asymptotic Theory of the Decay of an Atom	81
5.4 Classical Theory of the Decay of an Atom in an Electric Field	82
5.5 Decay of States Near the Critical Value of an Electric Field	84
5.6 General Theory of Atomic States in an Electric Field	86
5.6.1 Basis of the Semiclassical Approach	86
5.6.2 Energy Levels	87
5.6.3 Decay Rates	88
5.7 Results of Numerical Calculations	89
6. Atom in a Magnetic Field and Crossed F-B Fields	93
6.1 Introductory Remarks.	
Energy Spectrum of Low Lying Atomic States	93
6.1.1 Energy Spectrum of Lower States	94
6.2 Adiabatic Theory for Highly Excited Atomic States in a Strong Magnetic Field	98
6.3 "Latent" Symmetry of an Atom in a Magnetic Field	101
6.4 Oscillator Strengths of Atomic Transitions in Strong Magnetic Fields	108
6.5 Classical Trajectories of an Atomic Electron in a Magnetic Field. Stochastization Effects	113
6.5.1 Calculation of Classical Trajectories	113
6.5.2 Stochastization of Electron Motion in Coulomb and Magnetic Fields	117
6.5.3 Numerical Calculations of Spectra of an Atom in a Magnetic Field	119

6.6	Hydrogen Atom in Crossed Electric and Magnetic Fields	120
6.6.1	First-Order Theory	120
6.6.2	Second-Order Corrections	123
6.6.3	Atom in Electric and Strong Magnetic Fields	125
6.7	Conclusions	127
7.	Atom in a Nonresonant Oscillating Electric Field	128
7.1	The Types of Oscillating Fields in Plasmas. Quasi-energetic Level Structure	128
7.2	The Blokhintsev Spectrum	129
7.3	Hydrogen Atom in a Rotating Electric Field	132
7.4	Multiphoton Transitions in a Two-Level System	134
7.5	The Quasi-energy Spectrum of a Two-Level System. Intensities of Satellites	137
7.6	Highly Excited Atom in a Low Frequency, Nonresonant Electric Field. Quasiclassical Solution	143
8.	Atom in a Resonant Oscillating Electric Field. Simultaneous Influence of Constant and Oscillating Fields	151
8.1	Features of Resonance Conditions in Plasmas	151
8.2	Action of Weak Oscillating Electric Fields of Broad Spectral Composition on the Atom	152
8.3	Hydrogen Atom in Static (<i>S</i>) and Strong Oscillating (Dynamic- <i>D</i>) Fields. Numerical Solutions for the Case when $S \perp D$	157
8.4	Analytical Theory of Multiquantum Resonances in <i>S-D</i> Fields	161
8.5	Hydrogen Spectral Line Structure Near Resonances in <i>S-D</i> Fields	169
8.6	On the Stochastization of Highly Excited Electron Motion in a Periodic Field	174
9.	Decay of Atomic States	176
9.1	Resonance of Discrete States Against the Background of a Continuous Spectrum	176
9.1.1	A Number of Discrete States Against the Background of One Continuum	176
9.1.2	Several Continua. Scattering Problems	178
9.1.3	Two-Level Problem with a Stationary Perturbation . . .	180
9.1.4	Certain Examples	182
9.2	Damping of Atomic States Due to Their Relaxation in Plasmas	187
9.2.1	Impact Relaxation of Atomic Levels	187
9.2.2	Features of the Spectral Line Shape Under Impact Relaxation of Atomic Sublevels in an Ion Field	190

9.3	Emission of Forbidden Spectral Lines and the Decay of Metastable Levels in Plasmas	193
9.3.1	The Polarization Mechanism for Forbidden Transitions in an Atom	193
9.3.2	Interrelation Between the Nonelastic and Polarization Mechanisms. The Weisskopf Mechanism for Inelastic Transitions ...	195
9.3.3	The Adiabatic Approximation for Polarization Radiation	199
9.4	Decay of Atomic States and Some Elementary Processes in Plasmas	201
9.4.1	Transition Discrete Spectrum – Continuum in Hydrogenic Plasmas	201
9.4.2	Charge Exchange of Atoms at Multicharged Ions as a Decay Process	202
9.4.3	Auto-ionization Decays and Dielectronic Recombination in Plasmas	203
10.	Excited Hydrogen-Like Atom in Electrical Fields of Charged Particles	205
10.1	The Atomic State Evolution in the Electric Field of a Classically Moving Charged Particle	205
10.2	Effect of the Hydrogenic State Mixing During Charge Exchange of an Atom at the Multicharged Ion	209
10.3	Quantum Motion of an Electron in an Electric Field of Hydrogen-Like Atom or Ion. Connection with the Line-Broadening Problem	213
10.3.1	Classical and Quantum Formulations of the Problem of Electron Interaction with an Excited Atom	213
10.3.2	The System of Wave Functions of an Excited Hydrogen Atom and a Broadening Particle	213
10.3.3	The Hydrogen Line Shape and the Overlap Integral of the Wave Functions of a Broadening Particle	216
10.3.4	Generalization onto the Case of Hydrogen-Like Ions ..	219
10.4	Differential Cross Sections for Electron and Ion Scattering at the Excited Hydrogen Atom. Precise Solutions	222
11.	Collisions of an Atom with Atomic Particles in External Fields ..	226
11.1	Collisional Transitions Between Fine Structure Sublevels of a Hydrogen Atom in a Magnetic Field	226
11.2	Collisions of a Two-Level Atom with Particles in a Strong Resonant Electromagnetic Field	228
11.2.1	Optical Collisions. The Basic System of Equations ...	230
11.2.2	Optical Collisions and Characteristics of Light Absorption in Media	234

11.3	Landau-Zener Mechanism of Strong Electromagnetic (E. M.) Radiation Absorption in the Wings of a Spectral Line	235
11.3.1	Landau-Zener Model for Optical Phenomena	235
11.3.2	Nonlinear Effects in Absorption for the Collision of Identical Atoms	237
11.3.3	Experimental Aspects	243
11.4	Multiparticle Effects. The Change of the Atom's Quantization Direction in a Laser Field	244
11.4.1	Multiparticle Approach to the Powerful Radiation Absorption by the Atom in a Plasma	244
11.4.2	Calculation of Spectra in a Laser Field	245
11.4.3	The Change of the Atom Quantization Direction in a Laser Field	250
11.5	Radiative Collisions	253
11.6	Effect of the Electric Microfield on Resonant Charge Exchange in a Dense Medium	256
12.	The Influence of Regular and Stochastic Accelerations on Atomic Spectra	261
12.1	Regular Acceleration. Adiabatic Population Inversion in a Strong Laser Field	261
12.1.1	Landau-Zener Nonlinearities in the Spectra of a Two-Level System Subjected to Acceleration	261
12.1.2	Adiabatic Inversion of the Populations of Atomic Levels	263
12.2	Model of Brownian Motion and Optical Phenomena. Path Integral Method	264
12.2.1	The State Amplitude Method and the Path Integration	264
12.3	Investigation of Nonlinear Effects in Absorption Due to Brownian Fluctuations of Atomic Velocity	269
12.4	An Electron in a Planck Radiation Field. "Infrared Catastrophe"	272
12.4.1	Classical Current Approximation	272
12.4.2	Multiphoton-Induced Processes in a Planck Radiation Field	274
12.4.3	Calculation of the Absorbed Energy	279
