

Contents

Preface	ix
Introduction	xi
Chapter 1	Theoretical Background 1
Chapter 2	Theoretical Calculations on Small Amino Acids 15
Chapter 3	Gamma-Aminobutyric Acid (GABA) 27
Chapter 4	The Diaminobutyric (DABA), Delta Aminopentanoic, and Epsilon Aminohexanoic Acids 41
Chapter 5	Ab Initio Studies of Some Acids and Basic Amino Acids: Aspartic, Glutamic, Arginine, and Deaminoarginine 52
Chapter 6	Proline 63
Chapter 7	Taurine and Hypotaurine 74
Chapter 8	Ab Initio Calculations Related to Glucagon 83
Chapter 9	The Alpha Factor 97
Chapter 10	Tight Turns in Proteins 113
Chapter 11	Some Small Peptides 124
Chapter 12	Oligopeptides That Are Anticancer Drugs 138
Appendix	Theoretical Studies of a Glucagon Fragment: Ser8-Asp9-Tyr10 150
	ANNE-MARIE SAPSE, MIHALY MEZEI, DULI C. JAIN, and CECILLE UNSON
Index	165
