

Table of Contents

Computational Models for Cell Processes

Process Algebra Modelling Styles for Biomolecular Processes	1
<i>Muffy Calder and Jane Hillston</i>	
Simple, Enhanced and Mutual Mobile Membranes	26
<i>Bogdan Aman and Gabriel Ciobanu</i>	
Bio-PEPA with Events	45
<i>Federica Ciocchetta</i>	
<i>In Silico</i> Modelling and Analysis of Ribosome Kinetics and aa-tRNA Competition	69
<i>D. Bošnački, T.E. Pronk, and E.P. de Vink</i>	
Qualitative and Quantitative Analysis of a Bio-PEPA Model of the Gp130/JAK/STAT Signalling Pathway	90
<i>Maria Luisa Guerriero</i>	
Rule-Based Modelling and Model Perturbation	116
<i>Vincent Danos, Jérôme Feret, Walter Fontana, Russ Harmer, and Jean Krivine</i>	
Extended Stochastic Petri Nets for Model-Based Design of Wetlab Experiments	138
<i>Monika Heiner, Sebastian Lehrack, David Gilbert, and Wolfgang Marwan</i>	
A Projective Brane Calculus with Activate, Bud and Mate as Primitive Actions	164
<i>Maria Pamela C. David, Johnrob Y. Bantang, and Eduardo R. Mendoza</i>	
Accepting Networks of Non-inserting Evolutionary Processors	187
<i>Jürgen Dassow and Victor Mitrana</i>	
Discrete Modeling of Biochemical Signaling with Memory Enhancement	200
<i>John Jack and Andrei Păun</i>	
Dynamical Systems and Stochastic Programming: To Ordinary Differential Equations and Back	216
<i>Luca Bortolussi and Alberto Policriti</i>	

Computing Equilibrium Points of Genetic Regulatory Networks	268
<i>Graziano Chesi</i>	
Code, Context, and Epigenetic Catalysis in Gene Expression	283
<i>Rodrick Wallace and Deborah Wallace</i>	
Author Index	335
