Preface	v
1 Introduction	1
1.1 Finite element method (FEM)	1
1.1.1 The elliptic model problem	1
1.1.2 Conforming discretizations	4
1.1.3 Nonconforming discretizations	5
1.1.4 Structure and properties of the stiffness matrix	8
1.2 Ill-conditioned problems	10
1.2.1 Anisotropic problems	10
1.2.2 Problems with highly varying coefficients	10
1.2.3 Elastic deformation of almost incompressible materials	11
1.2.4 High-Reynolds-number flow	12
1.3 Preliminaries on iterative methods	13
1.3.1 Stationary methods	13
1.3.2 Polynomial acceleration	15
1.4 Conjugate gradients (CG)	18
1.4.1 From steepest descent to conjugate gradients	18
1.4.2 Convergence analysis of the CG method	20
1.4.3 Preconditioned conjugate gradient (PCG) method	24
1.4.4 Generalized conjugate gradient (GCG) method	26
2 Algebraic multilevel iteration methods	29
2.1 Block-factorization: Schur complement	29
2.2 Local estimates of the CBS constant	31
2.3 Two-level preconditioning methods	34
2.3.1 Algebraic two-level methods	34
2.3.2 Two-level preconditioners for FEM systems	37
2.4 Linear AMLI methods	38
2.5 Nonlinear AMLI methods	43
2.6 Optimality conditions	48
2.7 Robustness of the AMLI methods	51
2.7.1 Local analysis of the model problem	51
2.7.2 Robust preconditioning strategy	53
2.7.3 Hierarchical error estimators	54

3	Robust AMLI algorithms: Conforming linear finite elements	57
3.1	Some basic relations	57
3.2	Uniform estimates of the constant in the strengthened CBS inequality	62
3.3	Additive preconditioning of the pivot block	66
3.4	Multiplicative preconditioning of the pivot block	69
3.5	Locally improved estimates of the AMLI parameters	72
3.6	Optimal complexity solution algorithms for systems with C_{11}	73
3.6.1	A model problem	73
3.6.2	Additive algorithm	74
3.6.3	Multiplicative algorithm	74
4	Robust AMLI algorithms: Nonconforming linear finite elements	77
4.1	Crouzeix–Raviart finite elements	77
4.2	Two-level splittings: “First Reduce” and “Differences and Aggregates”	79
4.3	Uniform estimates of the CBS constant in case of non-nested spaces	81
4.4	Preconditioning of the pivot block	95
4.5	Numerical results	98
4.5.1	Concluding remarks	100
5	Schur complement based multilevel preconditioners	102
5.1	Hierarchical versus standard nodal-basis	102
5.2	A general two-level preconditioner	102
5.3	Incomplete factorization based on exact local factorization	107
5.4	Local Schur complements	112
5.5	Numerical results	114
6	Algebraic multigrid (AMG)	117
6.1	Two-grid and multigrid algorithms	118
6.1.1	Exact two-level method	118
6.1.2	From two-grid to multigrid	119
6.2	Main components of algebraic multigrid	120
6.2.1	Coarse-grid correction	120
6.2.2	Smoothing	121
6.2.3	Interpolation	123
6.3	A simple convergence result	125
6.4	Error propagation of AMG and AMLI methods	127
6.5	Classical AMG	131
6.5.1	Strong connections	131
6.5.2	Coarse-grid selection	131
6.5.3	Interpolation	132

6.6	Smoothed aggregation and adaptive AMG methods	132
6.7	Utilizing AMG components in AMLI	134
7	Preconditioning of Rannacher–Turek nonconforming FE systems	136
7.1	Rannacher–Turek nonconforming FE systems	136
7.1.1	The nonconforming FE problem	136
7.1.2	Rotated bilinear elements	137
7.1.3	Rotated trilinear elements	138
7.2	Hierarchical two-level splittings: 2D case	140
7.2.1	First reduce two-level splitting	140
7.2.2	Two-level splitting by differences and aggregates	143
7.2.3	Uniform estimates of the CBS constant for the 2D splittings	144
7.3	Hierarchical two-level splittings: 3D case	147
7.3.1	First reduce two-level splitting	147
7.3.2	Two-level splitting by differences and aggregates	150
7.3.3	Uniform estimates of the CBS constant for the 3D splittings	152
7.4	Multilevel preconditioning	155
7.5	Numerical tests	158
7.5.1	Additive and multiplicative AMLI preconditioners in 2D	158
7.5.2	Problems with jumping coefficients in 3D	159
8	AMLI algorithms for discontinuous Galerkin FE problems	164
8.1	Introduction to discontinuous Galerkin FEM	164
8.2	Element-based approach: bilinear DG systems	166
8.3	Face-based approach: Rotated bilinear DG systems	177
8.4	Two-level method and AMLI preconditioning of graph-Laplacians	186
9	AMLI methods for coupled problems	196
9.1	AMLI preconditioning of linear elasticity problems	196
9.1.1	Lamé system of elasticity	196
9.1.2	On the robustness of AMLI for conforming FE elasticity systems	198
9.1.3	Locking-free AMLI methods for Crouzeix–Raviart FE discretization of the pure displacement elasticity problem	205
9.2	Optimal order AMLI preconditioning of the Navier–Stokes problem	211
9.2.1	Crouzeix–Raviart FE discretization of the velocity field	211
9.2.2	AMLI preconditioning of the mixed FE system: weighted graph-Laplacian	213

10 Practical issues	219
10.1 Linear AMLI algorithm	219
10.2 Nonlinear AMLI algorithm	223
10.3 Case study: Integrating of new AMLI solvers	225
10.3.1 Crouzeix–Raviart FE discretization of 3D pure displacement elasticity problems	226
10.3.2 Composite FR algorithm	228
10.3.3 Numerical tests: Towards μ FEM analysis of bone structures	232
Bibliography	237
Index	245
