

Contents

1. Introduction	1
1.1 Optical Amplification	1
1.2 Interaction of Radiation with Matter	2
1.2.1 Blackbody Radiation	2
1.2.2 Boltzmann's Statistics	3
1.2.3 Einstein's Coefficients	4
1.2.4 Phase Coherence of Stimulated Emission	7
1.3 Absorption and Optical Gain	8
1.3.1 Atomic Lineshapes	8
1.3.2 Absorption by Stimulated Transitions	13
1.3.3 Population Inversion	16
1.4 Creation of a Population Inversion	17
1.4.1 The Three-Level System	18
1.4.2 The Four-Level System	20
1.4.3 The Metastable Level	21
1.5 Laser Rate Equations	22
 2. Properties of Solid-State Laser Materials	 28
2.1 Overview	28
2.1.1 Host Materials	29
2.1.2 Active Ions	34
2.2 Ruby	40
2.3 Nd:Lasers	46
2.3.1 Nd:YAG	47
2.3.2 Nd:Glass	52
2.3.3 Nd:Cr:GSGG	57
2.3.4 Nd:YLF	60
2.3.5 Nd:YVO ₄	63
2.4 Er:Lasers	65
2.4.1 Er:YAG	65
2.4.2 Er:Glass	66
2.5 Tunable Lasers	68
2.5.1 Alexandrite Laser	72
2.5.2 Ti:Sapphire	77
2.5.3 Cr:LiSAF	79

2.5.4	Tm : YAG	81
2.6	Yb : YAG	84
3.	Laser Oscillator	88
3.1	Operation at Threshold	89
3.2	Gain Saturation	94
3.3	Circulating Power	96
3.4	Oscillator Performance Model	98
3.4.1	Energy-Transfer Mechanisms	98
3.4.2	Laser Output	104
3.5	Relaxation Oscillations	113
3.5.1	Theory	113
3.5.2	Spike Suppression in Solid-State Lasers	116
3.5.3	Gain Switching	117
3.6	Examples of Regenerative Oscillators	119
3.6.1	Ruby	119
3.6.2	Nd : Glass	124
3.6.3	Nd : YAG	125
3.6.4	Alexandrite	132
3.6.5	Laser-Diode-Pumped Systems	134
3.7	Travelling-Wave Oscillator	147
4.	Laser Amplifier	150
4.1	Pulse Amplification	152
4.1.1	Ruby Amplifiers	158
4.1.2	Nd : Glass Amplifiers	163
4.1.3	Nd : YAG Amplifiers	169
4.2	Steady-State Amplification	176
4.2.1	Ruby Amplifier	178
4.2.2	Nd : Glass Amplifier	179
4.3	Signal Distortion	180
4.3.1	Spatial Distortions	180
4.3.2	Temporal Distortions	186
4.4	Gain Limitation and Amplifier Stability	187
4.4.1	Amplified Spontaneous Emission	188
4.4.2	Prelasing and Parasitic Modes	192
5.	Optical Resonator	195
5.1	Transverse Modes	195
5.1.1	Intensity Distribution of Transverse Modes	195
5.1.2	Characteristics of a Gaussian Beam	198
5.1.3	Resonator Configurations	201
5.1.4	Stability of Laser Resonators	206
5.1.5	Diffraction Losses	207

5.1.6	Higher-Order Modes	209
5.1.7	Active Resonator	210
5.1.8	Resonator Sensitivity	212
5.1.9	Mode-Selecting Techniques	216
5.1.10	Examples of Advanced Stable-Resonator Designs ...	224
5.2	Longitudinal Modes	236
5.2.1	Fabry-Perot Resonators	236
5.2.2	Spectral Characteristics of the Laser Output	243
5.2.3	Axial Mode Control	249
5.3	Temporal and Spectral Stability	260
5.3.1	Amplitude Fluctuations	260
5.3.2	Frequency Control	263
5.4	Hardware Design	266
5.5	Unstable Resonators	270
5.5.1	Confocal Positive-Branch Unstable Resonator	273
5.5.2	Negative-Branch Unstable Resonators	276
5.5.3	Variable Reflectivity Output Couplers	278
5.5.4	Gain, Mode Size and Alignment Sensitivity	284
5.6	Wavelength Selection	286
6.	Optical Pump Systems	289
6.1	Pump Sources	289
6.1.1	Flashlamps	293
6.1.2	Continuous Arc Lamps	307
6.1.3	Laser Diodes	312
6.2	Power Supplies	333
6.2.1	Operation of Laser-Diode Arrays	334
6.2.2	Operation of Arc Lamps	337
6.3	Pump Cavities and Coupling Optics	357
6.3.1	Pump Configurations for Arc Lamps and Laser Diodes	359
6.3.2	Energy Transfer Characteristics of Pump Cavities ...	378
6.3.3	Mechanical Design	392
7.	Thermo-Optic Effects and Heat Removal	406
7.1	Cylindrical Geometry	407
7.1.1	CW Operation	408
7.1.2	Single-Shot Operation	429
7.1.3	Repetitively Pulsed Lasers	431
7.2	Cooling Techniques	441
7.2.1	Liquid Cooling	441
7.2.2	Air or Gas Cooling	444
7.2.3	Conductive Cooling	446
7.3	Slab and Disc Geometries	447
7.4	End-Pumped Configurations	463

8. Q-Switching	469
8.1 Q-Switch Theory	469
8.2 Mechanical Devices	479
8.3 Electrooptical Q-Switches	481
8.4 Acoustooptic Q-Switches	501
8.5 Passive Q-Switch	507
8.6 Cavity Dumping	514
9. Mode Locking	520
9.1 Pulse Formation	521
9.2 Passive Mode Locking	526
9.2.1 Pulsed Passive Mode Locking	527
9.2.2 Continuous Wave Passive Mode Locking	534
9.3 Active Mode Locking	545
9.3.1 CW Mode Locking	545
9.3.2 Transient Active Mode Locking	549
9.4 Picosecond Lasers	553
9.4.1 Oscillators	554
9.4.2 Regenerative Amplifiers	560
9.5 Femtosecond Lasers	568
9.5.1 Oscillators	569
9.5.2 Chirped Pulse Amplifiers	578
10. Nonlinear Devices	582
10.1 Harmonic Generation	584
10.1.1 Basic Equations of Second-Harmonic Generation	584
10.1.2 Parameters Affecting the Doubling Efficiency	592
10.1.3 Properties of Nonlinear Crystals	599
10.1.4 Intracavity Frequency Doubling	605
10.1.5 Third-Harmonic Generation	612
10.1.6 Examples of Harmonic Generation	615
10.2 Parametric Oscillators	620
10.2.1 Performance Modeling	624
10.2.2 Materials	636
10.2.3 Design and Performance of Optical Parametric Oscillators	642
10.3 Raman Laser	647
10.3.1 Theory	647
10.3.2 Device Implementation	650
10.3.3 Examples of Raman-Shifted Lasers	652
10.4 Optical Phase Conjugation	656
10.4.1 Basic Considerations	657
10.4.2 Material Properties	659
10.4.3 Focusing Geometry	660

10.4.4	Pump-Beam Properties	661
10.4.5	System Design	663
11.	Damage of Optical Elements	667
11.1	Surface Damage	668
11.2	Inclusion Damage	671
11.3	Self-focusing	672
11.3.1	Whole-Beam Self-focusing	673
11.3.2	Small-Scale Self-focusing	675
11.3.3	Examples of Self-focusing in Nd:YAG Lasers	678
11.4	Damage Threshold of Optical Materials	681
11.4.1	Scaling Laws	681
11.4.2	Laser Host Materials	684
11.4.3	Optical Glass	685
11.4.4	Damage Levels for Nonlinear Materials	686
11.4.5	Dielectric Thin Films	690
11.5	System Design Considerations	694
11.5.1	Choice of Materials	694
11.5.2	Design of System	695
11.5.3	Operation of System	696
Appendix A	Laser Safety	698
Appendix B	Conversion Factors and Constants	704
