

Table of Contents

1 Hybrid Reasoning with Rules and Ontologies	1
<i>Włodzimierz Drabent, Thomas Eiter, Giovambattista Ianni, Thomas Krennwallner, Thomas Lukasiewicz, and Jan Matuszyński</i>	
1.1 Introduction	1
1.2 Overview of Approaches	2
1.2.1 RDF and RDF Schema	2
1.2.2 The Web Ontology Language OWL	5
1.2.3 Rule Languages for Integration	7
1.2.4 Rule Interchange Format RIF	9
1.2.5 Approaches to Integration	9
1.3 Hybrid Rules and Ontologies in REWERSE	12
1.3.1 Extensions of Expressive Non-monotonic Logic Programs by DL-Programs and HEX-Programs	14
1.3.2 DL-Programs	14
1.3.3 HEX-Programs	19
1.3.4 Extensions of Well-Founded Semantics by Hybrid Well-Founded Semantics	26
1.4 Variants and Extensions of the Basic Formalisms	34
1.4.1 Probabilistic DL-Programs	35
1.4.2 Fuzzy DL-Programs	37
1.4.3 CQ-Programs	40
1.5 Conclusion	41
2 Four Lessons in Versatility or How Query Languages Adapt to the Web	50
<i>François Bry, Tim Furche, Benedikt Linse, Alexander Pohl, Antonius Weinzierl, and Olga Yestekhina</i>	
2.1 Introduction	50
2.2 Versatile Data	54
2.2.1 Extensible Markup Language (XML)	54
2.2.2 Resource Description Framework (RDF)	56
2.3 Versatile Queries	58
2.3.1 XML Queries—Examples and Patterns	61
2.3.2 RDF Queries—Examples and Patterns	68
2.3.3 Rules—Separation of Concern and Reasoning	79
2.3.4 State of the Art: The SPARQL Query Language and Its Extensions	82
2.4 Versatile Semantics	96
2.4.1 Simulation as Foundation for a Semantics of Versatile Queries	96

2.4.2	Rules with Negation and Versatile Queries: Local Stratification	100
2.4.3	Rules with Negation and Versatile Queries: Well-Founded Semantics	104
2.4.4	A Relational Semantics for Versatile Queries	107
2.5	Versatile Evaluation	125
2.5.1	Evaluating Queries: Structure Scaling with CIQCAG	126
2.5.2	Evaluating Rules: Subsumption under Rich Unification	142
2.6	Conclusion	152
3	Evolution and Reactivity in the Semantic Web.....	161
	<i>José Júlio Alferes, Michael Eckert, and Wolfgang May</i>	
3.1	Introduction	161
3.2	Starting Point and Related Work.....	164
3.3	Conceptualization of ECA Rules and Their Components: A General Framework for ECA Rules	167
3.3.1	The Rule Level	168
3.3.2	The Event Component	170
3.3.3	The Condition Component	171
3.3.4	The Action Component	172
3.3.5	Languages and Language Borders	173
3.3.6	Languages Types, Service Types, and Tasks	175
3.3.7	Architecture and Processing: Cooperation between Resources	178
3.3.8	The RDF Level: Language Elements and Their Instances as Resources.....	179
3.3.9	MARS Implementation	180
3.3.10	r^3 Implementation	183
3.4	XChange – A Concrete Web-Based ECA Rule Language	184
3.4.1	Representing, Querying, and Constructing Web Data	185
3.4.2	Event-Condition-Action (ECA) Rules.....	187
3.4.3	Events.....	187
3.4.4	Conditions	190
3.4.5	Actions	191
3.4.6	Applications.....	192
3.5	Conclusions and Outlook	194
4	Rule-Based Policy Representations and Reasoning	201
	<i>Piero Andrea Bonatti, Juri Luca De Coi, Daniel Olmedilla, and Luigi Sauro</i>	
4.1	Introduction	201
4.2	A Review of the State-of-the-Art in Policy Languages	202
4.2.1	Related Work	203

4.2.2	Background	203
4.2.3	Presentation of the Considered Policy Languages	205
4.2.4	Presentation of the Considered Criteria	206
4.2.5	Comparison	209
4.2.6	Discussion	215
4.3	A Framework for Semantic Web Policies	216
4.3.1	Policies as Semantic Markup in Protune	217
4.3.2	Negotiations	217
4.3.3	Protune's Policy Language and Framework	219
4.3.4	Explanations: Protune-X	221
4.3.5	The Engine	225
4.3.6	Demo: Policy-Driven Protection and Personalization of Web Content	227
4.3.7	Experimental Evaluation	227
4.3.8	Discussion and Conclusions	229
5	Component Models for Semantic Web Languages	233
	<i>Jakob Henriksson and Uwe Aßmann</i>	
5.1	Introduction	233
5.2	Background	235
5.2.1	Composition Systems and Component Models	235
5.2.2	Web Query Language Xcerpt	237
5.2.3	Description Logics and OWL	239
5.3	State of the Art: Semantic Web Components and Invasive Software Component Models	240
5.3.1	Query Modularization	240
5.3.2	Ontology Modularization	241
5.3.3	Invasive Component Models in Software Engineering	243
5.4	Use-Cases: Components on the Web	249
5.4.1	Modular Xcerpt	250
5.4.2	Role Models as Ontology Components	253
5.5	Universal Component Models	255
5.5.1	Universal Grammar-Based Modularization (U-GBM)	256
5.5.2	Universal Invasive Software Composition (U-ISC)	259
5.5.3	Universal Syntactic Abstractions with Embedded ISC	263
5.6	Example Application: Modular Xcerpt	268
5.7	Conclusions	271
6	Controlled English for Reasoning on the Semantic Web	276
	<i>Juri Luca De Coi, Norbert E. Fuchs, Kaarel Kaljurand, and Tobias Kuhn</i>	
6.1	Why Use Controlled Natural Languages for the Semantic Web?	276

6.2	Controlled Natural Languages: State of the Art	278
6.3	Attempto Controlled English (ACE)	279
6.3.1	Overview of Attempto Controlled English	279
6.3.2	From Attempto Controlled English to First-Order Logic	283
6.3.3	Attempto Parsing Engine (APE)	286
6.4	Fitting ACE into the Semantic Web	287
6.4.1	OWL and SWRL	287
6.4.2	AceRules: Rules in ACE	290
6.4.3	The Protune Policy Language	292
6.4.4	Other Web Languages	295
6.5	ACE Tools for the Semantic Web	295
6.5.1	Attempto Reasoner RACE	295
6.5.2	ACE View Ontology and Rule Editor	297
6.5.3	AceWiki: ACE in a Semantic Wiki	300
6.5.4	Protune	304
6.6	Conclusions	305
7	Semantic Search with GoPubMed	309
	<i>Andreas Doms and Michael Schroeder</i>	
7.1	Biomedical Literature Search	309
7.1.1	Limits of Classical Search	310
7.1.2	Biomedical Search Engines	311
7.1.3	The Ontology-Based Search Paradigm	321
7.2	Answering Biomedical Questions	322
7.2.1	Characterization of Question Types	324
7.2.2	Using Background Knowledge to Answer Questions	326
7.3	Revealing Trends in the Literature	330
7.3.1	Important Topic: Apoptosis	333
7.3.2	Important Topic: Endosome	334
7.3.3	Important Place: Dresden	334
7.3.4	Important Journal: Which Are the 10 Most Frequently Used GO Terms in Nature, Cell and Science?	335
7.3.5	20 Journals for the Molecular Biologist	336
7.4	Conclusion	338
8	Information Integration in Bioinformatics with Ontologies and Standards	343
	<i>Patrick Lambrich, Lena Strömbäck, and He Tan</i>	
8.1	Introduction	343
8.2	Resources	345
8.2.1	Data Sources	345
8.2.2	Ontologies	346
8.2.3	Standards	348

8.3	Integrating the Resources	352
8.3.1	Integration Model	352
8.3.2	Integration of Data Sources	354
8.3.3	Data Sources and Ontologies	355
8.3.4	Ontology Alignment	356
8.3.5	Integrating Standards	365
8.3.6	Connection between Standards and Other Resources	367
8.4	Conclusion	369
