List of Notations	xvii
--------------------------	-------------

I PRELIMINARIES	1
------------------------	----------

1 Digital Transmission and Scrambling	3
1.1 Digital Transmission Systems	4
1.2 Scrambling Functions in Digital Transmission	6
1.3 Digital Signals and Scrambling	7
1.4 Packet-Mode Data Transmission and Scrambling	10
2 Fundamentals of Scrambling Techniques	13
2.1 Frame Synchronous Scrambling	14
2.2 Distributed Sample Scrambling	16
2.3 Self Synchronous Scrambling	17
2.4 Serial Scrambling	19
2.5 Parallel Scrambling	20
2.6 Multibit-Parallel Scrambling	21

II FRAME SYNCHRONOUS SCRAMBLING	25
--	-----------

3 Introduction to Frame Synchronous Scrambling	27
3.1 Operation of FSS	27
3.2 Scrambling Sequences	29
3.3 Shift Register Generators	31

3.4	Organization of the Part	33
4	Sequence Spaces	35
4.1	Definition of Sequence Space	35
4.2	Elementary Basis	36
4.3	Primary Basis	40
4.4	Polynomial Expression of Sequences	43
4.5	Sequence Subspaces	46
4.6	Minimal Sequence Spaces	50
5	Shift Register Generators	55
5.1	Shift Register Generator	55
5.2	Minimal Spaces for SRG Sequences	57
5.3	SRG Spaces	60
5.4	SRG Maximal Spaces	61
5.5	Basic SRGs	65
5.6	Simple and Modular SRGs	70
6	Serial Frame Synchronous Scrambling	79
6.1	Pseudo-Random Binary Sequences	79
6.2	Primitive Sequence Spaces	81
6.3	PRBS Generators	85
7	Parallel Frame Synchronous Scrambling	93
7.1	Parallel Scrambling Sequences	93
7.2	Decimated Sequences	96
7.3	Decomposition of Sequences	100
7.4	Decimation of Irreducible Sequences	104
7.5	Decimation of Power Sequences	111
7.6	Decimation of PRBS	117
7.7	Decimation of Sum Sequences	119
7.8	Parallel Shift Register Generators	122
7.9	Minimal Realizations of PSRG	125
7.10	Simple Realizations of Minimal PSRG	130
8	Multibit-Parallel Frame Synchronous Scrambling	137
8.1	Multibit-Parallel Sequences	138
8.2	Interleaved Sequences	140
8.3	Minimal Space for Parallel Sequences	145
8.4	Parallel Sequences for Irreducible Sequences	148

8.5	Realizations of PSRGs for MPFSS	151
9	Applications to Scrambling in SDH/SONET Transmission	161
9.1	Scrambling of SDH/SONET Signals	161
9.2	Bit-Parallel Scrambling of STM-1/STS-1 Signals	165
9.3	Byte-Parallel Scrambling of STM- <i>N</i> Signal	169
9.3.1	Byte-Parallel Scrambling of STM-4 Signal	170
9.3.2	Byte-Parallel Scrambling of STM-16 Signal	171
9.4	Byte-Parallel Scrambling of STS- <i>N</i> Signal	173
9.4.1	Byte-Parallel Scrambling of STS-3 Signal	175
9.4.2	Byte-Parallel Scrambling of STS-12 Signal	178
III	DISTRIBUTED SAMPLE SCRAMBLING	181
10	Introduction to Distributed Sample Scrambling	183
10.1	Operation of DSS	183
10.2	Three-State Synchronization Mechanism for DSS	185
10.3	Organization of the Part	187
11	Prediction of Scrambling Sequences	189
11.1	Scrambling Space	189
11.2	Scrambling Maximal Space	192
11.3	Scrambling Maximal Spaces for BSRGs	198
11.4	Prediction of Scrambling Sequences	202
12	Serial Distributed Sample Scrambling	207
12.1	Mathematical Modeling	207
12.2	Scramblers for DSS	209
12.2.1	Scrambler SRGs	210
12.2.2	Sampling Times	212
12.3	Descramblers for DSS	213
12.3.1	Descrambler SRGs	214
12.3.2	Correction Times and Correction Vectors	215
12.3.3	Efficient Realization Methods	225
12.4	DSS with Minimized Timing Circuitry	227
12.4.1	Concurrent Sampling	230
12.4.2	Immediate Correction	232

13 Parallel Distributed Sample Scrambling	235
13.1 Considerations for Parallel DSS	235
13.2 PSRGs for PDSS	237
13.3 Parallel Sampling for PDSS	240
13.4 Parallel Correction for PDSS	243
13.4.1 Single Correction	245
13.4.2 Double Correction	251
13.4.3 Multiple Correction	261
14 Multibit-Parallel Distributed Sample Scrambling	267
14.1 Considerations for MPDSS	267
14.2 PSRGs for MPDSS	269
14.3 Parallel Sampling for MPDSS	273
14.4 Parallel Correction for MPDSS	277
15 Three-State Synchronization Mechanism under Sample Errors	287
15.1 Three-State Synchronization Mechanism	287
15.2 Effects of Errored Samples in Acquisition State	290
15.3 Synchronization Verification in Verification State	294
15.4 Synchronization Confirmation in Steady State	298
16 Applications to Cell-Based ATM and High-Speed Data Networks	301
16.1 Scrambling of Cell-Based ATM Signals	301
16.2 Equivalent DSS with Minimized Timing Circuitry	308
16.3 An Optimal DSS Design	311
16.4 Parallel DSS for Cell-Based ATM Signals	317
16.5 Design of Three-State Synchronization Mechanisms	322
16.5.1 Windowed-Observation State Transition Scheme	322
16.5.2 Thresholded-Counting State Transition Scheme	328
16.5.3 Performance Evaluation	330
16.6 Applications to High-Speed Data Networks	333
IV SELF SYNCHRONOUS SCRAMBLING	343
17 Introduction to Self Synchronous Scrambling	345
17.1 Operation of SSS	346
17.2 Signal Alignment	347

17.3 Organization of the Part 348

18 Serial Self Synchronous Scrambling 351

18.1 Scrambled Signals 351

18.2 Descrambled Signals 355

18.3 Self-Synchronization 359

18.4 Error-Multiplication 360

19 Parallel Self Synchronous Scrambling 363

19.1 Parallel-Scrambled and -Descrambled Signals 363

19.2 Parallel Self Synchronous Scrambler 368

19.3 Parallel Self Synchronous Descrambler 374

**20 Applications to Scrambling in SDH-Based ATM Trans-
mission 383**

20.1 Scrambling of SDH-Based ATM Signals 383

20.2 Parallel SSS for Cell Scrambling in SDH-Based ATM Trans-
mission 385

**21 Signal-Alignment with Parallel Self Synchronous Scram-
bling 391**

21.1 Operators for Functional Processors 391

21.2 Number-Operators for Operators 395

21.3 Signal-Detection Tables 400

21.4 Signal-Detection Table Characteristic Expressions 405

21.5 Signal-Detection Tables for Various System Configurations 407

21.5.1 Scrambler Based Systems 408

21.5.2 Permuter Based Systems 408

21.5.3 Permuter-Scrambler Based Systems 409

21.5.4 Scrambler-Permuter Based Systems 409

21.5.5 Scrambler-Permuter-Scrambler Based Systems . . 411

21.5.6 Permuter-Scrambler-Permuter Based Systems . . 412

21.5.7 Summary of Signal-Detection Tables 412

21.6 Applications of Signal-Detection Tables to Signal-Alignment 414

A Facts from Abstract Algebra	421
A.1 Field	421
A.2 Extension of Fields	422
A.3 Irreducible Polynomials	423
A.4 Primitive Polynomials	424
A.5 Others	425
B Facts from Linear Algebra	427
B.1 Vector Space	427
B.2 Minimal Polynomials of Matrices	428
B.3 Properties of Companion Matrix	430
B.4 Similarity of Matrices	435
References	437
Index	441
