

Preface — VII

Acknowledgments — IX

1 Introduction — 1

- 1.1 Setting the stage: What is the problem? — 2
- 1.2 Indeed, what is *higher spin*? — 4
- 1.3 The programs — 5

2 Notes on the history of higher spin interactions — 8

- 2.1 The long 1960s weak and strong interaction physics — 8
- 2.2 A parallel strand of history: systems of particles — 9
 - 2.2.1 Direct interaction particle mechanics and *the no-interaction theorem* — 11
 - 2.2.2 Models derived from strings — 16
 - 2.2.3 The Casalbuoni–Dominici–Gomis–Longhi series of papers — 18
 - 2.2.4 Relativistic harmonic oscillator models — 27
 - 2.2.5 Multiplicative potential models and the Kalb–Van Alstine preprints — 32
 - 2.2.6 The Nagoya University series of papers — 34
 - 2.2.7 Komar’s constrained dynamics approach — 36
 - 2.2.8 Historical notes on action-at-a-distance theory — 40
 - 2.2.9 Beyond the standard Dirac particle interaction program — 42
 - 2.2.10 Bi-local theories, infinite component fields and dynamical groups — 46
 - 2.2.11 Spinning and supersymmetric particles — 47
- 2.3 String theory, supergravity and higher spin theory — 47
- 2.4 Early coupling problems and classic no-go results — 48
 - 2.4.1 Buchdahl’s gravity compatibility investigations — 49
 - 2.4.2 The Velo–Zwanziger problem and Johnson–Sudarshan problem — 50
 - 2.4.3 The Weinberg *S*-matrix argument — 51
 - 2.4.4 The O’Raifeartaigh and Coleman–Mandula theorems — 54
 - 2.4.5 The Weinberg–Witten theorem — 55
- 2.5 Gauge theories of gravitation — 56
 - 2.5.1 R. Utiyama — 57
 - 2.5.2 T. W. B. Kibble — 64
 - 2.5.3 D. W. Sciama — 69
- 2.6 The Fronsdal program — 70
 - 2.6.1 The early Fronsdal (generalized Gupta) program — 70
 - 2.6.2 The BBvD general analysis — 72
 - 2.6.3 The Fronsdal program in the 1980s after BBvD — 75
- 2.7 The nonlocality circle of problems — 76

3	Algebraic structures in higher spin theory — 78
3.1	Abstract algebras and operations on algebras — 78
3.1.1	The concepts of Grassmann parity and $\mathbb{Z}_2$ grading — 79
3.1.2	Associative algebras — 81
3.1.3	Lie algebras — 81
3.1.4	Structure preserving maps and representations of algebras — 82
3.1.5	Automorphisms, conjugations and involutions — 83
3.1.6	Real and complex algebras — 84
3.1.7	Graded and filtered algebras — 85
3.1.8	Derivations and differentials — 86
3.1.9	Cohomology and homology — 87
3.1.10	Local cohomology in field theory — 90
3.2	Higher spin related algebras — 90
3.2.1	The Heisenberg algebra — 92
3.2.2	The Weyl algebra — 93
3.3	Star product — 95
3.3.1	The Weyl map — 96
3.3.2	The Moyal product — 98
3.3.3	The Weyl map and the Moyal product — 99
3.3.4	Integral form of the star product — 101
3.4	Universal enveloping algebras — 102
3.5	General transformations revisited — 105
3.5.1	Maurer–Cartan theory — 105
3.5.2	Some more differential geometry recollected — 106
3.5.3	Lie algebras of Lie groups — 109
3.5.4	The structure constants — 113
3.5.5	Frames, coframes and the structure of Lie algebras — 114
3.6	Higher-order differential operators — 116
3.6.1	Higher-order differential operators and tentative higher spin algebras — 116
3.6.2	Two (or more) approaches to higher spin gauge algebras — 118
3.6.3	Some general properties of higher-order differential operators — 121
3.6.4	The Weyl algebra and higher-order differential operators — 122
3.6.5	Hamiltonian cotangent operators and higher-order differential operators — 123
3.6.6	A few steps into the theory of higher spin diffeomorphisms — 124
3.6.7	Toward the Fradkin–Vasiliev higher spin algebras — 125
4	General theory of interactions — 130
4.1	The group manifold approach — 130
4.1.1	Maurer–Cartan theory — 131
4.1.2	Gauge vs. general coordinate transformations — 134

4.1.3	Horizontality and factorization —	136
4.2	The Fronsda1-BBVd general theory of deformation —	138
4.2.1	The BBVd general analysis analyzed —	138
4.3	BRST-BV antifield theory —	142
4.3.1	Gauge fields, antifields and transformations —	142
4.3.2	Solution of the master equation —	147
4.3.3	The Koszul-Tate and longitudinal differentials and homology —	148
4.3.4	Homological perturbation theory—Lagrangian version —	150
4.3.5	Solution of the master equation: summary —	152
4.3.6	Space-time locality of the BRST-BV formalism —	152
4.3.7	Deforming the master equation and locality of interactions —	153
4.3.8	The algebraic Poincaré lemma and the descent equations —	156
4.4	Some further notes on Noether coupling techniques —	159
4.4.1	The Stasheff synthesis of ideas —	159
4.4.2	Strongly homotopy Lie algebras —	161
4.4.3	Jet spaces, Lagrangian field theory and locality —	161
4.4.4	Syntactic-semantic approach to Lie_∞ algebras in interacting field theory —	163
4.4.5	The Lie_∞ mathematical elaboration of the BBVd theory —	169

5 Covariant approaches in Minkowski space-time — 171

5.1	Spin-3 cubic covariant interactions—BBVd —	171
5.1.1	The spin-3 cubic self-interaction —	171
5.1.2	Gauge algebra problems —	173
5.2	The covariant BRST approach —	175
5.2.1	Vertex operator approach to interactions—a reminder —	175
5.2.2	The first mid-1980s BRST attempt at interactions —	176
5.2.3	The 1988 Yang-Mills producing higher spin vertex —	178
5.2.4	General analysis of the BRST approach —	183
5.2.5	Follow up papers on the BRST approach —	185
5.2.6	Mechanics BRST vs. field theory BV formalism —	185
5.3	Non-BRST approaches—post millennium investigations —	187
5.4	Obstructions to the Fronsda1-BBVd program —	195
5.4.1	Some general properties of interactions —	195
5.4.2	Gauge invariants —	196
5.4.3	Spin 3 revisited —	197
5.4.4	Strong obstruction of the BBVd vertex —	198
5.4.5	A few more references —	199
5.4.6	Chapter 5 epilogue —	200

6 Light-front interactions — 201

6.1	The cubic interactions: review —	201
-----	----------------------------------	------------

6.1.1	All possible cubic interactions in four dimensions —	203
6.1.2	Vertex operator formalism for cubic vertices —	205
6.2	Nonlinear realization of the Poincaré algebra —	208
6.2.1	Transformations and Fock field commutators —	208
6.2.2	The $\mathcal{D} - \mathcal{D}$ algebra —	209
6.3	Computing the cubic interactions —	210
6.3.1	The $\mathcal{K} - \mathcal{D}$ algebra —	210
6.3.2	Computation of commutators to cubic order —	211
6.3.3	Immediate restrictions from the $\mathcal{K} - \mathcal{D}$ algebra: cubic and arbitrary order —	212
6.3.4	Reminder on Fock space fields —	213
6.3.5	Preliminary ansatz for the vertex functions —	214
6.3.6	Further restrictions from the $\mathcal{K} - \mathcal{D}$ algebra —	215
6.3.7	Restrictions on the dynamical Lorentz generators —	217
6.3.8	Definite ansatz for the cubic vertex functions —	219
6.3.9	Derivation of all cubic vertices in four dimensions —	220
6.3.10	The cubic differential equations —	222
6.3.11	Solution of the cubic differential equations —	223
6.3.12	Summary of cubic interactions and the $\exp \Delta$ question —	225
6.3.13	Comparison to the formalism of Metsaev and Ponomarev–Skvortsov —	226
6.4	Some deeper properties of the Poincaré algebra —	228
6.4.1	“Goodness” split of the Poincaré algebra —	229
6.4.2	The little group and the Hamiltonians —	230
6.5	Short orientation on recent developments —	231
6.5.1	The Metsaev quartic analysis —	231
6.5.2	The Ponomarev–Skvortsov elaboration —	233
6.5.3	The cubic chiral theory —	235
6.5.4	Short guide to higher dimensions and supersymmetry —	237
6.6	Chapters 5 and 6 epilogue and a research question —	237
7	Higher spin in AdS and the Vasiliev theory —	239
7.1	The geometry and algebra of anti-de Sitter space-time —	239
7.1.1	Construction of de Sitter and anti-de Sitter space-times —	240
7.1.2	Symmetries of anti-de Sitter space-time —	242
7.1.3	Jordan split of the AdS algebra —	243
7.1.4	Outline of representations —	245
7.1.5	Oscillator representations and singletons —	251
7.1.6	Gauging the AdS algebra —	251
7.2	The Vasiliev theory: introductory remarks —	253
7.2.1	Dropping the Vasiliev equations on the reader —	255
7.3	Vasiliev free field equations —	257
7.3.1	Higher spin fields in AdS —	257

7.3.2	Star products (and symbol calculus) —	262
7.3.3	AdS background, free fields and linearized curvatures —	264
7.3.4	Higher spin algebras —	272
7.3.5	Free differential algebras —	274
7.4	The nonlinear theory —	277
7.4.1	The fields and the doubling of the oscillators —	277
7.4.2	The Vasiliev star product —	278
7.4.3	Klein operators, supersymmetry and the twisted adjoint representation —	280
7.4.4	The first three Vasiliev equations —	282
7.4.5	The second two “nonlinear” equations —	282
7.4.6	Perturbative expansion of the equations —	283
7.4.7	Epilogue: some comments and where to go from here? —	289
8	Archaeology of the Vasiliev theory —	291
8.1	Archaeology? —	291
8.2	The free fields sequence —	296
8.2.1	The paper FF1 —	297
8.2.2	Papers FF2b and FF2f —	304
8.2.3	The paper FF3 —	304
8.3	The algebra sequence of papers —	308
8.3.1	The A1 paper —	309
8.3.2	The A2 paper —	318
8.3.3	The A3 paper —	324
8.3.4	The A4 and A5 papers —	334
8.4	The cubic interaction papers —	335
8.4.1	The CI1 paper —	336
8.4.2	The CI2 paper —	338
8.5	The free differential algebra sequence of papers —	341
8.5.1	The FDA1 paper —	342
8.5.2	The FDA2 paper —	343
8.5.3	The FDA3 paper —	353
8.5.4	The FDA4 paper —	357
8.6	The Vasiliev equations sequence of papers —	358
8.6.1	The VE1 paper —	359
8.6.2	The VE2 paper —	361
8.6.3	The VE3 paper —	365
8.6.4	The VE4 paper —	366
8.7	The review and generalization era —	367
8.8	What was achieved during 1986–1992? —	368
8.8.1	Motivations for Vasiliev theory —	368
8.8.2	The Vasiliev theory and physics —	369

- 8.8.3 Higher derivatives — **371**
- 8.8.4 Epilogue and a personal reflection — **372**

Bibliography — 373

Index — 387
