

## Index

### *a*

Aging  
 brain mechanisms of  
     mastication 229–232  
 brain mechanisms of  
     swallowing 232–234  
 definition 220–221  
 healthy aging 221–222  
 Arterial spin labeling  
     (ASL) 14  
 Axial diffusivity 43  
 Alzheimer's diseases. *See*  
     Neurodegenerative  
     disorders

### *b*

Basal ganglia  
 motor control 96–97  
 Blood-oxygen-level-dependent  
     (BOLD) signal 26–27,  
     28–29  
 functional neuroimaging  
     26–27  
 limitations 29  
 neurophysiological nature  
     28–29  
 Brain  
     connections with dentistry  
         4–6  
     cross-disciplinary research 6  
     dental education 5–6  
 Brain connectivity 45–56  
     functional connectivity 46–48

### structural connectivity

48–50

Brain connectome 45–46,  
 50–55

### network-based approach

50–55

    global metrics 52  
     local metrics 52–53

### Brainstem 97–98

### Brain–stomatognathic axis 17–21

### Burning mouth syndrome 187

### *c*

### Central pattern generators

97–98

### Central sensitization

    allodynia 174  
     hyperalgesia 174  
     neuroimaging findings  
         174–178

### Cerebellum

    age-related effect 217  
     mastication 105–106  
     motor control 97

### Cerebrospinal fluid (CSF)

    age-related effect 218

### Chronic orofacial pain

    burning mouth syndrome 187  
     clinical applications  
         188–190

### neurochemical features

187–188

### temporomandibular

disorders 179–182

### trigeminal neuralgia 182–187

### Cortical masticatory area

98–99

### *d*

### Dental implant

    sensory feedback 134–135

### Default mode network

    chronic pain 166–168  
     chronic orofacial pain  
         188–190

### Dental fear and anxiety

    definition 191–192  
     neuroimaging findings  
         193–199

### Dental pain, acute

    neuroimaging findings  
         162–164

### Dental phobia

    neuroimaging findings  
         196–198  
     functional features 196–197  
     structural features 197–198  
     clinical applications  
         198–199

### Diffusion magnetic resonance

    imaging (dMRI) 13,  
     43–44

    microstructure of white

    matter 43–44

    tractography 44

Diffusion tensor imaging (DTI) 13, 43–44

Dysphagia  
neuroimaging findings 272–274  
treatment via the brain approach 274  
treatment via the oral approach 272, 274

## e

Electroencephalography (EEG) 12  
Emotion  
assessment  
anxiety 78–79  
depressive symptoms 79  
fear of pain 79  
pain catastrophizing 79  
pain vigilance and awareness 80  
clinical considerations 80–81  
threat value 147–148  
connections to pain 168–169

## f

Food processing  
neuroimaging findings 140–141  
Fractional anisotropy 43–44  
biological significance 40  
Functional connectivity 46–48.  
*See also* rs-fMRI  
Functional integration 46  
Functional magnetic resonance imaging (fMRI) 25–29.  
*See also* MRI  
methodological issues 32–34  
statistical analysis 36–38  
Functional near-infrared spectroscopy (FNIRS)  
brain mechanisms of mastication 101–105  
Functional segregation 46

## g

Gustation 136–141  
age-related effect 225  
animal research 136–137  
neuroimaging findings 137–141

## i

Intrinsic brain functions 46–47  
Intrinsic functional connectivity 46–47.  
*See also* rs-fMRI  
age-related effect 218–219

## m

Magnetic resonance imaging (MRI)  
functional MRI 30–38  
historical view 25–27  
ionizing radiation-free 25  
methodological considerations 27–29  
practical advantages 27  
structural MRI 39–44

Magnetic resonance spectroscopy (MRS)  
neurochemical features 187–188

Magnetoencephalography (MEG) 12  
brain mechanisms of

mastication 101–105

Mastication  
age-related effect 226–228  
assessment of subjective experience 59–62  
animal research 98–99  
brain mechanisms 101–108  
experimental design 99–101

Masticatory performance  
age-related effect 226–228  
cutting ability 59–60  
mixing ability 61–62  
color-changeable chewing-gum test 61–62  
two-color chewing-gum test 61  
number of chewing cycles 62

Maximal biting force 62–63

Maximal tongue pressure 222–223

Mean diffusivity 43–44

Mirror neuron 118

Motor function

motor control 91–92

motor learning 92, 116–120

definition 92  
error-based learning 116  
reinforcement learning 116–117

motor program 92

Multisensory integration 149–153

connections to gustation 151–152

connections to somatosensation 152

## n

Neurodegenerative disorders  
assessment 77–78  
cognitive impairment  
neuroimaging findings 219, 242–243  
oral-cognitive association 235–240  
other neurodegenerative disorders  
neuroimaging findings 243–244  
translational research 244–245

Neuroimaging 6–14  
definition 6–7  
approaches of neuroimaging 8, 12–14

Neuroplasticity 171–172, 254–256

brain plasticity 254–256

definition 254

limitations 259–260

synaptic plasticity 256–257

Nucleus accumbens  
reward processing 146  
connections to chronic pain 168–169

Numerical rating scale 69–70.  
*See also* Pain scale

## o

Occlusal dysesthesia 135

Orofacial perceptual distortion 135

Oral somatoperception 131.  
*See also* Oral stereognosis

Oral somatorepresentation  
131–132  
body image 131  
somaesthesia 132

Oral somatosensation 129–131  
oral mechanoreceptors  
129–131  
neuroimaging findings 133

Oral somatosensory processing  
128–129

Oral stereognosis 63, 131  
definition 63  
neuroimaging findings  
133–134

**P**

Pain  
acute pain  
cognitive-affective  
factors 164–166  
neuroimaging findings  
162–164  
age-related effect 225  
assessment. *See* Pain Scale  
chronic pain  
classification 171  
cognitive-affective  
factors 168–169  
definition 170–171  
neuroimaging findings  
166–168  
definition 161  
experimental design 74–76

Pain scale 69–72

Parkinson's disease. *See*  
Neurodegenerative  
disorders

Positron emission tomography  
(PET) 12

Prefrontal cortex  
mastication 104–105  
swallowing 114

Premotor cortex  
action observation 118  
mastication 104  
motor control 94–95  
swallowing 111–114

Primary motor cortex  
mastication 102–104

swallowing 111–114  
motor control 93–94

Primary somatosensory cortex  
mastication 102–104  
swallowing 111–114

Psychophysics 68–69

**Q**

Quantitative sensory testing  
(QST)  
clinical application 72–73  
definition 72

**R**

Radial diffusivity 43–44

Repetitive saliva swallowing  
test 64

Resting-state functional  
magnetic resonance  
imaging (rs-fMRI)  
47–48

**S**

Salivary flow rate  
age-related effect 223

Sensitization  
central 172–174. *See*  
Central sensitization  
definition 172–174  
peripheral 172–174

Sensorimotor adaptation  
118–120  
brain mechanisms 119–120  
definition 118  
experimental design 119

Sensorimotor integration  
117–118

Spatial resolution 27–28, 29

Structural connectivity 48–50  
*See also* dMRI

based on tractography  
48–49

based on structural  
covariance 49–50

Structural magnetic resonance  
imaging (sMRI) 39–44  
*See also* MRI

Supplementary motor area  
mastication 104

motor control 95–96  
swallowing 111–114

Surface-based analysis 41–43  
automated segmentation 42  
cortical thickness 42  
methodological issues  
42–43

Swallowing  
age-related effect 228  
assessment of subjective  
experience 65–66  
animal research 109–110  
brain mechanisms 110–114  
experimental design  
saliva swallowing task  
110–111  
water swallowing task  
110–111

**T**

Temporal resolution 27–28,  
29

Temporomandibular disorders  
(TMD) 179–182  
neuroimaging findings  
179–182  
functional features 179–180  
structural features 180–182

Tractography 44, 48–49. *See*  
*also* dMRI

Trigeminal neuralgia  
neuroimaging findings  
182–187  
functional features 186–187  
structural features  
184–186

Trigeminal neuropathic  
pain 182–187
