

Table of Contents

Invited Presentations

P Automata: Concepts, Results, and New Aspects	1
<i>Erzsébet Csuhaj-Varjú</i>	
Computational Nature of Processes Induced by Biochemical Reactions	16
<i>Andrzej Ehrenfeucht and Grzegorz Rozenberg</i>	
Transition and Halting Modes in (Tissue) P Systems	18
<i>Rudolf Freund</i>	
Conformon P Systems and Topology of Information Flow	30
<i>Pierluigi Frisco</i>	
Formal Verification and Testing Based on P Systems	54
<i>Marian Gheorghe, Florentin Ipate, and Ciprian Dragomir</i>	
A Look Back at Some Early Results in Membrane Computing	66
<i>Oscar H. Ibarra</i>	
From P to MP Systems	74
<i>Vincenzo Manca</i>	
The Biological Cell in Spectacle	95
<i>Solomon Marcus</i>	
Energy-Based Models of P Systems	104
<i>Giancarlo Mauri, Alberto Leporati, and Claudio Zandron</i>	
A Computational Complexity Theory in Membrane Computing	125
<i>Mario J. Pérez-Jiménez</i>	

Regular Presentations

Evolving by Maximizing the Number of Rules: Complexity Study	149
<i>Oana Agrigoroaiei, Gabriel Ciobanu, and Andreas Resios</i>	
On Reversibility and Determinism in P Systems	158
<i>Artiom Alhazov and Kenichi Morita</i>	
Typed Membrane Systems	169
<i>Bogdan Aman and Gabriel Ciobanu</i>	

A P System Based Model of an Ecosystem of Some Scavenger Birds	182
<i>Mónica Cardona, Maria Angels Colomer, Antoni Margalida, Ignacio Pérez-Hurtado, Mario J. Pérez-Jiménez, and Delfí Sanuy</i>	
Metabolic P System Flux Regulation by Artificial Neural Networks	196
<i>Alberto Castellini, Vincenzo Manca, and Yasuhiro Suzuki</i>	
A Novel Variant of P Systems for the Modelling and Simulation of Biochemical Systems	210
<i>Paolo Cazzaniga, Giancarlo Mauri, Luciano Milanesi, Ettore Mosca, and Dario Pescini</i>	
Implementing P Systems Parallelism by Means of GPUs	227
<i>Jose M. Cecilia, José M. García, Ginés D. Guerrero, Miguel A. Martínez del-Amor, Ignacio Pérez-Hurtado, and Mario J. Pérez-Jiménez</i>	
Regulation and Covering Problems in MP Systems	242
<i>Giuditta Franco, Vincenzo Manca, and Roberto Pagliarini</i>	
(Tissue) P Systems with Hybrid Transition Modes	252
<i>Rudolf Freund and Marian Kogler</i>	
An Overview of P-Lingua 2.0	264
<i>Manuel García-Quismondo, Rosa Gutiérrez-Escudero, Ignacio Pérez-Hurtado, Mario J. Pérez-Jiménez, and Agustín Riscos-Núñez</i>	
Characterizing Tractability by Tissue-Like P Systems	289
<i>Rosa Gutiérrez-Escudero, Mario J. Pérez-Jiménez, and Miquel Rius-Font</i>	
Searching Previous Configurations in Membrane Computing	301
<i>Miguel A. Gutiérrez-Naranjo and Mario J. Pérez-Jiménez</i>	
Modelling Signalling Networks with Incomplete Information about Protein Activation States: A P System Framework of the KaiABC Oscillator	316
<i>Thomas Hinze, Thorsten Lenser, Gabi Escuela, Ines Heiland, and Stefan Schuster</i>	
Solving NP-Complete Problems by Spiking Neural P Systems with Budding Rules	335
<i>Tseren-Onolt Ishdorj, Alberto Leporati, Linqiang Pan, and Jun Wang</i>	
Tuning P Systems for Solving the Broadcasting Problem	354
<i>Raluca Lefticaru, Florentin Ipate, Marian Gheorghe, and Gexiang Zhang</i>	

An Improved Membrane Algorithm for Solving Time-Frequency Atom Decomposition	371
<i>Chunxiu Liu, Gexiang Zhang, Hongwen Liu, Marian Gheorghe, and Florentin Ipate</i>	
A Region-Oriented Hardware Implementation for Membrane Computing Applications	385
<i>Van Nguyen, David Kearney, and Gianpaolo Gioiosa</i>	
Discovering the Membrane Topology of Hyperdag P Systems	410
<i>Radu Nicolescu, Michael J. Dinneen, and Yun-Bum Kim</i>	
A Note on Small Universal Spiking Neural P Systems	436
<i>Linqiang Pan and Xiangxiang Zeng</i>	
On the Power of Computing with Proteins on Membranes	448
<i>Petr Sosík, Andrei Păun, Alfonso Rodríguez-Patón, and David Pérez</i>	
An Efficient Simulation of Polynomial-Space Turing Machines by P Systems with Active Membranes	461
<i>Andrea Valsecchi, Antonio E. Porreca, Alberto Leporati, Giancarlo Mauri, and Claudio Zandron</i>	
Look-Ahead Evolution for P Systems	479
<i>Sergey Verlan</i>	
Author Index	487
