

Contents

Preface	iv
Acknowledgments	vi
About the Companion Website	viii
1 Earth materials and the geosphere	1
2 Atoms, elements, bonds, and coordination polyhedra	22
3 Atomic substitution, phase diagrams, and isotopes	50
4 Crystallography	83
5 Mineral properties and rock-forming minerals	120
6 Optical identification of minerals	160
7 Igneous rock texture, composition, and classification	199
8 Magma and intrusive structures	235
9 Volcanic features and landforms	262
10 Igneous rock associations	300
11 Weathering, sediment production, and soils	342
12 The sedimentary cycle: erosion, transportation, deposition, sedimentary structures, and environments	381
13 Detrital sediments and sedimentary rocks	418
14 Biochemical sedimentary rocks	454
15 Metamorphism	503
16 Metamorphism: stress, deformation, and structures	524
17 Texture and classification of metamorphic rocks	554
18 Metamorphic zones, facies, and facies series	578
19 Mineral resources and hazards	619
Index	663
