Microscopic Reversibility and Macroscopic Behavior: Physical Explanations and Mathematical Derivations . 1

J.L. Lebowitz

1	Introduction	2
2	The Problem of Macroscopic Irreversibility	5
3	Boltzmann's Answer	6
4	The Use of Probability	8
5	Initial Conditions	9
6	Origin of Low-Entropy States	10
7	Irreversibility and Macroscopic Stability	13
8	Boltzmann vs. Gibbs Entropies	17
9	Remarks	18
10	Typical vs. Averaged Behavior	18

Twenty-Five Years of Non-Equilibrium Statistical Mechanics: Towards a Better Understanding of Dense Fluids 21

E.G.D. Cohen

1	Introduction	21
2	Divergences, Green-Kubo Relations, Long-Time Tails, Vortex Diffusion	22
3	Long-Range Non-Equilibrium Correlations, Neutron Scattering, Cage Diffusion, Fast and Slow Sound	28
4	Lattice Gas Cellular Automata, Transport Coefficients, and Lyapunov Exponents	37
5	Analogy Atomic Liquids and Concentrated Colloidal Suspensions	39
6	Conclusion	42

Models for Dissipation in Quantum Mechanics	51
<i>N.G. van Kampen</i>	
1 The Problem	51
2 First Model: Free Particle	53
3 Second Model: Harmonic Oscillator	54
Appendix	57
Brownian Motion Theory:	
Properties of Non-Linear Langevin Equations	60
<i>P. Mazur</i>	
1 Introduction: Theory and Theories of Brownian Motion	60
2 The Random Force Autocorrelation Function	63
3 When and Why is the Random Force a Gaussian Process?	64
4 The Genuinely Non-Linear Case	67
Non-Equilibrium, Phase Transition, and Related Problems	70
<i>K. Kawasaki</i>	
1 Introduction	70
2 Recent Period	72
3 Modern Period	76
4 Dynamics of Two-Dimensional Foams	77
5 Discussion	80
Simulation of the Consistent Boltzmann Equation for Hard Spheres and Its Extension to Higher Densities ..	82
<i>F.J. Alexander, A.L. Garcia, and B.J. Alder</i>	
1 Introduction	82
2 Non-ideal Gas DSMC	83
3 Dense Gas DSMC	84
4 Computer Simulations	84
5 Efficiency	88
6 Conclusions	88
Over Two Decades of Pattern Formation:	
A Personal Perspective	91
<i>G. Ahlers</i>	
1 Introduction	91
2 The 1970's and Before	94

3	The 1980's	101
4	The 1990's	112
5	Outlook	117
	Fluctuations in the Steady State	125
	<i>R. Graham</i>	
1	Introduction	125
2	Potential Plateaus	128
3	Noisy Attractors	130
4	Potential Plateaus and Escape Times Near Bifurcations	131
5	Conclusion	133
	Slow Non-Equilibrium Dynamics	135
	<i>G. Parisi</i>	
1	Introduction	135
2	Local Equilibrium States	136
3	The Non Equilibrium Equations	138
4	Real Glasses	140
5	Conclusions	141
	Theory of Glass Transition in Spin Glasses, Orientational Glasses and Structural Glasses	143
	<i>K. Binder</i>	
1	Introduction: Basic Facts and Concepts	143
2	Orientational Glasses	146
3	Towards the Modeling of the Glass Transition in Amorphous Polymers	152
4	Concluding Remarks	157
	Evolution of Order Parameters in Disordered Spin Systems. A Closure Procedure	161
	<i>D. Sherrington and A.C.C. Coolen</i>	
1	Derivation of Closed Macroscopic Flow Equations	161
2	Results for the Hopfield Model	166
3	Results for the Sherrington-Kirkpatrick Model	169
4	An Exactly Solvable Toy Model	173
5	Summary	176

Elastic Instabilities in Crystal Growth	177
<i>J. Villain, C. Duport, and P. Nozières</i>	
1 Introduction	177
2 The Asaro-Tiller-Grinfeld Instability	179
3 The Grinfeld Instability on a Singular Surface	182
4 Dynamics in the Step Flow Regime: Step Bunching Instability	184
5 Other Instabilities and Other Mechanisms	186
Vapor Phase Nucleation: Molecular Mechanisms for Embryo Development	189
<i>H. Reiss, C.L. Weakliem, and H.M. Ellerby</i>	
1 Introduction	189
2 The Fluctuation Cluster	190
3 Characteristics of $W_i(v)$	191
4 Rate Theory	193
5 Nucleation Rate Based on the MLDM	194
6 Summary	197
Chaos in Lorentz Lattice Gases	199
<i>M.H. Ernst and J.R. Dorfman</i>	
1 Introduction	199
2 Chapman-Kolmogorov Equation	200
3 Lorentz Lattice Gas	201
4 Deterministic Map	202
5 Lyapunov Exponents for Random Walks	203
6 Links Between Chaos and Kinetic Theory	205
7 Kinetic Theory of Closed Systems	207
8 Conclusions and Perspectives	208
Dynamics of Reptation	211
<i>J.D. Balkenende, J.A. Leegwater, and J.M.J. van Leeuwen</i>	
Introduction	211
1 The Master Equation	213
2 The Drift Velocity	216
3 Generalizations of the Drift Formula	218
4 Long Polymers	220
5 The Fast Extron Limit	222
6 Discussion	225

Non-Equilibrium Fluctuations in Simple Fluids	227
<i>J. Dufty and M. C. Marchetti</i>	
1 Introduction	227
2 Generating Functional	228
3 The Boltzmann Gas	231
4 The Hard Sphere Enskog Fluid	233
5 Practical Applications	235
6 Discussion	238
Long Time Tails in Stress Correlation Functions	240
<i>M.H.J. Hagen, C.P. Lowe, and D. Frenkel</i>	
1 Introduction	240
2 Lattice-Boltzmann Model	242
3 Results	245
4 Conclusions	249
New Advances in Laplacian Growth Models	250
<i>F. Guinea, O. Pla, E. Louis, and V. Hakim</i>	
1 Introduction	250
2 Morphologies in the Dielectric Breakdown Model	252
3 Fracture by Thermal Stresses	255
4 Conclusions	257
Slow Dynamics and Linear Relaxation	259
<i>B.U. Felderhof</i>	
1 Introduction	259
2 Slow Dynamics	260
3 Pole Structure	263
4 Diffusion in a Potential	266
5 Discussion	267
Driven Tunneling: New Possibilities for Coherent and Incoherent Quantum Transport	269
<i>T. Dittrich, P. Hänggi, B. Oelschlägel, and R. Utermann</i>	
1 Introduction	269
2 The Model and Its Symmetries	270
3 Driven Tunneling and Localization	271
4 Tunnel Splittings and the Onset of Chaos	273

5	Driven Tunneling with Dissipation	275
6	Summary	277
From the Random Sequential Adsorption to the Ballistic Model		282
<i>P. Schaaf</i>		
1	Introduction	282
2	Experimental Results	283
3	Simulation Results	287
4	From the RSA to the Ballistic Model	291
5	Conclusion	294
High-Frequency Viscosity of a Dilute Polydisperse Emulsion		296
<i>R.B. Jones</i>		
1	Introduction	296
2	Polydisperse Formalism	297
3	Droplets	299
4	Results and Discussion	300
Mesoscopic Theory of Liquid Crystals		303
<i>W.Muschik, H. Ehrentraut, C. Papenfuss, and S. Blenk</i>		
1	Introduction	303
2	Mesoscopic Concept	304
3	Orientational Balances	305
4	Alignment Tensors	308
5	Remark on Constitutive Equations	309
On the Microscopic Theory of Phase Coexistence		312
<i>S. Miracle Solé</i>		
1	Introduction	312
2	Gibbs States and Interfaces	312
3	The Surface Sension	314
4	The Step Free Energy	315
5	Facets in the Equilibrium Crystal	317
6	Nucleation and Growing Crystals	318

A Non-Equilibrium Phase Transition Induced by Multiplicative Noise	322
<i>C. van den Broeck, J.M.R. Parrondo, and R. Toral</i>	
1 Introduction	322
2 Mean Field Model	323
3 Noise-Induced Phase Transition	324
4 Discussion	325
Electric Field Domains in Superlattices: Dynamics	327
<i>L.L. Bonilla, J.A. Cuesta, J. Galán, F.C. Martínez, and J.M. Molera</i>	
1 Introduction	327
2 Steady States	331
3 Phase Diagram and PC Time-Dependent Oscillations	332
4 Final Remarks	336
Molecular Dynamics Simulation of Phase Separation and Domain Growth	338
<i>S. Torvaerd</i>	
1 Non-Equilibrium Molecular Dynamics	338
2 MD of Phase Separations in 2 Dimensional Mixtures	340
Finite-Size Effects in the Kardar-Parisi-Zhang Equation ..	344
<i>R. Toral and B. Forrest</i>	
Competing Scaling Behaviours in the Late Stage of Growth Kinetics	352
<i>A. Coniglio, P. Ruggiero, and M. Zannetti</i>	
Stretched-Exponential Relaxation of Transient Electric Birefringence in Polymer-Like Reverse Micelles	363
<i>G.J.M. Koper, C. Cavaco, and P. Schurtenberger</i>	
1 Introduction	363
2 Theory	364
3 Materials and Methods	366
4 Results and Discussion	367
