Preface ix

Note to the Reader xiii

List of Illustrations xv

Translator's Remarks xvii

0. Introduction 1

0.1 Bernhard Riemann in his time 1

0.1.1 His life and the development of his personality 1

0.1.2 The political and economic situation 3

0.1.3 Upbringing and education 5

0.1.4 Riemann's homeland 9

0.1.5 Göttingen and Berlin as centers of study 17

0.1.6 Riemann as full professor: 1859–1866 22

0.2 The golden 1850s in Göttingen: From Gauss and Dirichlet
to Riemann and Dedekind 24

0.2.1 Riemann and Dedekind: Personal circumstances 24

0.2.2 Towards change in mathematics 33

0.2.3 Snapshots by an English observer 36

0.3 Influences in the final years:
Riemann between Germany and Italy 39

0.4 Competing conceptions of analysis before Riemann 43

0.4.1 Riemann in the historical evolution of analysis: An overview 43

0.4.2 Algebraic analysis 46

0.4.3 Infinitesimal analysis 52

0.4.4 Geometric deliberations: Fourier 55

0.4.5 The limit conception: Newton 56

0.4.6 Towards epsilontics: Cauchy and Dirichlet 57

1. Complex Analysis 64

1.1 The genesis of complex analysis up to Riemann's time 64

1.1.1 Preliminary remarks 64

1.1.2 The complex numbers 65

1.1.3 Complex functions and their derivatives 69

1.1.4 Integration 73

1.1.5	Power series	77
1.1.6	Further applications	84
1.1.7	Multivalued functions and Riemann surfaces	88
1.1.8	Doubly periodic functions	92
1.2	The dissertation of 1851	96
1.2.1	Riemann's view of the motives for the paper: Article 20 of the dissertation, Part I	96
1.2.2	A short account of the contents of the dissertation	99
1.2.3	Riemann's summary of the dissertation. The program: Article 20, and Part II, Article 22	101
1.2.4	On the prehistory of the dissertation	107
1.2.5	The effect of the dissertation	118
1.3	The elaborations	124
1.3.1	Ordinary differential equations	124
1.3.2	Analysis as the source of topology	130
1.3.3	Abel's theorem	133
1.3.4	Algebraic curves	139
1.3.5	Minimal surfaces	142
1.3.6	Riemann's students and their notes on function theory	144
1.3.7	Later evaluations	147
1.3.8	Dedekind and the algebraization of complex function theory	152
1.4	The zeta function and the distribution of primes	162
1.4.1	Preliminary remarks	162
1.4.2	An approach	163
1.4.3	The functional equation	169
1.4.4	Riemann's explicit formula for the prime number function	173
1.4.5	The zeros and the Riemann hypothesis	175
1.4.6	The Nachlass	176
1.4.7	The evaluations	178
2.	Real Analysis	181
	Preliminary remarks	181
2.1	Foundations of real analysis	181
2.1.1	The concept of an integral	181
2.1.2	Rigor in analysis	185
2.1.3	The new status of special cases: Examples and counterexamples	187
2.2	Trigonometric series before Riemann	191
2.2.1	Preliminary remarks	191
2.2.2	From Euler to Fourier	193

2.2.3	On the development of function concepts	196
2.2.4	From Fourier to Dirichlet	199
2.3	Riemann's results	204
2.3.1	Application of the concept of the integral to the Fourier coefficients	204
2.3.2	Riemann's associated function $F(x)$	206
2.4	Trigonometric series after Riemann	209
2.4.1	From trigonometric series to set theory	209
2.4.2	On the further development of trigonometric series: The arithmetization of functions and their emancipation in functional analysis	211
2.5	A self-contained chapter: Gauss, Riemann, and the Göttingen atmosphere	213
3.	Geometry; Physics; Philosophy	219
	Preliminary remarks: The central role of the habilitation lecture of 1854	219
3.1	Geometry	223
3.1.1	From Euclid to Descartes and to non-Euclidean geometry	223
3.1.2	Gauss' theory of surfaces	226
3.1.3	The n -fold extended manifold	230
3.1.4	The metric determinations	234
3.1.5	Curvature	236
3.1.6	Effects on geometry and physics in the first fifty years after Riemann's death	239
3.1.7	The algorithmic developments	242
3.1.8	The influence of Felix Klein	246
3.1.9	Dedekind: Analytic investigations related to Bernhard Riemann's paper on the hypotheses which lie at the foundations of geometry	252
3.2	Physics	254
3.2.1	The interest in physics	254
3.2.2	Physics as a field theory	257
3.2.3	Mathematical methods for physics	263
3.2.4	Riemann's electrodynamics from the viewpoint of the physicists ..	269
3.2.5	Riemannian geometry in the physics of the twentieth century: Einstein and Weyl	272
3.3	On philosophy	277
3.3.1	Preliminary remarks	277

3.3.2	The spiritual atmosphere in 1853/54: The debate over materialism	279
3.3.3	New mathematical principles of natural philosophy	281
3.3.4	The role of Herbart's philosophy	287
4.	Turning Points in the Conception of Mathematics	293
4.1	The historians' search for revolutions in mathematics	293
4.2	Turning point in the conception of the infinite in mathematics	296
4.3	Turning point in the method: Thinking instead of computing	302
4.4	Turning point in the ontology: Mathematics as thinking in concepts	304
4.4.1	General concepts and the modes of their determination	305
4.4.2	The primacy of the continuous over the discrete in Riemann's mathematics	307
4.4.3	Riemann's concept of a manifold in the philosophical tradition ...	309
4.4.4	Thinking in mathematical concepts before Riemann	311
4.5	The ontology and methodology of mathematics after Riemann ...	313
4.5.1	The primacy of number in the case of Dedekind	313
4.5.2	From arithmetization to axiomatization: Hilbert 1897/1899	318
4.5.3	The role of Georg Cantor	322
4.5.4	The Berlin tradition	325
4.6	Concluding remarks	329
	Bibliography	341
	Name Index	351
