

Contents

Lecture 1	Introduction	1
Lecture 2	Review of Scalars, Vectors, Tensors, and Dyads	5
Lecture 3	Mass Conservation and the Equation of Continuity	19
Lecture 4	The Equation of Motion	25
Lecture 5	Energy Flow	31
Lecture 6	The Electromagnetic Field	35
Lecture 7	Closures	39
Lecture 8	Conservation Laws	43
Lecture 9	Ideal MHD and the Frozen Flux Theorem	49
Lecture 10	Resistivity and Viscosity	55
Lecture 11	Similarity Scaling	65
Lecture 12	The Woltjer Invariants of Ideal MHD, Topological Invariance, Magnetic and Cross-Helicity	71
Lecture 13	Reduced MHD	77
Lecture 14	Equilibrium: General Considerations—The Virial Theorem .	85
Lecture 15	Simple MHD Equilibria	91

Lecture 16	Poloidal Beta, Paramagnetism, and Diamagnetism	99
Lecture 17	“Force-Free” Fields	103
Lecture 18	Toroidal Equilibrium; The Grad–Shafranov Equation	107
Lecture 19	Behavior of Small Displacements in Ideal MHD	121
Lecture 20	Linearized Equations and the Ideal MHD Force Operator . . .	129
Lecture 21	Boundary Conditions for Linearized Ideal MHD	133
Lecture 22	Proof that the Ideal MHD Force Operator is Self-Adjoint. . . .	137
Lecture 23	Waves in a Uniform Medium: Special Cases.	141
Lecture 24	Waves in a Uniform Medium: Arbitrary Angle of Propagation	147
Lecture 25	The Calculus of Variations and the Ideal MHD Energy Principle	153
Lecture 26	Examples of the Application of the Energy Principle	159
Lecture 27	The Rayleigh–Ritz Technique for Estimating Eigenvalues . . .	167
Lecture 28	The Gravitational Interchange Mode or g-Mode	171
Lecture 29	Comments on the Energy Principle and the Minimizing Eigenfunction	179
Lecture 30	Examples of the Application of the Energy Principle to Cylindrical Equilibria	183
Lecture 31	A Very Brief and General Tour of Suydam Analysis for Localized Interchange Instabilities	193
Lecture 32	Magnetic Reconnection	197
Lecture 33	Steady Reconnection: The Sweet–Parker Problem	201
Lecture 34	Resistive Instabilities: The Tearing Mode	205

Lecture 35	Resistive Instabilities: Closing Remarks	213
Lecture 36	Turbulence	219
Lecture 37	MHD Relaxation: Magnetic Self-Organization	241
Lecture 38	Dynamos: Magnetic Field Generation and Maintenance	261
Appendix		283
Fluid Models of Magnetized Plasmas		285
