Preface	vii
1 Vector Algebra I: Scalars and Vectors	1
1.1 Scalars and Vectors	1
1.2 Addition of Vectors	4
1.2.1 Sum of Two Vectors: Geometrical Addition	4
1.3 Subtraction of Vectors	6
1.4 Components and Projection of a Vector	7
1.5 Component Representation in Coordinate Systems	9
1.5.1 Position Vector	9
1.5.2 Unit Vectors	10
1.5.3 Component Representation of a Vector	11
1.5.4 Representation of the Sum of Two Vectors in Terms of Their Components	12
1.5.5 Subtraction of Vectors in Terms of their Components	13
1.6 Multiplication of a Vector by a Scalar	14
1.7 Magnitude of a Vector	15
2 Vector Algebra II: Scalar and Vector Products	23
2.1 Scalar Product	23
2.1.1 Application: Equation of a Line and a Plane	26
2.1.2 Special Cases	26
2.1.3 Commutative and Distributive Laws	27
2.1.4 Scalar Product in Terms of the Components of the Vectors .	27
2.2 Vector Product	30
2.2.1 Torque	30
2.2.2 Torque as a Vector	31
2.2.3 Definition of the Vector Product	32
2.2.4 Special Cases	33
2.2.5 Anti-Commutative Law for Vector Products	33
2.2.6 Components of the Vector Product	34

3	Functions	39
3.1	The Mathematical Concept of Functions and its Meaning in Physics and Engineering	39
3.1.1	Introduction	39
3.1.2	The Concept of a Function	40
3.2	Graphical Representation of Functions	42
3.2.1	Coordinate System, Position Vector	42
3.2.2	The Linear Function: The Straight Line	43
3.2.3	Graph Plotting	44
3.3	Quadratic Equations	47
3.4	Parametric Changes of Functions and Their Graphs	49
3.5	Inverse Functions	50
3.6	Trigonometric or Circular Functions	52
3.6.1	Unit Circle	52
3.6.2	Sine Function	53
3.6.3	Cosine Function	58
3.6.4	Relationships Between the Sine and Cosine Functions	59
3.6.5	Tangent and Cotangent	61
3.6.6	Addition Formulae	62
3.7	Inverse Trigonometric Functions	64
3.8	Function of a Function (Composition)	66
4	Exponential, Logarithmic and Hyperbolic Functions	69
4.1	Powers, Exponential Function	69
4.1.1	Powers	69
4.1.2	Laws of Indices or Exponents	70
4.1.3	Binomial Theorem	71
4.1.4	Exponential Function	71
4.2	Logarithm, Logarithmic Function	74
4.2.1	Logarithm	74
4.2.2	Operations with Logarithms	76
4.2.3	Logarithmic Functions	77
4.3	Hyperbolic Functions and Inverse Hyperbolic Functions	78
4.3.1	Hyperbolic Functions	78
4.3.2	Inverse Hyperbolic Functions	81
5	Differential Calculus	85
5.1	Sequences and Limits	85
5.1.1	The Concept of Sequence	85
5.1.2	Limit of a Sequence	86
5.1.3	Limit of a Function	89
5.1.4	Examples for the Practical Determination of Limits	89
5.2	Continuity	91

5.3	Series	92
5.3.1	Geometric Series	93
5.4	Differentiation of a Function	94
5.4.1	Gradient or Slope of a Line	94
5.4.2	Gradient of an Arbitrary Curve	95
5.4.3	Derivative of a Function	97
5.4.4	Physical Application: Velocity	98
5.4.5	The Differential	99
5.5	Calculating Differential Coefficients	100
5.5.1	Derivatives of Power Functions; Constant Factors	101
5.5.2	Rules for Differentiation	102
5.5.3	Differentiation of Fundamental Functions	106
5.6	Higher Derivatives	112
5.7	Extreme Values and Points of Inflexion; Curve Sketching	113
5.7.1	Maximum and Minimum Values of a Function	113
5.7.2	Further Remarks on Points of Inflexion (Contraflexure) ...	117
5.7.3	Curve Sketching	118
5.8	Applications of Differential Calculus	121
5.8.1	Extreme Values	121
5.8.2	Increments	122
5.8.3	Curvature	123
5.8.4	Determination of Limits by Differentiation: L'Hôpital's Rule	125
5.9	Further Methods for Calculating Differential Coefficients	127
5.9.1	Implicit Functions and their Derivatives	127
5.9.2	Logarithmic Differentiation	128
5.10	Parametric Functions and their Derivatives	129
5.10.1	Parametric Form of an Equation	129
5.10.2	Derivatives of Parametric Functions	133
6	Integral Calculus	145
6.1	The Primitive Function	145
6.1.1	Fundamental Problem of Integral Calculus	145
6.2	The Area Problem: The Definite Integral	147
6.3	Fundamental Theorem of the Differential and Integral Calculus	149
6.4	The Definite Integral	153
6.4.1	Calculation of Definite Integrals from Indefinite Integrals ..	153
6.4.2	Examples of Definite Integrals	156
6.5	Methods of Integration	159
6.5.1	Principle of Verification	159
6.5.2	Standard Integrals	159

6.5.3	Constant Factor and the Sum of Functions	160
6.5.4	Integration by Parts: Product of Two Functions	161
6.5.5	Integration by Substitution	164
6.5.6	Substitution in Particular Cases	166
6.5.7	Integration by Partial Fractions	170
6.6	Rules for Solving Definite Integrals	175
6.7	Mean Value Theorem	178
6.8	Improper Integrals	179
6.9	Line Integrals	181
7	Applications of Integration	191
7.1	Areas	191
7.1.1	Areas for Parametric Functions	194
7.1.2	Areas in Polar Coordinates	195
7.1.3	Areas of Closed Curves	197
7.2	Lengths of Curves	198
7.2.1	Lengths of Curves in Polar Coordinates	201
7.3	Surface Area and Volume of a Solid of Revolution	202
7.4	Applications to Mechanics	208
7.4.1	Basic Concepts of Mechanics	208
7.4.2	Center of Mass and Centroid	208
7.4.3	The Theorems of Pappus	211
7.4.4	Moments of Inertia; Second Moment of Area	213
8	Taylor Series and Power Series	227
8.1	Introduction	227
8.2	Expansion of a Function in a Power Series	228
8.3	Interval of Convergence of Power Series	232
8.4	Approximate Values of Functions	233
8.5	Expansion of a Function $f(x)$ at an Arbitrary Position	235
8.6	Applications of Series	237
8.6.1	Polynomials as Approximations	237
8.6.2	Integration of Functions when Expressed as Power Series	240
8.6.3	Expansion in a Series by Integrating	242
9	Complex Numbers	247
9.1	Definition and Properties of Complex Numbers	247
9.1.1	Imaginary Numbers	247
9.1.2	Complex Numbers	248
9.1.3	Fields of Application	248
9.1.4	Operations with Complex Numbers	249
9.2	Graphical Representation of Complex Numbers	250
9.2.1	Gauss Complex Number Plane: Argand Diagram	250
9.2.2	Polar Form of a Complex Number	251

9.3	Exponential Form of Complex Numbers	254
9.3.1	Euler's Formula	254
9.3.2	Exponential Form of the Sine and Cosine Functions	255
9.3.3	Complex Numbers as Powers	255
9.3.4	Multiplication and Division in Exponential Form	258
9.3.5	Raising to a Power, Exponential Form	259
9.3.6	Periodicity of $re^{j\alpha}$	259
9.3.7	Transformation of a Complex Number From One Form into Another	260
9.4	Operations with Complex Numbers Expressed in Polar Form	261
9.4.1	Multiplication and Division	261
9.4.2	Raising to a Power	263
9.4.3	Roots of a Complex Number	263
10	Differential Equations	273
10.1	Concept and Classification of Differential Equations	273
10.2	Preliminary Remarks	277
10.3	General Solution of First- and Second-Order DEs with Constant Coefficients	279
10.3.1	Homogeneous Linear DE	279
10.3.2	Non-Homogeneous Linear DE	285
10.4	Boundary Value Problems	291
10.4.1	First-Order DEs	291
10.4.2	Second-Order DEs	291
10.5	Some Applications of DEs	293
10.5.1	Radioactive Decay	293
10.5.2	The Harmonic Oscillator	294
10.6	General Linear First-Order DEs	302
10.6.1	Solution by Variation of the Constant	302
10.6.2	A Straightforward Method Involving the Integrating Factor	304
10.7	Some Remarks on General First-Order DEs	306
10.7.1	Bernoulli's Equations	306
10.7.2	Separation of Variables	307
10.7.3	Exact Equations	308
10.7.4	The Integrating Factor – General Case	311
10.8	Simultaneous DEs	313
10.9	Higher-Order DEs Interpreted as Systems of First-Order Simultaneous DEs	317
10.10	Some Advice on Intractable DEs	317
11	Laplace Transforms	321
11.1	Introduction	321
11.2	The Laplace Transform Definition	321
11.3	Laplace Transform of Standard Functions	322

11.4	Solution of Linear DEs with Constant Coefficients	328
11.5	Solution of Simultaneous DEs with Constant Coefficients	330
12	Functions of Several Variables; Partial Differentiation; and Total Differentiation	337
12.1	Introduction	337
12.2	Functions of Several Variables	338
12.2.1	Representing the Surface by Establishing a Table of Z-Values	339
12.2.2	Representing the Surface by Establishing Intersecting Curves	340
12.2.3	Obtaining a Functional Expression for a Given Surface	343
12.3	Partial Differentiation	344
12.3.1	Higher Partial Derivatives	348
12.4	Total Differential	350
12.4.1	Total Differential of Functions	350
12.4.2	Application: Small Tolerances	354
12.4.3	Gradient	356
12.5	Total Derivative	358
12.5.1	Explicit Functions	358
12.5.2	Implicit Functions	360
12.6	Maxima and Minima of Functions of Two or More Variables	361
12.7	Applications: Wave Function and Wave Equation	367
12.7.1	Wave Function	367
12.7.2	Wave Equation	371
13	Multiple Integrals; Coordinate Systems	377
13.1	Multiple Integrals	377
13.2	Multiple Integrals with Constant Limits	379
13.2.1	Decomposition of a Multiple Integral into a Product of Integrals	381
13.3	Multiple Integrals with Variable Limits	382
13.4	Coordinate Systems	386
13.4.1	Polar Coordinates	387
13.4.2	Cylindrical Coordinates	389
13.4.3	Spherical Coordinates	391
13.5	Application: Moments of Inertia of a Solid	395
14	Transformation of Coordinates; Matrices	401
14.1	Introduction	401
14.2	Parallel Shift of Coordinates: Translation	404
14.3	Rotation	407
14.3.1	Rotation in a Plane	407
14.3.2	Successive Rotations	410
14.3.3	Rotations in Three-Dimensional Space	411

14.4	Matrix Algebra	413
14.4.1	Addition and Subtraction of Matrices	415
14.4.2	Multiplication of a Matrix by a Scalar	416
14.4.3	Product of a Matrix and a Vector	416
14.4.4	Multiplication of Two Matrices	417
14.5	Rotations Expressed in Matrix Form	419
14.5.1	Rotation in Two-Dimensional Space	419
14.5.2	Special Rotation in Three-Dimensional Space	420
14.6	Special Matrices	421
14.7	Inverse Matrix	424
15	Sets of Linear Equations; Determinants	429
15.1	Introduction	429
15.2	Sets of Linear Equations	429
15.2.1	Gaussian Elimination: Successive Elimination of Variables	429
15.2.2	Gauss–Jordan Elimination	431
15.2.3	Matrix Notation of Sets of Equations and Determination of the Inverse Matrix	432
15.2.4	Existence of Solutions	435
15.3	Determinants	438
15.3.1	Preliminary Remarks on Determinants	438
15.3.2	Definition and Properties of an n-Row Determinant	439
15.3.3	Rank of a Determinant and Rank of a Matrix	444
15.3.4	Applications of Determinants	445
16	Eigenvalues and Eigenvectors of Real Matrices	451
16.1	Two Case Studies: Eigenvalues of 2×2 Matrices	451
16.2	General Method for Finding Eigenvalues	454
16.3	Worked Example: Eigenvalues of a 3×3 Matrix	456
16.4	Important Facts on Eigenvalues and Eigenvectors	458
17	Vector Analysis: Surface Integrals, Divergence, Curl and Potential ..	461
17.1	Flow of a Vector Field Through a Surface Element	461
17.2	Surface Integral	464
17.3	Special Cases of Surface Integrals	466
17.3.1	Flow of a Homogeneous Vector Field Through a Cuboid ..	466
17.3.2	Flow of a Spherically Symmetrical Field Through a Sphere	468
17.3.3	Application: The Electrical Field of a Point Charge	470
17.4	General Case of Computing Surface Integrals	470
17.5	Divergence of a Vector Field	475
17.6	Gauss’s Theorem	478
17.7	Curl of a Vector Field	480
17.8	Stokes’ Theorem	484

17.9	Potential of a Vector Field	485
17.10	Short Reference on Vector Derivatives	488
18	Fourier Series; Harmonic Analysis	491
18.1	Expansion of a Periodic Function into a Fourier Series	491
18.1.1	Evaluation of the Coefficients	492
18.1.2	Odd and Even Functions	495
18.2	Examples of Fourier Series	496
18.3	Expansion of Functions of Period $2L$	501
18.4	Fourier Spectrum	502
19	Probability Calculus	507
19.1	Introduction	507
19.2	Concept of Probability	508
19.2.1	Random Experiment, Outcome Space and Events	508
19.2.2	The Classical Definition of Probability	509
19.2.3	The Statistical Definition of Probability	509
19.2.4	General Properties of Probabilities	511
19.2.5	Probability of Statistically Independent Events. Compound Probability	513
19.3	Permutations and Combinations	515
19.3.1	Permutations	515
19.3.2	Combinations	516
20	Probability Distributions	519
20.1	Discrete and Continuous Probability Distributions	519
20.1.1	Discrete Probability Distributions	519
20.1.2	Continuous Probability Distributions	522
20.2	Mean Values of Discrete and Continuous Variables	525
20.3	The Normal Distribution as the Limiting Value of the Binomial Distribution	527
20.3.1	Properties of the Normal Distribution	530
20.3.2	Derivation of the Binomial Distribution	532
21	Theory of Errors	537
21.1	Purpose of the Theory of Errors	537
21.2	Mean Value and Variance	538
21.2.1	Mean Value	538
21.2.2	Variance and Standard Deviation	539
21.2.3	Mean Value and Variance in a Random Sample and Parent Population	540
21.3	Mean Value and Variance of Continuous Distributions	542
21.4	Error in Mean Value	544
21.5	Normal Distribution: Distribution of Random Errors	545
21.6	Law of Error Propagation	546

Contents	xix
21.7 Weighted Average	548
21.8 Curve Fitting: Method of Least Squares, Regression Line	549
21.9 Correlation and Correlation Coefficient	552
Answers	557
Index	581
