

## TABLE OF CONTENTS

### Session 1. ASTROPHYSICAL PROBLEMS AND MATHEMATICAL MODELS

|                                                                                      |    |
|--------------------------------------------------------------------------------------|----|
| L. Spitzer, Jr.:<br>Dynamical Evolution of Globular Clusters . . . . .               | 3  |
| J.A. Sellwood:<br>Disc Galaxy Dynamics on the Computer . . . . .                     | 5  |
| D.C. Heggie:<br>Star Cluster Dynamics: Mathematical Models . . . . .                 | 13 |
| T.S. van Albada:<br>Models of Hot Stellar Systems . . . . .                          | 23 |
| G. Efstathiou:<br>Supercomputers and Large Cosmological N-Body Simulations . . . . . | 36 |

### Session 2. SUPER/PARALLEL COMPUTERS

|                                                                                                                                |    |
|--------------------------------------------------------------------------------------------------------------------------------|----|
| R.A. James:<br>Modelling Stellar Dynamical Systems on the CRAY-1S and the CDC Cyber 205 . . . . .                              | 49 |
| C.N. Arnold:<br>Programming the ETA <sup>10</sup> for Large Problems in Stellar Dynamics . . . . .                             | 54 |
| J.L. Gustafson, S. Hawkinson and K. Scott:<br>The Architecture of a Homogeneous Vector Supercomputer . . . . .                 | 62 |
| D.C. Allen:<br>The BBN Multiprocessors: Butterfly and Monarch . . . . .                                                        | 72 |
| D. Hillis:<br>The Connection Machine . . . . .                                                                                 | 84 |
| J.H. Applegate, M.R. Douglas, Y. Gürsel, P. Hunter, C.L. Seitz and G.J. Sussman:<br>A Digital Orrery . . . . .                 | 86 |
| J.H. Applegate, M.R. Douglas, Y. Gürsel, G.J. Sussman and J. Wisdom:<br>The Outer Solar System for 200 Million Years . . . . . | 96 |

### Session 3. CONTRIBUTIONS

|                                                                                                          |     |
|----------------------------------------------------------------------------------------------------------|-----|
| W. Benz:<br>Smooth Particle Hydrodynamics: Theory and Application to the<br>Origin of the Moon . . . . . | 117 |
| R.A. James and T. Weeks:<br>Multiple Mesh Techniques for Modelling Interacting Galaxies . . . . .        | 125 |
| P.J. Quinn, J.K. Salmon and W.H. Zurek:<br>Numerical Experiments on Galactic Halo Formation . . . . .    | 130 |

|                                                                                                                                                                      |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| M. Lecar:<br>Numerical Integration Using Explicit Taylor Series . . . . .                                                                                            | 142 |
| K.L. Chan, W.Y. Chau, C. Jessop and M. Jorgenson:<br>Multiple-Mesh-Particle Scheme for N-Body Simulation . . . . .                                                   | 146 |
| J. Makino:<br>Direct N-Body Simulation on Supercomputers . . . . .                                                                                                   | 151 |
| S.L.W. McMillan:<br>The Vectorization of Small-N Integrators . . . . .                                                                                               | 156 |
| M.J. Duncan:<br>N-Body Integrations Using Supercomputers . . . . .                                                                                                   | 162 |
| R.L. White:<br>A New Numerical Technique for Calculation of Phase Space Evolution<br>of Stellar Systems . . . . .                                                    | 167 |
| J.E. Barnes:<br>An Efficient N-Body Algorithm for a Fine-Grain Parallel Computer . . . . .                                                                           | 175 |
| G.B. Rybicki:<br>A Gridless Fourier Method . . . . .                                                                                                                 | 181 |
| W.H. Press:<br>Techniques and Tricks for N-Body Computation . . . . .                                                                                                | 184 |
| P. Hut and G.J. Sussman:<br>On Toolboxes and Telescopes . . . . .                                                                                                    | 193 |
| <b>POSTER SESSION</b>                                                                                                                                                |     |
| S.J. Aarseth and E. Bettwieser:<br>A Unified N-Body Method . . . . .                                                                                                 | 201 |
| S.J. Aarseth and S. Inagaki:<br>Vectorization of N-Body Codes . . . . .                                                                                              | 203 |
| H. Cohn, M.W. Wise, T.S. Yoon, T.S. Statler, J.P. Ostriker, and P. Hut:<br>Large Scale Calculations of Core Oscillations in Globular Clusters . . . . .              | 206 |
| H. Dejonghe and P. Hut:<br>Round-Off Sensitivity in the N-Body Problem . . . . .                                                                                     | 212 |
| S.Y. Kim, H.M. Lee and K.W. Min:<br>Formation of a Bar Through Cold Collapse of a Stellar System . . . . .                                                           | 219 |
| M.C. Schroeder and N.F. Comins:<br>The Gravitational Interaction Between N-Body (Star Clusters) and<br>Hydrodynamic (ISM) Codes in Disk Galaxy Simulations . . . . . | 223 |
| <b>APPENDIX</b>                                                                                                                                                      |     |
| D.C. Heggie and R.D. Mathieu:<br>Standardised Units and Time Scales . . . . .                                                                                        | 233 |
| <b>LIST OF PARTICIPANTS</b> . . . . .                                                                                                                                | 237 |
