INTRODUCTION

R. J. Patton, P. M. Frank and R. N. Clark	1
1.1 Background and Definitions	1
1.2 Fault Diagnosis Methodology	5
1.3 Summary of Structure and Content of the Book	6

INTEGRATION OF FAULT DETECTION AND DIAGNOSIS METHODS

Rolf Isermann	15
2.1 Introduction	15
2.2 Fault Detection and Fault Diagnosis	16
2.3 Model-Based Fault Detection Methods	18
2.3.1 Fault detection with parameter estimation	19
2.3.2 Fault detection with state-estimation	21
2.3.3 Fault detection with parity equations	25
2.3.4 Fault detection with signal models	26
2.3.5 Change detection and symptom generation	27
2.4 Applicability of Model-Based Fault Detection Methods	28
2.4.1 Assumptions of model-based fault detection	28
2.4.2 Fault modelling	30
2.4.3 Suitability of quantitative model-based fault detection methods	31
2.5 Integration of Different Fault Detection Methods	32
2.6 Fault Diagnosis Methods	33
2.6.1 Symptom representation	33
2.6.2 Heuristic knowledge representation	35
2.6.3 Diagnostic reasoning	38

VIII Table of Contents

Appendix A. Parameter estimation and state estimation for the detection of tool wear and breakage for machine tools	41
Appendix B: Fault diagnosis of a machine tool feed drive with fuzzy reasoning	45

OBSERVABILITY AND REDUNDANCY DECOMPOSITION APPLICATION TO DIAGNOSIS

José Ragot, Didier Maquin and Frédéric Kratz	51
3.1 Introduction	51
3.2 Static Redundancy Equations	53
3.2.1 Presentation	54
3.2.2 Generation of redundancy equations by direct elimination .	55
3.2.3 Generation of redundancy equations by projection	55
3.2.4 The constraint static case	56
3.2.5 A systematic decomposition	58
3.2.6 Example	60
3.3 Dynamic Redundancy Equations	61
3.3.1 Presentation	61
3.3.2 Basis of redundancy generation	62
3.3.3 Direct redundancy (self-redundancy)	62
3.3.4 Redundancy between sensors (inter-redundancy)	64
3.3.5 Direct generation of the redundancy equations	65
3.3.6 Generation of redundancies by reduction of the state equations	68
3.3.7 Generation of redundancies by projection	69
3.3.8 Generation of non-independent redundancy equations	70
3.3.9 Interconnected systems	72
3.3.10 Observability decomposition	73
3.4 Analysis of the Residuals	75
3.4.1 Presentation	76
3.4.2 Residual criterion analysis	79
3.4.3 Imbalances or adjustments using vectors analysis	80
3.4.4 Generalised likelihood ratio approach	81
3.4.5 Parity space approach	82

FAULT DETECTION AND ISOLATION FOR LINEAR SYSTEMS USING DETECTION OBSERVERS

Chongzhi Fang, Wei Ge and Deyun Xiao	87
4.1 Problem Formulation	87
4.1.1 System model with fault modes	87
4.1.2 Fault detection using observers	87
4.2 Detection observers	88
4.2.1 Definition of detection observers	88
4.2.2 Fault detectability	89

4.3	Fault Isolation Logic	91
4.3.1	Fault isolation problem	91
4.3.2	Fault isolation logic	91
4.3.3	The maximum fault isolation information	93
4.3.4	Additional fault isolation logic	97
4.3.5	Solution of fault isolation problem	99
4.4	Detection Observer System Design	100
4.4.1	Detection signals of a detection observer	100
4.4.2	Conditions of existence for sensitivity vectors	101
4.4.3	Solution for detection observer structure conditions	103
4.4.4	Design algorithm for detection observer with given sensitivity	106
4.5	An Example	107

FAULT DETECTION AND ISOLATION FOR DESCRIPTOR SYSTEMS

Ming Hou	115
5.1 Introduction	115
5.2 Problem Formulation	115
5.3 The Existence of Analytical Redundancy	118
5.4 Fault Detectability	120
5.5 Fault Isolability	125
5.6 FDI Observer Design	127
5.7 Illustrative Example	130
5.8 Concluding Remarks	137
5.9 Appendix: Proofs of Theorems	139

ROBUST OBSERVER-BASED FAULT DIAGNOSIS IN NON-LINEAR UNCERTAIN SYSTEMS

Ralf Seliger and Paul M. Frank		145
6.1	Introduction.....	145
6.2	Problem Statement.....	147
6.3	Residual Generation by Non-Linear Unknown Input Observers...	149
6.4	Process Modelling.....	151
6.4.1	Nominal Process Model	152
6.4.2	Fault and Disturbance Modelling	152
6.5	Disturbance Decoupling.....	156
6.5.1	Fault Sensitive Disturbance Decoupling Transformation ...	156
6.5.2	Solution Procedures	157
6.6	Design of Non-Linear Unknown Input Fault Detection Observers .	164
6.6.1	Design by Estimation Error Linearisation	165
6.6.2	Design by Partial Estimation Error Linearisation.....	170
6.6.3	Design by Linearisation about the Estimated State	172
6.7	Robust Residual Evaluation by Threshold Selection	175

X Table of Contents

6.8	A Performance Index	179
6.8.1	Computational Evaluation of the Performance Index	181
6.9	Application Example	183
6.10	Conclusions	185

UNCERTAINTY MODELLING AND ROBUST FAULT DIAGNOSIS FOR DYNAMIC SYSTEMS

Ron J. Patton and Jie Chen		189
7.1	Introduction.....	189
7.2	Brief Details of Robust Fault Diagnosis using Eigenstructure Assignment	190
7.3	Direct Determination and Optimisation of Disturbance Distribution Matrix	193
7.3.1	Noise and additive non-linearity	193
7.3.2	Model reduction	193
7.3.3	Parameter perturbations	194
7.3.4	Low rank approximation of distribution matrix	195
7.3.5	Bounded uncertainty	196
7.4	Estimation of Disturbance and Disturbance Distribution Matrix	197
7.4.1	Estimation of disturbance vector using an augmented observer	198
7.4.2	Estimation of disturbance distribution matrix	199
7.4.3	Estimation of disturbance vector using de-convolution	200
7.5	Optimisation of Distribution Matrix for Varying Operating Point Cases	204
7.6	Modelling and Fault Detection for Jet Engine System.....	205
7.6.1	Application of direct computation and optimisation method	207
7.6.2	Application of augmented observer method	209
7.7	Conclusion	216

RELIABILITY MODELS FOR SENSOR FAULT DETECTION WITH STATE-ESTIMATOR SCHEMES

Dirk van Schrick and Peter C. Müller.....		219
8.1	Introduction.....	219
8.2	Description of IFD-Estimator Schemes.....	221
8.3	Basic Theory of Markov Processes	225
8.4	Modelling of the IFD-Estimator Schemes	229
8.5	Comparison of the IFD-Estimator Schemes	235
8.6	Conclusions	243

A STRUCTURAL FRAMEWORK FOR THE DESIGN OF FDI SYSTEM IN LARGE SCALE INDUSTRIAL PLANTS

M. Staroswiecki, J. P. Cassar and P. Declerck	245
9.1 Introduction	245
9.2 The Model Based Approach For FDI	247
9.2.1 Residual generation using analytical models	249
9.2.2 The limitations of analytical models	251
9.2.3 The structural approach	252
9.3 Structural Model And Canonical Decomposition	253
9.3.1 The structure of the model	253
9.3.2 Direct redundancy relations (Staroswiecki & Declerck, 1990)	256
9.3.3 Deduced redundancy relations (Staroswiecki & Declerck, 1990)	257
9.3.4 Residual generation	266
9.3.5 Matching under causal constraints	266
9.3.6 Related studies	268
9.3.7 Control of the results	268
9.4 Using the Residuals for Fault Detection and Isolation	269
9.4.1 Boolean signature of a fault	270
9.4.2 The FDI procedure	271
9.4.3 Robustness and sensitivity	277
9.5 The Implementation of the FDI Procedure	279
9.5.1 Decomposition of the FDI procedure	280
9.5.2 Distribution of the FDI system and smart instruments	282
9.6 Conclusions	283

STRUCTURED PARITY EQUATIONS IN FAULT DETECTION AND ISOLATION

Janos J. Gertler	285
10.1 Introduction	285
10.2 System Description	287
10.2.1 Nominal (fault-free) system	287
10.2.2 Additive faults and disturbances	289
10.2.3 Multiplicative faults and modelling errors	290
10.3 Parity Equations	293
10.3.1 Parity equations from the input-output model	293
10.3.2 Parity equations from the state-space model	295
10.4 Structuring the Residuals for Additive Faults and Disturbances ..	296
10.4.1 Isolability and disturbance decoupling	297
10.4.2 Designing the equation structure	298
10.4.3 Structured parity equations	301
10.4.4 Structured residuals from the state-equations	305
10.5 Structuring the Residuals for Multiplicative Faults and Modelling Errors	305
10.5.1 Structuring strategies	306

XII Table of Contents

10.5.2 Transformation of the residuals	306
10.5.3 Generating residuals for mixed faults	310
10.6 Conclusion	311

INPUT DESIGN FOR CHANGE DETECTION

Feza Kerestecioğlu and Martin B. Zarrop	315
11.1 Introduction	315
11.2 SPRT and CUSUM Test	317
11.2.1 SPRT	317
11.2.2 CUSUM test	319
11.2.3 Performance measures for the CUSUM test	320
11.3 Input Design Problem	322
11.4 Offline Inputs	323
11.4.1 Problem refinement	323
11.4.2 Power constrained inputs	324
11.5 Online Inputs	330
11.5.1 Problem refinement	330
11.5.2 A suboptimal solution	332
11.6 Simulation Examples	335
11.7 Conclusions	338

ON-LINE DETECTION AND DIAGNOSIS OF SENSOR AND PROCESS FAULTS IN NUCLEAR POWER PLANTS

Johannes Prock	339
12.1 Introduction: Problem Statement	339
12.2 A Three Level Concept for Fault Detection	341
12.2.1 1st level: hardware redundancy	342
12.2.2 2nd level: analytical redundancy	344
12.2.3 3rd level: system redundancy	360
12.3 Diagnostic Problems	365
12.3.1 Diagnostic instability	367
12.3.2 Alarm messages of the three level's modules	368
12.3.3 The use of an expert diagnosis system	369
12.3.4 Hybrid AI-systems ideas	370
12.4 LYDIA - A Sysem for Early Sensor and Process Fault Detection and Diagnosis	371
12.4.1 A first example	372
12.4.2 Application to the primary and secondary side of a pressurised water reactor	375
12.5 Conclusions	376

APPLICATION OF SENSOR FAULT CLASSIFICATION ALGORITHMS TO A BENSON STEAM BOILER

Kristian Kroschel and Andreas Wernz	379
13.1 Introduction	379
13.2 Scheme and Model of the Steam Generator	382
13.2.1 Assumptions about the estimation error signals	384
13.3 Basic Instrument Fault Diagnosis Scheme	385
13.3.1 Detection of a sensor fault	385
13.3.2 Estimation and classification of a sensor fault	387
13.3.3 Experimental results	390
13.4 Suppression of Modelling Errors	391
13.4.1 De-correlation method	392
13.4.2 Implementation of the de-correlation filters	396
13.4.3 Results	397
13.5 Identification of Process Parameters	397
13.5.1 Bank of state-augmented Kalman filters	400
13.5.2 Design of the Kalman filters	401
13.5.3 Computation of the <i>a posteriori</i> probabilities	404
13.5.4 Figures of merit for detectability and separability	404
13.5.5 Tuning of the Kalman filters	405
13.5.6 Results	406
13.6 Conclusions	410

DETECTION OF EVENTS IN SIGNALS VIA THE MODEL-BASED FAULT DIAGNOSIS APPROACH: APPLICATION TO BIO-ELECTRICAL SIGNALS

Dominique Sauter, Thierry Cecchin and David Brie	413
14.1 Introduction	413
14.2 Theoretical Background	414
14.2.1 Problem formulation	414
14.2.2 Residual generation	416
14.2.3 Residual evaluation	419
14.2.4 Robustness considerations	421
14.3 Bio-Electrical Signal Processing	425
14.3.1 Separation of fast and slow phases of eye tracking movement	425
14.3.2 Rejection of artefacts for EEG spectral analysis	427
14.3.3 Extraction of spindles in sleep EEG for spectral analysis ..	430
14.4 Conclusions	433

A STUDY ON FAULT-TOLERANT INTEGRATED NAVIGATION SYSTEMS

Hong-Yue Zhang, Han-Guo Zhang, Jie Chen, Ron J. Patton and Bruce K. Walker	435
15.1 Introduction	435

XIV Table of Contents

15.2	Fault Tolerance for a Redundant Sensor Configuration	437
15.2.1	Redundant sensor systems	437
15.2.2	Direct comparison of the measurements	439
15.2.3	Generalised likelihood test (GLT)	441
15.3	Combining Algorithm for Decentralised Estimation	447
15.4	Fault Detection and Isolation for Subsystems	452
15.4.1	χ^2 test	452
15.4.2	Residual test	454
15.5	Application and Simulation Results	455
15.6	Conclusions	460

A HIERARICAL STRUCTURE FOR ON-LINE PROCESS FAULT DIAGNOSIS BASED ON DEEP QUALITATIVE MODELLING

Jie Zhang and Peter D. Roberts	461
16.1 Introduction	461
16.2 Qualitative Modelling	463
16.2.1 Qualitative modelling based on confluences	463
16.2.2 Order of magnitude reasoning	464
16.3 A Hierarchical Structure for On-Line Process Fault Diagnosis	466
16.3.1 The lower level diagnosis system	466
16.3.2 The upper level diagnosis system	468
16.4 Application to a Pilot Scale Mixing Process	472
16.4.1 The mixing process	472
16.4.2 Qualitative modelling of the mixing process	472
16.4.3 Fault detection and diagnosis	475
16.4.4 A case study	479
16.4.5 Performance of the hierarchical fault diagnosis system	480
16.5 Conclusions	481

FAULT DIAGNOSIS BASED ON A PREDICATE LOGIC DESCRIPTION OF DYNAMICAL SYSTEMS

Jan Lunze and Frank Schiller	485
17.1 Introduction	485
17.1.1 The Rationale for Qualitative Diagnosis	485
17.1.2 Outline of the proposed diagnostic method	488
17.2 Qualitative Modelling	490
17.2.1 Qualitative vs quantitative modelling	490
17.2.2 Qualitative description of signals	491
17.2.3 Description of the perturbed steady state by propositional logic formulae	494
17.2.4 Description of the perturbed dynamical behaviour by predicate logic formulae	496
17.2.5 Causality graph and aggregated causality graph	498

17.3	The Diagnostic Problem	500
17.4	Diagnosis Based on a Propositional Logic	
	Description of the System	500
	17.4.1 Solution by a resolution refutation system	501
	17.4.2 Solution by deduction	501
	17.4.3 Reduction of the search space of the deduction system	503
	17.4.4 The structure of the diagnostic algorithm	505
17.5	Solution Based on a Predicate Logic Description	506
17.6	Example – a Tank System	509
17.7	Conclusions	514

MONITORING AND DIAGNOSIS OF FERMENTATION PROCESSES

Kouamana Bousson, Jean-Philippe Steyer, Boutaib Dahhou and Louise Travé-Massuyès		517
18.1	Introduction	517
18.2	Fermentation Processes	519
	18.2.1 General features	519
	18.2.2 Case study	523
18.3	The BIOTECH System	524
	18.3.1 Detection of sensor malfunction	525
	18.3.2 Signal interpretation	525
	18.3.3 Causal qualitative model	527
	18.3.4 Generating influence tables	530
18.4	CA-EN: A Model-Based Reasoning Module	533
	18.4.1 Introduction	535
	18.4.2 Modelling formalism	535
	18.4.3 Prediction and interpretation algorithms	540
	18.4.4 Interpretations and supervisory control	542
	18.4.5 Application to the fed-batch fermentation process	543
18.5	Conclusions	545

PROCESS MONITORING AND FAULT DETECTION USING MULTIVARIATE SPC

E.B. Martin and A.J. Morris		547
19.1	Introduction	547
19.2	Process Monitoring and Process Control	549
19.3	Multivariate Statistical Methods	550
	19.3.1 Principal Components Analysis (PCA)	550
	19.3.2 Projection to Latent Structures	551
19.4	Multivariate Statistical Process Control	553
	19.4.1 The Squared Prediction Error Plot	553
	19.4.2 Confidence Bounds	554
	19.4.3 Interpreting the 'Out of Control' Signal	555

XVI Table of Contents

19.5 Polymer Process Monitoring and Fault Detection 555

19.6 Batch Processes 559

 19.6.1 Multi-way Principal Component Analysis 561

 19.6.2 An example of Process Performance Monitoring
 of a Batch Process 562

19.7 Conclusions 564
