

CONTENTS

CHAPTER I. Prerequisites

A) Recursive Functions.....	2
B) Formal Theories.....	3
C) Arithmetization.....	4
D) Syntactical Models.....	6
E) Zermelo-Fraenkel Set Theory.....	10
F) The Principle of Reflection.....	14

CHAPTER II. Constructible Sets

A) The Axiom of Choice and the Continuum Hypothesis.....	23
B) The Construction of the model.....	25
C) Σ_1^{ZF} - Formulae.....	30
D) Σ_1^{ZF} - definability of syntactical notions.....	32
E) Δ_1^{ZF} - definability of semantic notions.....	33
F) Σ_1^{ZF} - definability of the constructible model.....	34
G) Properties of the class L of constructible sets.....	35
H) Theorem of H.Putnam and a Lemma of G.Kreisel.....	39
I) Theorem of J.R.Shoenfield.....	41
J) Remarks.....	43
Additions to chapters I and II.....	45

CHAPTER III. Fraenkel-Mostowski-Specker Models

A) The Independence of the Axiom of Foundation.....	47
B) The Fraenkel-Mostowski-Specker Method.....	52
C) The Independence of the Axiom of Choice.....	57
D) The Independence of the generalized Continuum-Hypothesis from the Aleph-Hypothesis.....	59
E) The Independence of the Axiom of Choice (AC) from Kurepa's Anti-Chain Principle.....	61
F) The Undefinability of Cardinality in ZF^0	67
G) A Final Word.....	73
Additions to chapter III.....	75

CHAPTER IV. Cohen Extensions of ZF-Models

Introduction.....	76
A) The Forcing Relation in a general setting.....	78
(Ramified languages, strong and weak forcing, complete sequences)	
B) Cohen-generic sets.....	88

VI

(Definitions of val_R and the extension $\mathcal{N}_R$, Hauptsatz of the forcing technique: $\mathcal{N}_R \models \text{ZF}$, Digression).	
C) The Axiom of Choice in generic extensions.....	96
($\mathcal{M}[a] \models \text{ZF} + (\text{AC})$, Symmetry properties, the Independence of the countable axiom of choice (AC^ω) from ZF).	
D) The Power of the Continuum in generic extensions.....	103
(Independence of the Continuum-hypothesis from (AC) , independence of $V = L$ from $(\text{AC}) + (\text{GCH})$).	
E) The Independence of the Boolean Prime Ideal theorem (BPI) from the Ordering Principle.....	110
(Equivalents of the (BPI), the Order Extension Principle, Historical retrospect: Mostowski's model, homogeneous universal relational systems, the independence of the Orderextension principle from the Ordering principle).	
F) The Kinna-Wagner Choice Principle.....	122
(Formulation of that principle (KW-AC), Proof for $\text{ZF} \vdash (\text{KW-AC}) \rightarrow \text{Ordering principle}$, independence of (AC) from (KW-AC) , independence of (KW-AC) from the Ordering principle).	
G) The Independence of the Axiom of Choice (AC) from the Boolean Prime Ideal theorem (BPI).....	128
(Outline of a proof that (BPI) holds in Mostowski's model, Construction of the generic model $\mathcal{M}[a_0, a_1, \dots, A]$ and proof that $(\text{BPI}) + \neg (\text{AC})$ hold in that model, Application: definitions of continuity).	
H) The Axiom of Dependent Choices.....	146
(Bernays' and Lévy's formulation of that axiom, proof for $(\forall \alpha)(\text{AC}^\alpha) \rightarrow (\text{DC}^\omega)$ and for $(\forall \alpha)(\text{DC}^\alpha) \rightarrow (\text{AC})$; Independence results: Mostowski's model of $\text{ZF}^0 + (\text{DC}^\omega) + \neg (\text{AC}^{\omega_1})$, Jensen's model of $\text{ZF} + (\text{AC}^\omega) + \neg (\text{DC}^\omega)$, Feferman's model $\mathcal{M}[a_0, a_1, \dots]$ for $\text{ZF} + (\text{DC}^\omega) + \neg (\text{BPI})$, List of further results).	
I) A FINAL WORD.....	167
