|                                                                                                                       |     |
|-----------------------------------------------------------------------------------------------------------------------|-----|
| The Development of Z<br><i>S. Brien</i> .....                                                                         | 1   |
| An Overview of the Development of COLD<br><i>L.M.G. Feijs</i> .....                                                   | 15  |
| The Formal Basis for the RAISE Specification Language<br><i>R. Milne</i> .....                                        | 23  |
| The Static Part of the Design Language COLD-K<br><i>G.R. Renardel de Lavalette</i> .....                              | 51  |
| Generation of Proof Obligations for Type Consistency<br>(Extended Abstract)<br><i>F.M. Damm and B.S. Hansen</i> ..... | 83  |
| Experiences in Developing a Proof Theory for VDM<br>Specifications<br><i>J.S. Fitzgerald and R. Moore</i> .....       | 101 |
| Towards Proof Rules for Looseness in Explicit Definitions from<br>VDM-SL<br><i>P.G. Larsen</i> .....                  | 118 |
| Loose Real-Time Communicating Agents<br><i>H. Toetenel</i> .....                                                      | 135 |
| A Timed Specification Language for Concurrent Reactive<br>Systems<br><i>M. Schenke</i> .....                          | 152 |
| Multiparadigm Specification Languages: A First Attempt at<br>Foundations<br><i>E. Astesiano and M. Cerioli</i> .....  | 168 |
| The Semantics of Extended ML: A Gentle Introduction<br><i>S. Kahrs, D. Sannella and A. Tarlecki</i> .....             | 186 |
| Type-Checking Revisited: Modular Error-Handling<br><i>T.B. Dinesh</i> .....                                           | 216 |
| Proof Theory for $\mu$ CRL: A Language for Processes with Data<br><i>J.F. Groote and A. Ponse</i> .....               | 232 |

|                                                                                                                                                                       |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Case Study: Stepwise Development of a Communication Processor Using Trace Logic<br><i>S. Kleuker</i> .....                                                            | 252 |
| <i>Rendez-vous</i> with Bundle Event Structures<br><i>B. Botma</i> .....                                                                                              | 270 |
| Syntactic Action Refinement in Presence of Multiway Synchronization<br><i>D.-E. Saïdouni and J.-P. Courtiat</i> .....                                                 | 289 |
| From Implicit via Inductive to Explicit Definitions<br><i>G.R. Renardel de Lavalette</i> .....                                                                        | 304 |
| Verifying Process Algebra Proofs in Type Theory<br><i>M.P.A. Sellink</i> .....                                                                                        | 315 |
| Reasoning About Dynamic Features in Specification Languages—<br>A Modal View on Creation and Modification<br><i>R. Groenboom and G.R. Renardel de Lavalette</i> ..... | 340 |
| <b>Author Index</b> .....                                                                                                                                             | 357 |
