List of Contributors XXIII

1 Introduction 1

Hans-Joachim Streitberger

1.1 Historic Development 1

1.2 Legislation 7

1.3 Automotive and Automotive Paint Market 9

2 Materials and Concepts in Body Construction 13

Klaus Werner Thomer

2.1 Introduction 13

2.2 Methods of Body Construction 15

2.2.1 Monocoque Design 15

2.2.2 Space Frame 18

2.2.3 Hybrid Type of Construction 19

2.2.4 Modular Way of Construction 19

2.3 Principles of Design 20

2.3.1 Conventional Design 20

2.3.2 Design Under Consideration of Light-Weight Construction 22

2.3.3 Bionics 23

2.4 Materials 26

2.4.1 Steel 26

2.4.1.1 General Remarks 26

2.4.1.2 Low-Carbon Deep Drawing Steels 29

2.4.1.3 Higher-Strength Steels 29

2.4.1.4 High-Strength Steels 31

2.4.1.5 High-Grade (Stainless) Steels 32

2.4.1.6 Manganese–Boron Steels 32

2.4.1.7 Light-Construction Steel with Induced Plasticity (TWIP Steel) 33

2.4.2 Aluminum 34

2.4.2.1	General Remark	34
2.4.2.2	Further Treatment	35
2.4.2.3	Aluminum Alloys	38
2.4.2.4	Aluminum as Light-Weight Construction Material	39
2.4.3	Magnesium	40
2.4.4	Titanium	42
2.4.5	Nonmetallic Parts – Fiber Composites	43
2.5	Manufacturing Methods	47
2.5.1	Tailored Products	47
2.5.1.1	General Remarks	47
2.5.1.2	Tailored Blanks	47
2.5.1.3	Tailored Tubes	48
2.5.1.4	Tailored Strips	48
2.5.1.5	Patchwork Blanks	48
2.5.1.6	Future	49
2.5.2	Hydroforming	49
2.5.3	Press Hardening	50
2.5.4	Metal Foam	50
2.5.5	Sandwich Structures	51
2.5.6	Roll Forming to Shape	52
2.6	Joining Methods	52
2.6.1	Bonding	53
2.6.2	Laser Welding	54
2.6.3	Others	55
2.6.3.1	Clinching	55
2.6.3.2	Riveting	56
2.6.3.3	Roller Hemming	56
2.7	Outlook	57
2.8	Surface Protection	59
2.8.1	Precoating of Sheets	59
2.8.2	Corrosion Prevention in the Design Phase	59

3 Pretreatment of Multimetal Car Bodies 61

Horst Gehmecker

3.1	Introduction	61
3.2	Car Body Construction Materials	61
3.2.1	Sheet Materials	61
3.2.2	Surface Conditions/Contaminations	63
3.3	Pretreatment Process	65
3.3.1	Sequence of Treatment	65
3.3.2	Degreasing	65
3.3.3	Activation	69
3.3.4	Zinc Phosphating	70
3.3.5	Passivation	75
3.3.6	Pretreatment of Aluminum – Steel Structures	75

3.3.7	Pretreatment of Magnesium	76
3.3.8	Pretreatment of Plastic Parts	77
3.4	Car Body Pretreatment Lines	77
3.4.1	Spray Lines	80
3.4.2	Continuous Horizontal Spray/Dip Line	80
3.4.3	RoDip3 Line	80
3.4.4	Vario Shuttle Line	81
3.4.5	Other Types of Lines	82
3.4.6	Construction Materials	82
3.4.7	Details on Process Stages	82
3.4.7.1	Precleaning Stage	82
3.4.7.2	Spray degrease	83
3.4.7.3	Dip Degrease	83
3.4.7.4	Rinsing	84
3.4.7.5	Activation	84
3.4.7.6	Phosphating	84
3.4.7.7	Rinsing	85
3.4.7.8	Passivation	85
3.4.7.9	Deionized water rinsing	85
3.4.7.10	Entering the Electrocoat Line	85
3.5	Properties and Specifications of Zinc Phosphate Conversion Layers	85
3.6	Environmental Legislations	86
3.7	Outlook	86
4	Electrodeposition Coatings	89
	<i>Hans-Joachim Streitberger</i>	
4.1	History and Introduction	89
4.2	Physico-chemical Basics of the Deposition Process	90
4.3	Data for Quality Control	95
4.3.1	Voltage, Current Density, Bath Temperature, and Bath Conductivity	96
4.3.2	Wet Film Conductivity	96
4.3.3	Solid Content, Solvent Content, and pH	97
4.4	Resins and Formulation Principles	98
4.4.1	General Remarks	98
4.4.2	Anodic Electrodeposition Paints	99
4.4.3	Cathodic Electrodeposition Paints	99
4.5	Film Performance of Cathodic Electrocoatings	101
4.5.1	Physical Film Data	101
4.5.2	Corrosion Protection	102
4.5.3	Chip Resistance	104
4.5.4	Surface Smoothness and Appearance	105
4.6	Design of Cathodic Electrocoating Lines	106
4.6.1	Integration into the Coating Process of Cars and Trucks	106
4.6.2	Pretreatment	107

4.6.3	General Functions and Equipment of an Electrocoat Line	107
4.6.4	Tanks, Filters, Heat Exchanger, and Power Supply	108
4.6.5	Replenishment and Anode Cells	111
4.6.6	Ultrafiltration and Rinsing Zones	114
4.6.7	Baking Oven	118
4.7	Defects During Application and their Prevention	119
4.7.1	Dirt	119
4.7.2	Craters	120
4.7.3	Surface Roughness	121
4.7.4	Film Thickness/Throwing Power	122
4.7.5	Other Defects	123
4.8	Electrocoating and Similar Processes Used in Automotive Supply Industry	124
4.9	Outlook	125
5	Primer Surfer	129
	<i>Heinrich Wonnemann</i>	
5.1	Introduction	129
5.2	Requirement Profile	132
5.2.1	Legislative Requirement	132
5.2.2	Technological Requirements	133
5.2.2.1	Film Properties	133
5.2.2.2	Product Specifications	136
5.2.2.3	Application	136
5.3	Raw Materials	138
5.3.1	Resin Components	139
5.3.2	Pigments and Extenders	141
5.3.2.1	Titanium Dioxide	143
5.3.2.2	Barium Sulfate	144
5.3.2.3	Talc	144
5.3.2.4	Silicon Dioxide	145
5.3.2.5	Feldspar	146
5.3.2.6	Carbon Blacks	146
5.3.3	Additives	146
5.3.3.1	Pigment Wetting and Dispersion Additives	148
5.3.3.2	Defoaming and Deaerating Agents	148
5.3.3.3	Surfactants and Additives for Substrate Wetting	149
5.3.3.4	Rheology Additives	149
5.3.4	Solvents	150
5.3.4.1	Aromatic Hydrocarbons: Diluents/Thinners	151
5.3.4.2	Alcohols, Cellosolves, and Esters: Solvents	151
5.3.4.3	Tetralin or Pine Oil: Very High Boiling Additive Diluents	152

5.4	Liquid Primers	152
5.4.1	Formula Principles	152
5.4.1.1	Application	152
5.4.1.2	Rheology	153
5.4.2	Manufacturing Process	156
5.4.3	Application	158
5.5	Powder Primer Surfacers	160
5.5.1	Formula Principles	160
5.5.2	Manufacturing Process	162
5.5.3	Application	166
5.6	Process Sequence	170
5.7	Summary and Future Outlook	171
6	Top Coats	175
	<i>Karl-Friedrich Dössel</i>	
6.1	Introduction	175
6.2	Pigments and Color	175
6.3	Single-Stage Top Coats (Monocoats)	180
6.4	Base Coats	181
6.4.1	Base Coat Rheology	184
6.4.2	Low and Medium Solids Base Coat	185
6.4.3	High Solids (HS) Base Coats	186
6.4.4	Waterborne Base Coats	186
6.4.5	Global Conversion to Waterborne Base Coat Technology	187
6.4.6	Drying of Base Coats	189
6.5	Clear Coat	189
6.5.1	Market	189
6.5.2	Liquid Clear Coats	190
6.5.2.1	One-Component (1K) Acrylic Melamine Clear Coat	190
6.5.2.2	Acrylic Melamine Silane	192
6.5.2.3	Carbamate-Melamine-Based 1K Clear coat	192
6.5.2.4	One-Component Polyurethane (PUR) Clear Coat	192
6.5.2.5	One- (and Two-) Component Epoxy Acid Clear Coat	192
6.5.2.6	Two-Component (2K) Polyurethane Clear Coat	193
6.5.2.7	Waterborne Clear Coat	194
6.5.3	Powder Clear Coat	195
6.5.4	Top Coat Performance	198
6.5.4.1	Environmental Etch	198
6.5.4.2	UV Durability of Clear Coats	199
6.5.4.3	Scratch Resistant Clear Coats	201
6.5.4.4	Application Properties	204
6.5.5	Future Developments: UV Curing	206

6.6	Integrated Paint Processes (IPP) for Top Coat Application	208
6.6.1	Wet-On-Wet-On-Wet Application (3 Coat 1 Bake) of Primer Surfacer–Base Coat–Clear Coat	208
6.6.2	Primerless Coating Process	209
7	Polymeric Engineering for Automotive Coating Applications	211
	<i>Heinz-Peter Rink</i>	
7.1	General Introduction	211
7.2	Polyacrylic Resins for Coating Materials in the Automotive Industry	214
7.2.1	Managing the Property Profile of the Polyacrylic Resins	214
7.2.2	Manufacturing Polyacrylic Resins	218
7.2.2.1	Manufacturing Polyacrylic Resins by Means of Solution Polymerization	218
7.2.2.2	Polymerization in an Aqueous Environment	222
7.2.2.3	Mass Polymerization	224
7.3	Polyester for Coating Materials for the Automotive Industry	224
7.3.1	Managing the Property Profile of Polyesters	224
7.3.2	Manufacturing Polyesters	228
7.4	Polyurethane Dispersions in Coating Materials for the Automotive Industry	231
7.4.1	Managing the Property Profile of Polyurethane Resins and Polyurethane Resin Dispersions	232
7.4.2	Manufacturing Polyurethane Resin Dispersions	234
7.5	Polyurethane Polyacrylic Polymers in Coating Materials for the Automotive Industry	238
7.5.1	Introduction	238
7.5.2	Managing the Property Profile of Polyurethane Polyacrylic Polymers	239
7.5.3	Manufacturing Polyurethane Polyacrylic Polymers	240
7.6	Epoxy Resins	241
7.6.1	Managing the Property Profile	242
7.6.2	Manufacturing Polyepoxy Resins	243
7.7	Cross-Linking Agents and Network-Forming Resins	244
7.7.1	Introduction	244
7.7.2	Cross-Linking Agents for Liquid Coating Materials	245
7.7.2.1	Melamine and Benzoguanamine Resins	245
7.7.2.2	Tris(Alkoxy-carbonylamino)-1,3,5-Triazine	248
7.7.2.3	Polyisocyanates and Blocked Polyisocyanates	249
7.7.2.4	Other Cross-Linking Agents for Liquid Coating Materials	252
7.7.3	Cross-Linking Agents for Powder Coatings in the Automotive Industry	252

8	Paint Shop Design and Quality Concepts	259
	<i>Pavel Svejda</i>	
8.1	Introduction	259
8.2	Coating Process Steps	260
8.2.1	Pretreatment	261
8.2.2	Electrocoating (EC)	261
8.2.3	Sealing and Underbody Protection	262
8.2.4	Paint Application	263
8.2.4.1	Function Layer and Primerless Processes	263
8.2.4.2	Powder	264
8.2.5	Cavity Preservation	265
8.3	General Layout	266
8.4	Coating Facilities	268
8.4.1	Process Technology	268
8.4.2	Automation in the Paint Application	269
8.4.2.1	Painting Robot	270
8.4.3	Application Technology	271
8.4.3.1	Atomizer	272
8.4.3.2	Paint Color Changer	275
8.4.3.3	Paint Dosing Technology for Liquid Paints	277
8.4.3.4	Paint Dosing Technology for Powder Paints	278
8.4.4	Paint-Material Supply	279
8.4.4.1	Paint Supply Systems for the Industrial Sector	280
8.4.4.2	Paint Mix Room	280
8.4.4.3	Container Group	280
8.4.4.4	Circulation Line System	282
8.4.4.5	Basic Principles for the Design of the Pipe Width for Circulation Lines	282
8.4.4.6	Paint Supply Systems for Small Consumption Quantities and Frequent Color Change	283
8.4.4.7	Small Circulation Systems	283
8.4.4.8	Supply Systems for Special Colors	284
8.4.4.9	Voltage Block Systems	285
8.4.4.10	Voltage Block Systems with Color-Change Possibility	285
8.4.4.11	Installations for the High Viscosity Material Supply	286
8.4.5	Conveyor Equipment	287
8.5	Paint Drying	288
8.6	Quality Aspects	290
8.6.1	Control Technology	290
8.6.1.1	Process Monitoring and Regulation	292
8.6.2	Automated Quality Assurance	293
8.6.2.1	Process Optimization in Automatic Painting Installations	296

8.7	Economic Aspects	298
8.7.1	Overall Layout	298
8.7.2	Full Automation in Vehicle Painting	298
8.7.3	Exterior Application of Metallic Base Coats with 100% ESTA High-Speed Rotation	300
8.7.4	Robot Interior Painting with High-Speed Rotation	301
9	Coatings for Plastic Parts	305
9.1	Exterior Plastics	305
	<i>Guido Wilke</i>	
9.1.1	Introduction	305
9.1.1.1	Ecological Aspects	305
9.1.1.2	Technical and Design Aspects	306
9.1.1.3	Economical Aspects	307
9.1.2	Process Definitions	307
9.1.2.1	Offline, Inline, and Online Painting	307
9.1.2.2	Process-Related Issues, Advantages, and Disadvantages	307
9.1.3	Exterior Plastic Substrates and Parts	310
9.1.3.1	Overview	310
9.1.3.2	Basic Physical Characteristics	311
9.1.3.3	Part Processing and Influence on Coating Performance	315
9.1.4	Pretreatment	315
9.1.5	Plastic-Coating Materials	318
9.1.5.1	Basic Technical Principles of Raw-Material Selection	318
9.1.5.2	Car-Body Color	320
9.1.5.3	Contrast Color and Clear Coat on Plastic Systems	324
9.1.6	Technical Demands and Testing	324
9.1.6.1	Basic Considerations	324
9.1.6.2	Key Characteristics and Test Methods	325
9.1.7	Trends, Challenges, and Limitations	329
9.1.7.1	Substrates and Parts	329
9.1.7.2	Paint Materials	330
9.1.7.3	Processes	332
9.2	Interior Plastics	334
	<i>Stefan Jacob</i>	
9.2.1	Introduction: the 'Interior' Concept	334
9.2.2	Surfaces and Effects	335
9.2.3	Laser Coatings	337
9.2.3.1	Substrate Requirements	339
9.2.3.2	Requirements to Be Fulfilled by the Paint Systems and Coating	339
9.2.3.3	Demands Expected by the Inscription Technique	340
9.2.4	Performances of Interior Coatings	341
9.2.4.1	Mechanical and Technological Demands	341
9.2.4.2	Substrates and Mechanical Adhesion	342
9.2.4.3	Ecological and Economical Requirements	343

- 9.2.4.4 Equipment for the Application of Interior Paint Systems 344
- 9.2.5 Raw-Material Basis of Interior Paints 346
- 9.2.6 Summary/Outlook 347

10 Adhesive Bonding – a Universal Joining Technology 351

Peter W. Merz, Bernd Burchardt and Dobrivoje Jovanovic

- 10.1 Introduction 351
- 10.2 Fundamentals 351
 - 10.2.1 Basic Principles of Bonding and Material Performances 351
 - 10.2.1.1 Types of Adhesives 351
 - 10.2.1.2 Adhesives are Process Materials 355
 - 10.2.1.3 Advantages of Bonding 356
 - 10.2.1.4 Application 359
 - 10.2.2 Surface Preparation 359
 - 10.2.2.1 Substrates 361
 - 10.2.2.2 Adhesion 361
 - 10.2.2.3 Durability and Aging of Bonded System 362
- 10.3 Bonding in Car Production 366
 - 10.3.1 Body Shop Bonding 367
 - 10.3.1.1 Antiflutter Adhesives 367
 - 10.3.1.2 Hem-Flange Bonding 368
 - 10.3.1.3 Spot-Weld Bonding 369
 - 10.3.1.4 Crash-Resistant Adhesives/Bonding 369
 - 10.3.2 Paint Shop 370
 - 10.3.3 Trim Shop 371
 - 10.3.3.1 Special Aspects of Structural Bonding in the Trim Shop 371
 - 10.3.3.2 'Direct Glazing' 371
 - 10.3.3.3 Modular Design 372
 - 10.3.3.4 Other Trim Part Bondings 372
- 10.4 Summary 374

11 In-plant Repairs 377

Karl-Friedrich Dössel

- 11.1 Repair After Pretreatment and Electrocoat Application 377
- 11.2 Repair After the Primer Surfacer Process 378
- 11.3 Top-Coat Repairs 378
- 11.4 End-of-Line Repairs 380

12 Specifications and Testing 381

- 12.1 Color and Appearance 381

Gabi Kiegle-Böckler

 - 12.1.1 Visual Evaluation of Appearance 381
 - 12.1.1.1 Specular Gloss Measurement 382
 - 12.1.1.2 Visual Evaluation of Distinctness-of-Image (DOI) 385
 - 12.1.1.3 Measurement of Distinctness-of-Image 385

12.1.1.4	Visual Evaluation of 'Orange Peel'	386
12.1.1.5	Instrumental Measurement of Waviness (Orange Peel)	388
12.1.1.6	The Structure Spectrum and its Visual Impressions	390
12.1.1.7	Outlook of Appearance Measurement Techniques	392
12.1.2	Visual Evaluation of Color	393
12.1.2.1	Solid Colors	393
12.1.2.2	Metallic and Interference Colors	397
12.1.2.3	Color Measurement of Solid Colors	398
12.1.2.4	Color Measurement of Metallic and Interference Coatings	401
12.1.2.5	Typical Applications of Color Control in the Automotive Industry	402
12.1.2.6	Color Measurement Outlook	403
12.2	Weathering Resistance of Automotive Coatings	405
	<i>Gerhard Pausch and Jörg Schwarz</i>	
12.2.1	Introduction	405
12.2.2	Environmental Impact on Coatings	406
12.2.2.1	Natural Weathering	408
12.2.2.2	Artificial Weathering	414
12.2.2.3	New Developments	421
12.2.3	Standards for Conducting and Evaluating Weathering Tests	423
12.2.4	Correlation Between Artificial and Natural Weathering Results	426
12.3	Corrosion Protection	427
	<i>Hans-Joachim Streitberger</i>	
12.3.1	Introduction	427
12.3.2	General Tests for Surface Protection	429
12.3.3	Special Tests for Edge Protection, Contact Corrosion, and Inner Part Protection	432
12.3.4	Total Body Testing in Proving Grounds	433
12.4	Mechanical Properties	434
	<i>Gerhard Wagner</i>	
12.4.1	General Remarks	434
12.4.2	Hardness	435
12.4.2.1	Pendulum Damping	435
12.4.2.2	Indentation Hardness	436
12.4.2.3	Scratch Hardness	439
12.4.3	Adhesion and Flexibility	441
12.4.3.1	Pull-Off Testing	441
12.4.3.2	Cross Cut	441
12.4.3.3	Steam Jet	444
12.4.3.4	Bending	445
12.4.3.5	Cupping	446
12.4.3.6	Impact Testing by Falling Weight	448
12.4.4	Stone-Chip Resistance	449
12.4.4.1	Standardized Multi-Impact Test Methods	450
12.4.4.2	Single-Impact Test Methods	451
12.4.5	Abrasion	454

12.4.5.1	Taber Abraser	454
12.4.5.2	Abrasion Test by Falling Abrasive Sand	455
12.4.6	Scratch Resistance	456
12.4.6.1	Crockmeter Test	456
12.4.6.2	Wet-Scrub Abrasion Test	457
12.4.6.3	Simulation of Car Wash	458
12.4.6.4	Nanoscratch Test	460
12.4.7	Bibliography, Standards	462
13	Supply Concepts	467
	<i>Hans-Joachim Streitberger and Karl-Friedrich Dössel</i>	
13.1	Quality Assurance (QA)	467
13.2	Supply Chain	468
13.2.1	Basic Concepts and Realizations	468
13.2.2	Requirements and Limitations of a System Supply Concept	473
14	Outlook	475
	<i>Hans-Joachim Streitberger and Karl-Friedrich Dössel</i>	
14.1	Status and Public Awareness of the Automotive Coating Process	475
14.2	Regulatory Trends	476
14.3	Customer Expectations	478
14.4	Innovative Equipments and Processes	479
14.5	New Business Ideas	481
	Index	483
