

Contents

- 1. Introduction 1**
 - 1.1 Visual Impressions and Optics 1
 - 1.2 Imaging in the Eye and Optical Recording 3
 - 1.3 Digital and Holographic Recording 5
 - 1.4 Recording Time and Data Rate 5
 - 1.5 Storage Capacity 7
 - 1.6 Applications of Real Time Optical Recording 7

- 2. The Principles of Optical Recording 18**
 - 2.1 The Invention of Photography and Real Time Recording 18
 - 2.2 Optical Recording Processes 22
 - 2.3 Survey of Optical Recording Media and Their Uses 23
 - 2.4 Holography 25
 - 2.4.1 Recording and Readout 25
 - 2.4.2 Hologram Classifications 27
 - 2.4.3 Diffraction Efficiency 31
 - 2.4.4 Resolution and Storage Capacity 34
 - 2.4.5 Holographic Optical Elements 38
 - 2.5 Light Sensitivity of Recording Materials 40

- 3. Lasers, Nonlinear Optics
and Photoelectric Detectors 45**
 - 3.1 Absorption and Emission of Light 45
 - 3.2 Lasers 50
 - 3.2.1 Population Inversion 50
 - 3.2.2 Principle of Operation 51
 - 3.3 Nonlinear Optics 59
 - 3.3.1 Nonlinear Absorption 62
 - 3.3.2 Second Order Polarization 64
 - 3.3.3 Second Harmonic Generation and Phase Matching 67
 - 3.4 Light Modulation 70
 - 3.4.1 Electro-Optic Modulators 70
 - 3.4.2 Magneto-Optic Modulators 77
 - 3.4.3 Acousto-Optic Modulators 78
 - 3.5 Photoelectric Detectors 83

4. Photoinduced Processes	
in Optical Recording Materials	88
4.1 Inorganic Photochromic Crystals	88
4.1.1 Light Induced Charge Transfer Reactions	91
4.1.2 Anisotropic Photochromic Effect	91
4.1.3 Light Induced Aggregation of F-Centers	93
4.1.4 Phase Hologram Recording in Photochromic Materials	94
4.2 Photorefractive Materials	96
4.2.1 The Mechanisms of Photorefraction in Ferroelectrics	98
4.2.2 Optical Recording in LiNbO_3	106
4.2.3 Recording of Phase Holograms	107
4.3 Chalcogenide Semiconductors	110
4.3.1 Atomic Structure	111
4.3.2 Electronic Structure	115
4.3.3 Photoinduced Processes	118
4.3.4 Optical Recording	122
4.3.5 Holographic Recording	124
4.4 Organic and Polymer Materials	132
4.4.1 Camphorquinone	132
4.4.2 Bacteriorhodopsin	133
4.4.3 Reoxan	135
4.4.4 Thermoplastic Recording Media	137
4.5 Persistent Spectral Hole Burning	139
4.5.1 Frequency Domain Optical Storage	139
4.5.2 Time-Domain Holography	141
5. Digital Recording on Optical Memory Discs	144
5.1 Commonly Available Optical Memory Discs	144
5.1.1 Multilayered Recording Media	146
5.1.2 Components of the Recording and Reading System	148
5.2 Photothermal Recording	150
5.2.1 Irreversible Recording in Tellurium Compounds	152
5.2.2 Reversible Recording in Tellurium Compounds	154
5.2.3 Photothermal Recording in Antimony Compounds	159
5.2.4 Magneto-Optic Recording	165
5.3 Light Stimulated Recombination Luminescence	169
6. Summary and Looking Ahead	172
