|                                                        |           |
|--------------------------------------------------------|-----------|
| <b>1. Quantum Hall Effect: The Basics</b>              | <b>1</b>  |
| 1.1 Two-Dimensional Electron Gas                       | 1         |
| 1.2 Electrons in a Strong Magnetic Field               | 4         |
| <b>2. Integral Quantum Hall Effect</b>                 | <b>8</b>  |
| 2.1 Experimental Work                                  | 8         |
| 2.2 Classical Hall Effect                              | 11        |
| 2.3 Quantum Mechanical Approach                        | 11        |
| 2.4 Integral Quantization: Theoretical Work            | 12        |
| 2.5 Kubo Formula Approach                              | 13        |
| 2.6 The Gauge Invariance Approach                      | 15        |
| 2.7 The Topological Invariance Approach                | 17        |
| <b>3. Other Developments</b>                           | <b>20</b> |
| 3.1 Electron Localization in the Quantum Hall Regime   | 20        |
| 3.2 Renormalization Group Approach                     | 22        |
| 3.3 Current-Carrying Edge States                       | 24        |
| 3.4 Transport in Edge Channels and Other Topics        | 26        |
| <b>4. Fractional Quantum Hall Effect: Introduction</b> | <b>32</b> |
| <b>5. Ground State</b>                                 | <b>39</b> |
| 5.1 Finite-Size Studies: Rectangular Geometry          | 39        |
| 5.2 Laughlin's Theory                                  | 45        |
| 5.3 Spherical Geometry                                 | 53        |
| 5.4 Monte Carlo Results                                | 58        |
| 5.5 Reversed Spins in the Ground State                 | 61        |
| 5.6 Finite Thickness Correction                        | 64        |
| 5.7 Liquid-Solid Transition                            | 66        |
| 5.8 Magnetoluminescence                                | 71        |
| <b>6. Elementary Excitations</b>                       | <b>87</b> |
| 6.1 Quasiholes and Quasiparticles                      | 88        |
| 6.2 Finite-Size Studies: Rectangular Geometry          | 97        |
| 6.3 Spin-Reversed Quasiparticles                       | 99        |

|                            |                                                                                   |            |
|----------------------------|-----------------------------------------------------------------------------------|------------|
| 6.4                        | Spherical Geometry .....                                                          | 103        |
| 6.5                        | Monte Carlo Results .....                                                         | 105        |
| 6.6                        | Experimental Investigations of the Energy Gap .....                               | 113        |
| 6.7                        | Fractional Statistics and the Anyons .....                                        | 120        |
| 6.8                        | The Hierarchy: Higher Order Fractions .....                                       | 131        |
| 6.9                        | Tilted-Field Effects and Reversed-Spin States .....                               | 144        |
| <b>7.</b>                  | <b>Collective Modes: Intra-Landau Level .....</b>                                 | <b>162</b> |
| 7.1                        | Finite-Size Studies: Spherical Geometry .....                                     | 162        |
| 7.2                        | Rectangular Geometry: Translational Symmetry .....                                | 163        |
| 7.3                        | Spin Waves .....                                                                  | 173        |
| 7.4                        | Single Mode Approximation: Magnetorotons .....                                    | 177        |
| <b>8.</b>                  | <b>Collective Modes: Inter-Landau Level .....</b>                                 | <b>192</b> |
| 8.1                        | Kohn's Theorem .....                                                              | 192        |
| 8.2                        | Filled Landau Level .....                                                         | 194        |
| 8.3                        | Fractional Filling: Single Mode Approximation .....                               | 199        |
| 8.4                        | Fractional Filling: Finite-Size Studies .....                                     | 203        |
| <b>9.</b>                  | <b>Further Topics .....</b>                                                       | <b>208</b> |
| 9.1                        | Effect of Impurities .....                                                        | 208        |
| 9.2                        | Quantization Condition .....                                                      | 214        |
| 9.3                        | Higher Landau Levels .....                                                        | 221        |
| 9.4                        | Even Denominator Filling Fractions .....                                          | 225        |
| 9.5                        | Multiple Layer Systems .....                                                      | 237        |
| 9.6                        | Nature of Long-Range Order in the Laughlin State .....                            | 240        |
| <b>10.</b>                 | <b>Open Problems and New Directions .....</b>                                     | <b>247</b> |
| <b>Appendices</b>          |                                                                                   |            |
