

Contents

1	Introduction	1
1.1	Autonomous mobile robots	1
1.2	Applications of autonomous mobile robots	4
1.3	Historical overview	7
1.4	Book overview	13
2	Kinematics	15
2.1	Basics	15
2.2	Wheel kinematics	19
2.2.1	Kinematics of a differential drive vehicle	22
2.2.2	Kinematics of an omnidirectional vehicle	23
2.2.3	Kinematics of a vehicle with Mecanum wheels	25
2.2.4	Pose calculation based on velocities	27
2.3	Geometrical solution for vehicle kinematics	28
2.3.1	Differential drive	28
2.3.2	Tricycle drive	30
2.3.3	Ackermann steering	31
2.3.4	Double Ackermann steering	32
2.3.5	Synchro drive	34
2.3.6	Omnidrive	35
2.4	Applying mobile robot kinematics	37
3	Sensors	39
3.1	Tactile sensors	40
3.1.1	Switches	40
3.1.2	Bumper	40
3.1.3	Force sensors	41
3.2	Pose measurement	42
3.2.1	Odometry sensors	42
3.2.2	Compass	44
3.2.3	Inclinometers	44
3.3	Sensors for inertial systems	46

3.3.1	Acceleration sensors	46
3.3.2	Turning rate sensors	50
3.4	Distance sensors	55
3.4.1	Infrared sensors	56
3.4.2	Ultrasonic sensors	58
3.4.3	Correlation of ultrasound signals	60
3.4.4	Laser sensors	63
3.5	Vision sensors	66
3.5.1	CCD camera	66
3.5.2	CMOS camera	66
3.5.3	Stereo-camera systems	66
4	Localization	73
4.1	Pose calculation from odometry	73
4.2	Inertial measurement units (IMU)	76
4.2.1	Simplified inertial calculation	78
4.2.2	Implementation example with heuristics for absolute orientation measurement	80
4.3	Localization based on optical flow	83
4.4	Feature extraction from laser radar data	86
4.4.1	Obstacles	86
4.4.2	Line extraction	86
4.5	Landmarks	90
4.5.1	Natural landmarks	90
4.5.2	Artificial landmarks	90
4.5.3	Triangulation using landmarks	90
4.5.4	Measuring distances to artificial landmarks	94
4.5.5	Artificial active landmarks	95
4.6	Global positioning system (GPS)	99
4.7	Kalman filter	100
4.7.1	General idea	101
4.7.2	Guessing error	102
4.7.3	Example application	103
5	Mapping	106
5.1	Metrical maps	108
5.1.1	Line based metrical maps	108
5.1.2	Plane based metrical maps	113
5.1.3	Feature-based metrical maps	119
5.2	Grid maps	126
5.2.1	Occupancy grid maps	127

5.3	Sector maps	129
5.4	Topological maps	134
5.4.1	Growing neural gas net	137
5.5	Hybrid maps	143
6	Simultaneous localization and mapping (SLAM)	146
6.1	The general approach	146
6.2	Merging local maps	148
6.2.1	Correlation of laser scans	149
6.2.2	Correlation of point clouds	153
6.2.3	Loop closing	158
6.3	Probabilistic methods	159
6.3.1	An uncertainty model	159
6.3.2	SLAM as Bayesian network	160
6.3.3	The path estimator	162
6.3.4	The landmark estimators	163
6.3.5	Numeric computation of FastSLAM	164
6.4	Exploration of the environment	169
7	Navigation	173
7.1	Global path planning	173
7.1.1	A*-algorithm	173
7.1.2	Solving a maze	178
7.1.3	Back tracking algorithm	178
7.2	Local path planning	181
7.2.1	Path planning on geometric maps	181
	Large free space	182
	Narrow free room	186
7.2.2	Navigation on a raster map	193
7.2.3	Quadtree based path planning	196
7.2.4	Area covering paths	197
7.2.5	Exploration	201
7.2.6	Obstacle avoidance	203
7.2.7	Potential field method	206
7.2.8	Basic abilities	208
7.3	Path control	218
8	Control Architectures	222
8.1	The hierarchical task-oriented control architecture RCS	224
8.2	Behavior-based control architectures	227
8.2.1	The Subsumption Architecture	229

8.2.2	Reuse and temporal sequences of behaviors	231
8.3	The integrated behavior-based control architecture iB2C .	232
8.3.1	The basic behavior module	233
	Example behavior <i>Turn to object</i>	236
8.3.2	Fusion behavior module	236
	Maximum fusion (winner takes all)	238
	Weighted fusion	238
	Weighted sum fusion	239
8.3.3	Behavior interaction	240
8.3.4	Behavior coordination	241
8.3.5	Design guidelines	243
8.3.6	Analysis of iB2C networks	246
9	Software frameworks	249
9.1	The Player Project	250
9.2	Microsoft Robotics Developer Studio	253
9.3	Orca	257
9.4	MCA – Modular Controller Architecture	261
9.5	Summary and comparison of robotic frameworks	264
	Bibliography	267
	Index	280
