

CONTENTS

I - Continuum Mechanics

a - Liquid crystals

Y. Bouligand : Clusters of singularities in liquid crystals	3
M.-C. Calderer : Stability analysis of flows of liquid crystal polymers exhibiting a banding structure	10

b - Elastic crystals

S. Cadet : Coupled transverse-longitudinal solitons in elastic crystals	22
C. Collins, M. Luskin : The computation of the austenitic-martensitic phase transition	34
R. James, D. Kinderlehrer : Theory of diffusionless phase transitions	51

c - Fluids

P. Casal, H. Gouin : Invariance properties of inviscid fluids of grade N	85
M.E. Gurtin : On diffusion in two-phase systems : the sharp interface versus the transition layer	99
B.J. Plohr : Instabilities in shear flow of viscoelastic fluids with fading memory	113

d - General theory

M. Kléman : Singularities of the order parameter in condensed matter physics	128
I. Müller : Swelling and shrinking of polyelectrolyte gels	138
P.A. Thompson, G.E.A. Meier : Adiabatic phase changes, fast and slow	146

II - Mathematical Analysis

a - Systems of conservation laws

J. Glimm : The continuous structure of discontinuities	177
M. Shearer, S. Schecter : Riemann problems involving undercompressive shocks	187
M. Slemrod : The viscosity-capillarity approach to phase transitions	201

b - Miscellaneous topics

J.M. Ball : A version of the fundamental theorem for Young measures	207
J. Carr, R.L. Pego : Very slow phase separation in one dimension	216

List of Participants	227
