Preface	v
1 Core and Valence Regions of Atoms	1
1.1 The Hartree–Fock approximation	1
1.2 Inner and outer atomic regions	4
1.3 Hartree–Fock–Roothaan orbitals	7
1.4 The valence region energy	10
1.5 Meaningful valence regions	15
1.6 Numerical examples	18
1.7 Configuration interaction calculations	23
1.8 Alternate energy formula	26
1.9 Summary	27
2 The Valence Region of Molecules	31
2.1 Scope	31
2.2 Basic formulas	32
2.3 The atom in a molecule. Binding	34
2.4 Core–valence partitioning of molecules	36
2.5 The valence region energy	38
2.6 Perturbation of the valence region	40
2.7 Conclusion	42
3 The Chemical Bond	43
3.1 Introduction	43
3.2 Bonded and nonbonded interactions	44
3.3 Reference bonds	47
3.4 The chemical bond	49
3.5 Theoretical vs. empirical bond energies	55

3.6	Valence atomic orbital centroids	57
3.7	The calculation of pi systems	62
3.8	Conjugation	63
3.9	Summary	65
4	Bond Dissociation Energies	69
4.1	Scope	69
4.2	Theory	70
4.3	Applications	75
4.4	Generalization	80
4.5	Conclusions	83
5	Electronic Charge Distributions	85
5.1	Introduction	85
5.2	Mulliken's population analysis	86
5.3	Generalized population analysis	88
5.4	Configuration interaction calculations	90
5.5	Charge analysis of simple alkanes	92
5.6	Charge analyses using NMR shifts	99
5.7	Selected reference atomic charges	105
5.8	Assessment	107
6	Applications	113
6.1	Introduction	113
6.2	Basic theoretical parameters	114
6.3	Basic functions	118
6.4	Nonbonded interactions	124
6.5	Saturated hydrocarbons	125
6.6	Unsaturated hydrocarbons	130
6.7	Ethers and Carbonyl compounds	139
6.8	Concluding comments	143
7	Assessment	149
A	The Comparison with Experiment	153
A.1	Thermochemical formulas	153
A.2	Zero-point and heat-content energies	155
A.3	Concluding remarks	165
