Dedication	XXI
Preface	XXIII

Introduction

Chromosomes yesterday: a century of chromosome studies <i>Ernesto Capanna</i>	3
--	---

Part one: Chromosome organisation

The prometaphase bands of human chromosomes: compositional features and gene distribution <i>Giorgio Bernardi, Concetta Federico and Salvatore Saccone</i>	25
--	----

The functional and structural organization of <i>Drosophila</i> heterochromatin <i>Sergio Pimpinelli</i>	29
--	----

RNA, genes, genomes and chromosomes: repetitive DNA sequences in plants <i>J.S. (Pat) Heslop-Harrison</i>	45
---	----

Color plates I–VII

Non-B DNA structures spatially and sequence-specifically associated with individual centromeres in the human interphase nucleus <i>Mizuki Ohno, Toyooki Tenzen, Yoshihisa Watanabe,</i> <i>Tetsushi Yamagata, Shigehiko Kanaya and Toshimichi Ikemura</i>	57
--	----

Part two: Chromosome function and behaviour

Chromosomes in mitosis: chance and checkpoint <i>R. Bruce Nicklas</i>	73
--	----

Genetic control of B chromosome transmission in maize and rye <i>María J. Puertas, Guillermo Jiménez, Silvia Manzanero, Mauricio A. Chiavarino, Marcela Rosato, Carlos A. Naranjo and Lidia Poggio</i>	79
---	----

Igf2 imprinting in development and disease <i>Wolf Reik, M. Constanica, W. Dean, K. Davies, L. Bowden, A. Murrell, R. Feil, J. Walter and G. Kelsey</i>	93
--	----

Part three: Meiosis

Seeing meiotic chromosomes without seeing them <i>Nancy Kleckner</i>	107
---	-----

Meiosis in budding yeast and in multicellular eukaryotes – similarities and differences <i>Josef Loidl</i>	123
--	-----

Meiotic pairing sites and genes involved in segregation of the X and Y chromosomes of <i>Drosophila melanogaster</i> <i>Bruce D. McKee, Chia-sin Hong and Siuk Yoo</i>	139
--	-----

Part four: Chromosome evolution

Genome evolution in <i>Triticeae</i> <i>Belén Maestra and Tomás Naranjo</i>	155
--	-----

Karyotypic evolution in Neotropical freshwater fish <i>Lurdes F. de Almeida-Toledo, Fausto Foresti and Silvio de A. Toledo-Filho</i>	169
---	-----

Repetitive DNA as a tool to study the phylogeny of cold-blooded vertebrates <i>Teresa Capriglione</i>	183
---	-----

Comparative gene mapping permits new insights into karyotype evolution in mammals <i>Günther Rettenberger, Walther Vogel and Horst Hameister</i>	195
--	-----

Color plates VIII–X

Part five: Medical and cancer cytogenetics

Chromosome and gene alterations in human cancers in relation to aging <i>Bernard H. Dutrillaux</i>	207
---	-----

Xp contiguous gene syndromes: from clinical observation to disease gene identification <i>Brunella Franco and Andrea Ballabio</i>	225
---	-----

Genetic and cytogenetic studies in inherited cancer: Li-Fraumeni syndrome <i>Jennifer M. Varley, John M. Boyle, Louise A. James, Gail McGown, Mary Thorncroft, Martin Greaves, Anna M. Kelsey, D. Gareth R. Evans and Jillian M. Birch</i>	245
--	-----

Color plates XI–XVIII

Part six: Mapping and new methods

Comparative chromosome painting <i>Malcolm A. Ferguson-Smith, Patricia C.M. O'Brien, Willem Rens and Fengtàng Yang</i>	259
---	-----

High resolution FISH reveals the molecular and chromosomal organisation of repetitive sequences of individual tomato chromosomes <i>J. Hans de Jong, X.-B. Zhong, P.F. Fransz, J. Wennekes-van Eden, E. Jacobsen and P. Zabel</i>	267
---	-----

Species relationships, introgression and physical mapping in <i>Lolium</i> <i>perenne</i> × <i>Festuca pratensis</i> hybrids <i>Ian P. King, W.G. Morgan, I.P. Armstead, J. King, T.A.H. Jones, J.V. Nash, R.N. Jones, J.A. Harper, L.A. Roberts, Steve Taylor and H.M. Thomas</i>	277
--	-----

Smallness: gain and loss in plant chromosome research <i>Kiichi Fukui, Nobuko Ohmido and Toshiyuki Wako</i>	287
--	-----

Conclusion

The future of chromosomes <i>Herbert C. Macgregor</i>	305
--	-----
