

|            |                                                                                               |            |
|------------|-----------------------------------------------------------------------------------------------|------------|
| <b>1</b>   | <b>Introduction .....</b>                                                                     | <b>1</b>   |
| <b>2</b>   | <b>Definitions .....</b>                                                                      | <b>3</b>   |
| <b>3</b>   | <b>Mode of operation.....</b>                                                                 | <b>7</b>   |
| <b>3.1</b> | <b>Fundamentals of distance protection.....</b>                                               | <b>7</b>   |
| 3.1.1      | Concept .....                                                                                 | 7          |
| 3.1.2      | Relay impedance (secondary impedance) .....                                                   | 8          |
| 3.1.3      | Impedance diagram .....                                                                       | 9          |
| 3.1.4      | Distance measurement .....                                                                    | 11         |
| 3.1.5      | Directional measurement .....                                                                 | 14         |
| 3.1.6      | Starting (fault detection) .....                                                              | 15         |
| 3.1.7      | Distance zones (steps).....                                                                   | 27         |
| 3.1.8      | Zone- and timer-control.....                                                                  | 30         |
| 3.1.9      | Switched and non-switched distance protection.....                                            | 32         |
| 3.1.10     | Distance protection with signalling channels.....                                             | 36         |
| 3.1.11     | Power swing blocking, power swing tripping (out of step protection) .....                     | 48         |
| 3.1.12     | Distance protection with automatic reclosure .....                                            | 53         |
| 3.1.13     | Distance to fault locator.....                                                                | 61         |
| 3.1.14     | Grading chart .....                                                                           | 64         |
| <b>3.2</b> | <b>Numerical distance measurement.....</b>                                                    | <b>76</b>  |
| 3.2.1      | Definition of the fault loop .....                                                            | 76         |
| 3.2.2      | Determination of the loop impedance .....                                                     | 80         |
| 3.2.3      | Numerical impedance computation .....                                                         | 82         |
| <b>3.3</b> | <b>Numerical directional determination (polarisation) .....</b>                               | <b>90</b>  |
| 3.3.1      | Method of direction-determination with unfaulted phase voltages<br>(cross-polarisation) ..... | 90         |
| 3.3.2      | Directional characteristic in the impedance plane.....                                        | 93         |
| 3.3.3      | Selection of the unfaulted loop voltage .....                                                 | 95         |
| 3.3.4      | Influence of load transfer .....                                                              | 97         |
| 3.3.5      | Implementation of voltage-memory (-ies) .....                                                 | 100        |
| <b>3.4</b> | <b>Circular characteristics with numerical technology ....</b>                                | <b>101</b> |
| 3.4.1      | MHO-circle.....                                                                               | 101        |
| 3.4.2      | Polarised MHO-characteristic .....                                                            | 103        |
| 3.4.3      | Load influence on polarised MHO-circles .....                                                 | 106        |

|            |                                                              |            |
|------------|--------------------------------------------------------------|------------|
| 3.4.4      | MHO-circle with voltage memory.....                          | 108        |
| <b>3.5</b> | <b>Distance measurement, Influencing quantities.....</b>     | <b>110</b> |
| 3.5.1      | Fault resistance .....                                       | 110        |
| 3.5.2      | Intermediate in-feeds.....                                   | 131        |
| 3.5.3      | Parallel lines .....                                         | 135        |
| 3.5.4      | Distance protection for transformers.....                    | 149        |
| 3.5.5      | Non-symmetry of the line .....                               | 160        |
| 3.5.6      | Series-compensation .....                                    | 170        |
| <b>4</b>   | <b>Device design.....</b>                                    | <b>179</b> |

| 5.1.2      | Shortest line length.....                                    | 189        |
| 5.1.3      | Tripping time.....                                           | 191        |
| 5.1.4      | Teleprotection, choice of technique.....                     | 193        |
| 5.1.5      | Instrument transformer requirements .....                    | 196        |
| 5.1.5.1    | Current-transformers .....                                   | 196        |
| 5.1.5.2    | Voltage transformers .....                                   | 214        |
| <b>5.2</b> | <b>Distance protection in the distribution system.....</b>   | <b>222</b> |
| 5.2.1      | General .....                                                | 222        |
| 5.2.2      | Distance protection in isolated or compensated systems ..... | 229        |

5.2.3 Distance protection in distribution networks with low impedance  
star-point earthing ..... 236

5.2.4 Distance protection in industrial networks ..... 239

**5.3 Distance protection in transmission networks ..... 241**

5.3.1 Generals aspects ..... 241

5.3.2 Protection concepts..... 245

5.3.2.1 High-voltage overhead lines..... 245

5.3.2.2 EHV-line ..... 247

5.3.2.3 1 ½ circuit-breaker sub-stations..... 249

5.3.2.4 Ring busbar ..... 251

5.3.2.5 Double circuit line ..... 252

5.3.2.6 Three-terminal line ..... 253

5.3.2.7 Series-compensated lines..... 253

**6 Protection settings.....257**

**6.1 General aspects ..... 258**

**6.2 Fault detection..... 258**

6.2.1 Security of the fault detection ..... 258

6.2.2 Phase-selectivity ..... 259

6.2.3 Setting of the  $U-I-\phi$  fault detection ..... 260

6.2.4 Setting of the impedance fault detection ..... 261

**6.3 Setting of the distance zones..... 266**

6.3.1 Reach (X-setting) and grading time ..... 266

6.3.2 Arc compensation (R-setting) ..... 268

6.3.3 Specifics for the zone settings in cable networks ..... 272

6.3.4 Adjusting the zone reach in case of large R/X-setting..... 274

6.3.5 Grading of circle and polygonal characteristic..... 276

6.3.6 Setting of the power swing blocking ..... 276

**7 Calculation examples.....281**

**7.1 Double circuit lines in earthed systems ..... 281**

**7.2 Three ended lines (teed feeders) ..... 289**
