

Contents

Introduction	1
1 Vector Machines	4
1.1 Introduction	4
1.2 Vector Machines: Definition and Basic Properties	5
1.3 Elementary Matrix Algebra on Vector Machines	11
1.4 Relation Between Vector Machines and Turing Machines	21
1.5 Exercises	29
1.6 Bibliographical Remarks	32
2 The Parallel Computation Thesis	33
2.1 Introduction	33
2.2 An Array Machine: the APM	34
2.3 A Multiprocessor Machine: the SIMDAG	39
2.4 A Tree Machine: the k -PRAM	46
2.5 Further Parallel Models	52
2.6 Exercises	57
2.7 Bibliographical Remarks	61
3 Alternation	63
3.1 Introduction	63
3.2 Alternating Turing Machines	63
3.3 Complexity Classes for Alternation	70
3.4 Computation Graphs of a Deterministic Turing Machine	78
3.5 Determinism Versus Nondeterminism for Linear Time	88
3.6 Exercises	91
3.7 Bibliographical Remarks	94
4 Uniform Circuit Complexity	97
4.1 Introduction	97
4.2 Uniform Circuits: Basic Definitions	97
4.3 Relationship with General-Purpose Parallel Computers	103
4.4 Other Uniformity Conditions	108

4.5	Alternating Machines and Uniformity	110
4.6	Robustness of NC and Conclusions	115
4.7	Exercises	115
4.8	Bibliographical Remarks	117
5	Isomorphism and NP-completeness	119
5.1	Introduction	119
5.2	Polynomial Time Isomorphisms	119
5.3	Polynomial Cylinders	122
5.4	Sparse Complete Sets	125
5.5	Exercises	131
5.6	Bibliographical Remarks	132
6	Bi-Immunity and Complexity Cores	134
6.1	Introduction	134
6.2	Bi-Immunity, Complexity Cores, and Splitting	134
6.3	Bi-Immune Sets and Polynomial Time m -Reductions	136
6.4	Complexity Cores and Polynomial Time m -Reductions	139
6.5	Levelability, Proper Cores, and Other Properties	143
6.6	Exercises	146
6.7	Bibliographical Remarks	147
7	Relativization	149
7.1	Introduction	149
7.2	Basic Results	150
7.3	Encoding Sets in NP Relativized	154
7.4	Relativizing Probabilistic Complexity Classes	156
7.5	Isolating the Crucial Parameters	162
7.6	Refining Nondeterminism	165
7.7	Strong Separations	168
7.8	Further Results in Relativizations	172
7.9	Exercises	174
7.10	Bibliographical Remarks	176
8	Positive Relativizations	178
8.1	Introduction	178
8.2	A Positive Relativization of the $P \stackrel{?}{=} PSPACE$ Problem	180
8.3	A Positive Relativization of the $NP \stackrel{?}{=} PSPACE$ Problem	184
8.4	A Positive Relativization of the $P \stackrel{?}{=} NP$ Problem	186
8.5	A Relativizing Principle	192
8.6	Exercises	196
8.7	Bibliographical Remarks	197

9	The Low and the High Hierarchies	199
9.1	Introduction	199
9.2	Definitions and Characterizations	200
9.3	Relationship with the Polynomial Time Hierarchy	202
9.4	Some Classes of Low Sets	204
9.5	Oracle-Restricted Positive Relativizations	209
9.6	Lowness Outside NP	213
9.7	Exercises	215
9.8	Bibliographical Remarks	217
10	Resource-Bounded Kolmogorov Complexity	219
10.1	Introduction	219
10.2	Unbounded Kolmogorov Complexity	220
10.3	Resource-Bounded Kolmogorov Complexity	222
10.4	Tally Sets, Printability, and Ranking	225
10.5	Kolmogorov Complexity of Characteristic Functions	230
10.6	Exercises	232
10.7	Bibliographical Remarks	233
11	Probability Classes and Proof-Systems	235
11.1	Introduction	235
11.2	Interactive Proof-Systems: Basic Definitions and Examples	235
11.3	Arthur Against Merlin Games	240
11.4	Probabilistic Complexity Classes and Proof-Systems	241
11.5	Equivalence of AM and IP	251
11.6	Exercises	253
11.7	Bibliographical Remarks	254
	Appendix: Complementation via Inductive Counting	257
1	Nondeterministic Space is Closed Under Complement	257
2	Bibliographical Remarks	262
	References	263
	Author Index	274
	Symbol Index	277
	Subject Index	280
