

Contents

Chapter 1. An Introduction to Zeta Functions by P. Cartier	1
Chapter 2. Introduction to Compact Riemann Surfaces, Jacobians, and Abelian Varieties by J.-B. Bost	64
Chapter 3. Elliptic Curves by H. Cohen	212
Chapter 4. Introduction to Modular Forms by D. Zagier	238
Chapter 5. Decorated Elliptic Curves: Modular Aspects by R. Gergondey	292
Chapter 6. Galois Theory, Algebraic Number Theory, and Zeta Functions by H. M. Stark	313
Chapter 7. Galois Theory for Coverings and Riemann Surfaces by E. Reyssat	394
Chapter 8. Differential Galois Theory by F. Beukers	413
Chapter 9. p-adic Numbers and Ultrametricity by G.Christol	440
Chapter 10. Introduction to Lattice Geometry by M. Senechal	476
Chapter 11. A Short Introduction to Quasicrystallography by A. Katz	496
Chapter 12. Gap Labelling Theorems for Schrödinger Operators by J. Bellissard	538
Chapter 13. Circle Maps: Irrationally Winding by P. Cvitanović	631
Chapter 14. An Introduction to Small Divisors Problems by J. -C. Yoccoz	659
Index	680
